I think you've posted under these handles:

Compania
RadioFan
rick@aol.com
reallybigguy.com

phil@webtv.com
BAYCITVIDGRP

And a host of other ID's that I can't even remember. Then there's the cancels you were involved with at Clark Community College, WA. Compute mileage and travel time between Beaverton OR and Clark Community College, WA. You lived within a half hour drive to the source of those cancels. They were primarily directed at Bill Cheek and other critics of *you* John.

It's one of two things: It was you...or.....it was someone even loonier than you that you've convinced to carry out your bidding.

But you're very loony John. As loony as they come. The slim chance of a loonier "Igor" in your service indicates that it's far more likely, that *you* are the source of the forges and cancels.

But that's just my opinion;

You friggin' loon.

This weenie is a true masochist ......

O K A Y - Here Ya Go Again:

A N O T H E R R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0
OCT 97	48	60	0	0	8	0	0
SEP 97	181	78	0	2	4	0	0
AUG 97	29	2	0	1	2	0	0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX. We do not believe this to be a coincidence ....

Hello,

I'd like to get into one of these units, pref. The AOR. (Because it has SSB.)

I have a Standard C558A dual band HT to trade. I would also be willing to sell it for $375 if anyone would like to buy it. It's got the ext. memory chip, and drop in rapid charger. Further details upon request.

Please email me if interested in some kind of deal.

73,

Nate.

There was a case of someone doing this (ripping off) on the CB newsgroup.
He eventually received a package bomb that killed him and seriously injured
his mother. Sometimes its the rip off artist that needs to beware.

Not a bad trick John, using MCI as your ISP. MCI is no longer an ISP.
They were bought by Cable & Wireless 2 months ago. I should know, I used
MCI till they were bought, now I use Cable & Wireless. Too bad you don't
know who your ISP is.

Mike

2024. New Low Cost PCs used with scanners was Re: winradio external OR isa

Newsgroup: rec.radio.scanner
Date: 1998-10-23 00:00:00 UTC
From: Victor Healey <fourphun@bellsouth.net>
Message-ID: <D72Y1.1257$Tn4.2204535@news3.atl.bellsouth.net>
Source record: 140683
Cross-posted to: alt.radio.scanner,rec.radio.scanner

From: "Victor Healey" commenting on qery on new PCs this fall.

If you had been subscribing to the 4phun mailing lists on onelist.com you would have read about them before you saw the article in the papers. People who complain their computer is too slow to handle Win98 and HTML need to look at these as was mentioned there a week ago. Best Buys, MicroCenter and CompUSA ahve signed contracts to carry these type of computers. MicroCenter already has one around $500 on the shelf. Best Buys gets theirs mid Nov.

There will be one from Korea that looks like the Apple Imac but it runs Win98 and PC software.
Price is to be less then $600.

These are 32 MB machines with part of the memory used for video so you effectively have 28.5 MB for programs. The first ones will be based on Cyrix CPUs newer ones will be based on Intel CPU Celeron. They come with a smallish 2.5 gig hard drive and cdrom drive. They usually have a 14 inch monitor which is a joke when you can buy a nice 17 inch monitor today for $250 to $300. They make good second or third computers and of course for some a nice entry PC.

Change is so rapid and cost is dropping so fast that soon PCs will cost by 2002 about as much as a high quality coffee maker or microwave. When the current one has outlived its usefulness one wit said they could go to the attic and you could buy a better one.

They will be a lot smaller then today's PC in size and you will not be using things like ISA cards to expand their capabilities. There will be no ISA or many of the other obsolete features you currently have on these older PCs. Expansion products will be on an external bus. This is important to note as mentioned six months ago when considering the purchase of any radio hardware for your PC.
Buy the external product or look else where. Why buy a product that costs as much as a new computer and not be able to use it with one? DUMBBO!

One of the 4phun list is for scanning and other communications related discussions so if you get MSIE 4.1 or Netscape 4.5 running with at least a 28.8 net connection pop over and subscribe using this URL http://www.onelist.com/subscribe.cgi/4phun-scanning and you will be the first to hear about breaking news.

4phun-scanning is now a restricted list and you will have to wait for approval before receieving email or posting privileges. Since we have five moderators that should not take to long.

Yesterday we had a post that mentioned using the ICOM PCR1000 with a fast computer.
Here is the plain text portion of part of that post...
.....
Thanks for the list Victor.
I have put it to immediate use, as a local bank was held up and a manhunt went on for several hours, with lots of S.O. traffic and occasional FBI.
The bad guys got away.

And here's another one I have just heard:
Of note are 167.225 and 167.312.
These two frequencies have been active for several hours now, and involve another situation somewhere _offshore_ from SoCal.
The FBI has been tailing some bad guys and have enlisted the CG to help apprehend them.
Now Code 4, with four in custody.
Look for this one on the news, as they stated that at least two persons were being held with bicycle lock cables around their necks.
What this one is all about, I have no idea.
Stay tuned.

P.S. I couldn't have heard this if it wasn't for Jim Springer's Scancat Magic conversion program, which allowed me to convert your HTML page to xxx.frq listing for instant use with my Scancat Gold SE and Icom PCR-1000.
Took less than 3 minutes to do the conversion.
ttb2
.....

Using HTML we can at 4phun-scanning post frequencies in chart form just like a Excel 97 spreadsheet with all the font and color formatting (foreground and background per cell) except we can not post text rotated to an angle which is an Excel feature.

It is easy for people who have an existing web page to post it to our list subscribers. This is great for those who have spent a lot of time on creating a scanning web page and who want interactive feedback from 200 or more people with a similar interest.

BTW I discovered that those who use Juno for free email and can't read all of 4phun-scanning because we have file attachments, there is a much better free email program from http://MEMBERS.HOTBOT.COM/ It allows you to send and receive email up to 2 MB in size, you can have attachments and it displays the HTML from 4phun properly. Subscribe using hotbot.com as your mailing address if needed.
Here is the URL for news about this new service.

HotBot offers free email, web page building

Subject: Anyone know anything about new EMachine computers?

The other day on TV I saw a news report that EMachines is coming out with a full features 300Mhz computer with monitor for $400 within the next two months. Does anyone know if these computers will be of any use to scannerists? Take care - Peter S zerg90@hotmail.com

An customizing this repost for Bud and others behind the times.
You will be SOL with your new WinRadio ISA card and a new PC.
Sorry but I told you and you wanted to argue. ;>)

A good percentage of those who buy
scanner radios have to. There is no
choice. They either have one or they
lose big-time.

Not to have a scanner for these people
is not having their pants on
when crossing in front of a
nunnery...downright entertaining
a thoght.

Some percentage need them to derive income
from. To report what is happening
in a city, town or municipality.

The PRESS cannot do without them. Period.

Also, the new radios coming out with digital
will be offered to the PRess costing 2500
bucks per radio they use.

Not only is it expensive as a hobby which
will eliminate a lot of people from
this market, but those who can afford
it will be in a "select-few" designate
are.

Seems every time a new form of "radio system"
is born...they come up with a radio that is
able to hear...in time...for a price twice
what they cost for the last system....

then everyone rushes to buy and those that
sell them make tons of money and then the
new system comes to fore and repeated
over again, but with different sales projections
based on the price being double or triple or
more of the last system.

Remember: Bear Cat 300's.... 300 bucks
and all those others
BearCat 760's 400 bucks
and similars 800mg
BearCat 3000 500 bucks
and a few others
BearCat 235xlt/895 400 to 500 originally
now they are below 200

Erickson's for press 1800 originally

New digital's in 1999 2800 per.

How many municipalities will switch over to digital. It's
up in the air.

Why: police departments are buying into the NEXTEL
phone system as a savings system and it works 70
percent good. They have problems. But all they
do is buy the radios and Nextel does the rest.

And no one can listen to them without proper scanner...

bill conduit
etc.

Great scanner...but I have to agree with the other guy...just a little
on the pricey side. I have always wondered how you sell something NIB
when they quit making them years ago? Go figure. Anyways ever who buys
it will have a nice scanner!

ok this is where i would disagree - the pci modems are software uart and no thanks I want a real one - as for the pci sound cards on the market, they are really great if you dont do anything but windows sounds - so I'll still to my USR and AWE64 ISA for a little while longer - I dont think the modem needs more than 500Kps throughput, do you?
and definitely not on the sound card. ISA is not dying thankyou

>I don't see where ANY of your post had anything to do with the topic!

In the 10000 posts you have made this year alone less then 1% had
anything to do with the topic, my percentage is well over 98%.
Anyone wanting to verify this should visit:
http://x12.dejanews.com/dnquery.xp?QRY=*&DBS=1&ST=PS&defaultOp=AND&LNG=ALL&format=terse&sh
owsort=score&maxhits=100&subjects=*&groups=rec.radio.scanner&authors=jma*@*&fromdate=&toda
te=

http://x12.dejanews.com/dnquery.xp?QRY=*&DBS=1&ST=PS&defaultOp=AND&LNG=ALL&format=terse&sh
owsort=score&maxhits=100&subjects=*&groups=&authors=*@parg.org&fromdate=&todate=

And this is not even 50% of your posts! It seems that you have used a
variety of combinations of your e-mail address for some unknown reason

apparently to confuse news filters so I am just estimating the 10000
number and I'm quite sure its low.

>> >I have not created Crudhacker, or any other ID except my own obvious
>> >identity.
>>
>> Bahahaah, dejanews says different!

>
>Please post your proof from Dejanews that you refer to above or be
>proven a liar if you don't.

See above URL's...mind you I only spent 10 minutes collecting them.
That is all the time it takes to see what your agenda in this
newsgroup is, you have become quite pathetic. I would say that you are
the liar here. Cat got your tongue? Have a nice day!

PCI for a modem is a stupid use of resources.
A modem and a bunch of other stuff on the same PCI card may make sense.

But Motorla is combining the modem and the 3D soundcard into three new products for release after xmas.
That is one of the waves of the future as vendors move away from ISA. No new ISA sound card si being desiigned by anyone.
ISA is very much dead but in the minds of those who can't keep much less be aware of what is in the pipleine for hte next few months.
Hello I bet their are people here still looking for VLB parts. That dosn't mean that is is alive and kicking.
It died with the 486.

Michael Champion wrote in message <70qcupskt1@core.savvis.net>...
ok this is where i would disagree - the pci modems are software uart and no thanks I want a real one - as for the pci sound cards on the market, they are really great if you dont do anything but windows sounds - so I'll still to my USR and AWE64 ISA for a little while longer - I dont think the modem needs more than 500Kps throughput, do you?
and definitely not on the sound card. ISA is not dying thankyou

Not likely. Someone has been having you on.

Certainly, one would not need a special radio with a special switch to receive a broadcast station. There are probably multi-cultural FM stations in Chicago that broadcast in different languages at different times of the day.

Sorry, I have no knowledge of the Chicagoland area's radio stations. Perhaps, someone local can advise you.

I would suggest you make a dipole with each section five feet long.

If you have a large window, tape the dipole to it as high up as you can
get it. I have found that it matters little whether the antenna is
vertical or horizontal.

It doesn't matter how thick the wire is. In fact, it can be quite
narrow.

Radio Shacks telecoping antenna is inexpensive and does a pretty good job of picking up phones compared to a factory antenna. It sells for $10. Works great on a handheld or base unit. You can get a right angle adapter and/or a motorola jack adapter if you have a base scanner.

Whether or not one gets answers to their questions at Radio Shack depends on which store(s) in your sales district you happen to go to. About a month and a half ago I was looking for a PRO-2041 base scanner which had recently been discontinued. At the first two Rad Shack stores I stopped at, the sales "droids" checked their computer and said there were no PRO-2041's left in the entire district: Utah, Idaho, Wyoming, Montana, and
Washington as I recall. At the third store I stopped at, the droid checked his computer and said there was a PRO-2041 in stock at another Rad Shack store about 40 miles south.
I told the sales person I was willing to drive the distance to get the scanner if it was still in stock, but for some reason he couldn't get the manager of the store which supposedly had the PRO-2041 in stock to verify that it hadn't been sold, perhaps because he didn't try hard enough to get the info. At the fourth Rad Shack store I stopped at, I hit paydirt. The store manager checked his computer and told me there was a PRO-2041 in stock at another (different) store about 50 miles away. He got the manager of the store which had the

PRO-2041 to verify that the scanner was still in stock and placed a hold on the radio for me. In summary, if you're looking for an item at Rad Shack, especially a recently discontinued item, it pays to check all of the stores in your area. Yes, you will get some blank stares and irrelevant answers to your questions, but you will also find that some Rad Shack employees are willing to go the extra mile to satisfy a customer rather than accept what their inventory computer tells them as gospel. Just my nickle's worth.

I think you may be talking about signals which
are transmitted on 60 - 90 kHz subcarriers "piggybacked"
on top of commercial FM radio stations (88 - 108 MHz).
The Physicians Radio Network is one example.
Book reading services for the blind is another.

You won't be able to receive them with a scanner alone.
You need a subcarrier (SCA) detector.

That premise: extra mile, some of the employees
will for you....

: sucks

That should be the motto of this schizoid store.

"we will go the extra mile for you"

This concept above is indicative of a management by
district consensus. Ludicrous. Let's say the district
is five miles long and five miles wide. and the
next district is six miles long and six miles wide.

you live two feet into district five miles long.

So if you are coming home in district five and
go in and ask QUESTIONS you will get answers different
than district six miles long/wide.

This is what you are alluding to.

That is sick. It's the sickness of Radio Shack
people who think they are running a business. Seems that
no one at RS is in charge so every idiot that works for
the store operates under the same policy and same scripts
as any other district on the earth will.

Stupid think! Questions Not To Ask Droids"

"Help us think. Don't ask us questions"

bill conduit
etc.

hey Buzz brain...that is not the definition of respect.

you diss'd the Cheek guy by your attitude and your
disregard for his genius at knowing about scanners
just because he did not adhere to your stupidity
for saying things as you deemed them "absolutes"

You don't know what respect is because you cannot get
it. What you lack you lash out for and get disdain.

What he is saying is is that you deserve no respect.
And that is the truth with about 99.9 percent of the
people who have to read your crap.

YOu are like a monkey: licking your own ass to get
off on. And then telling us about it.

I speak with Bill Cheeks.

No ass-brain...what i was saying is that
as a source you are the only one who is at
source with you. You missed it by a mile or
more.

You are the ONLY ONE who is in your mirror-image.

YOU are a legend in your own mind-lessness.

No one cares what you think about YOU. And that is
what you seem to love talking about all the time
as you wipe your brain.

...Cheeks don't need you.

You need him. And he ain't' here for you.

he will never be "here" for you.

idiot...

bill conduit
etc.

Hi,

Little more back door Clinton bashing.

In a recent interview, John Cleese was asked what, in comparison to the United States, was so great about Great Britain. He replied: "First we speak English, second when we hold a world sporting championship we invite other countries to participate, and thirdly when we greet our head of state we only are required to go down on one knee."

you would have read this thread!

From jwilson9@erols.com Fri Oct 23 13:59:37 1998
Unfortunately the subject list is quite dated and incorrect for Va.
The FBI no longer uses these frequency schemes. Since all comms. are
DES, the following are confirmed only to be FBI in Va.:
(i) 167.6250/173.9875 mhz. (o) (unknown location)
167.6125 simplex
Unknown/173.8125 (simulcasts on 167.8125 and 163.9375)
167.6250/173.9875 (believed to be northern Va.)
165.8250/172.4250 (Richmond/central Va.)
Unknown/173.9375 (unknown location)

No 400 mhz. activity. The 419.550 mhz. link from Richmond to
Fork Mtn., Va. has been dropped and supposedly a microwave link
is being used.

Perhaps someone else in the group that has a more accurate scheme
for
Va. can post it.

Hello Temp, John, and the list.

After a quick glance at the Healey list, it looks like VA isn't the
only
flawed portion of this list. If Victor is using normal scanner

frequency
notation conventions (output/input), then the list is way out of
synch. The
FBI flipped their 163/167 MHz freqs in the early 1990s (prior to
1994). The
167 MHz bands are now the simplex/repeater outputs/talk arounds and
the 163
MHz freqs are the repeater inputs. Based on reports we have received
here it
would appear that all FBI districts now conform to this new frequency
scheme. The Healey list would indicate that the 163 MHz freqs are
inputs and
167 MHz are outputs and this simply is not the case nationwide. Very
few
portions of the country appear to have any of the UHF links left in
place.
It has been reported that they moved those functions into the
microwave
region of the spectrum.

Have a great day all,

Larry Van Horn

Ooooppssss. I should have said:

The Healey list would indicate that the 167 MHz freqs are inputs and
163 MHz are outputs and this simply is not the case nationwide.

Now that sounds better!!!

I think that Bob is right. One option is to install a discriminator pick up in your receiver and attach an SCA detector to that. You could also try to find and old "Muzak" receiver and tune it to the host station. What I do is take the IF output from my ICOM R-7000 and feed it to the IF of an old "Muzak" receiver. That allows me to rapidly tune through the FM band and find all of the SCA material. Some SCA is even data. A few years ago "Lotus Signal" used to supply stock quotes that way.

2078. Civil Aviation Log/Radar View: North Atlantic Airspace Tonight

Newsgroup: rec.radio.scanner
Date: 1998-10-23 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.981023042010.30000N-100000@alfa.ist.utl.pt>
Source record: 140737

Hello

Another excellent log for the North Atlantic.
Frequency 4675KHz was very busy with almost 1 flight reporting its
position each minute.
Signals were as always excellent.
Some new interesting aircrafts for me like the A330 of Austrian
(flight AUA502).

It is possible to view how the airspace looked like at:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex13.gif

So that's all for now. Hope you enjoy the post.

Best regards, Andre Brandao

In a recent interview, John Cleese was asked what, in comparison to the United States, was so great about Great Britain. He replied: "First we speak English, second when we hold a world sporting championship we invite other countries to participate, and thirdly when we greet our head of state we only are required to go down on one knee."

What are you talking about. I'm not saying you are wrong exactly, 'cause I can't figure out what it is you're trying to say.

FWIW, many military aircraft do use the VHF airband used by private and commercial aircraft. Is this what you mean?

"majority of us"? Where did you get a determination of "majority of us"? Are we in for more of that "we" crap you're always spouting off about? Oh yeah; you never identified the "we" loony boy. I didn't forget. Who is "we" loony boy?

Oh..and Ryan....Bill's pretty much had it with the NG. So I dunno if he'll correspond with the NG. This Mackey clown has been obsessing on Cheek for years. Mackey's forged, canceled, and flamed his way onto most everyone's sh*t list. Well....he goes to the "filter list" first, ...then ya figure out that he changes his ID more than his underwear...and *that* moves him over onto the sh*t list.

If ya get a chance Ryan, ya oughtta ask Mackey why he changes his ID so often. Maybe he'll give you that "pioneering next generation E-mail tools for the good of all people someday" bit. It's hilarious. The little dirtbag is worming around everyone's filters and actually thinks we all buy an explanation that he's doing it in the name of his "research".

But Bill decided not to participate anymore and we got stuck with Mackey; the friggin' loon.

I have several AOR scanners and I feel they are worth the money. hey
are definitely better than the Yupiteru junk. Here's an honest
question for you: Why do self appointed price police morons like
yourself find it necessary to make unwarranted comments on someone
else's messages? You don't have to buy the person's product if you
are not interested in it. I am sick of seeing people like yourself
screw with others who mind their own business. So, take the hint and
go away!

from AOL http://www.aol.com thoughtfully posted:

> Been monitoring AAR (railroad) freq's and often hear audio from TV stations.
> The freq often differs and comes in and out. What is this?

Someone nearby has a "leaky" cable TV connection.

Cable channels 20, 21 & 22 have their audio carrier in that
range. CATV Ch 20 is probably what you are hearing.

Here is a snippit from Kirk's list:

```
+-------------------------------------------------------------+
| AIRWAVE CATV CATV TUNER CHANNEL VIDEO COLOR AUDIO |
| CHANNEL CHANNEL SETTING1 START CARRIER CARRIER CARRIER |
+-------------------------------------------------------------+
| E 18 144.00 145.25 148.83 149.75 |
| F 19 150.00 151.25 154.83 155.75 |
| G 20 156.00 157.25 160.83 161.75 |
| H 21 162.00 163.25 166.83 167.75 |
| I 22 168.00 169.25 172.83 173.75 |
+---------------------- VHF HIGH BAND ----------------------+
| 7 7 7 174.00 175.25 178.83 179.75 |
```

You will probably also be able to hear the video as a steady
carrier with a slight buzzing.

This will happen when the shield of the CATV coax opens up. The
CATV line then becomes a big (transmitting) antenna. Most likely
a connector exposed to the elements has finaly corroded through -
and the shield usually goes first.

You should notify the cable company about your discovery - the
cable company can get into trouble from the FCC and/or FAA if it
is allowed to continue. Ask to speak with, or leave a message
for, the chief engineer. Tell him where you heard it - and they
can go out and look for it (they have equipment to do this - as
they are required to do an "audit" of the entire system looking
for "leaks").

Cheers,
Paul Grohe

PCI is certainly the trend, but some high-end industrial cards are
still made in ISA and there is still a lot of infrastructure
investment based on ISA, so I wouldn't rush to courts for some years
yet...

>an external and isa model to clearify this ?

I happen to own WR1000i and WR1500e. I did find the serial interface
of the 1500e a bit slower than my 1000i, but not to the point that it
would make much difference. However, if you have a few other
resource-hungry programs running (say downloading a file from the Web
at the same time), then the serial drivers seem to slow down and the
refresh rate of the spectrum display does slow down to about half the
usual speed (using my 233MHz laptop). I observed no such slowdown
with the PCMCIA card.

2105. Re: TV audio on 160.xxx ...

Newsgroup: rec.radio.scanner
Date: 1998-10-23 00:00:00 UTC
From: k4cc@aol.com
Message-ID: <19981023080811.03420.00000017@ngol02.aol.com>
Source record: 140764

The following frequencies are among those allocated for RBP
(Remote Broadcast Pickup), including feeding program audio
to units in the field:

161.640, 161.670, 161.700, 161.730, 161.760, 166.250

If you heard TV audio on one of these frequencies, it is
most likely RBP. Otherwise, it is most likely cable leakage.
Dave

2106. Looks like importing a Dreamcast will cost an arm and a leg ! $900.00 !!!!!

Newsgroup: rec.radio.scanner

I'm not sure what this is.. Never hear anything that's EXACTLY like this, but from the frequency it's on, I wouldn't be surprised if it's not some type of low speed telemetry system for your local town. Perhaps, the water or sewer department to monitor pumps or fluid levels. The piece that you've recorded sounds like it was in some idle mode at the time and wasn't sending any data. If you listen to this you may notice that the audio will change from time to time. There are a lot of folks out there making systems that do this type of remote control and telelmetry stuff. Most of the manufactures have their own proprietary scheme for sending the data over the radio (thus they all sound a little different). Try lisiting from around 450.9 to 451 and 455.9 to 456. Here you may listen to some broadcast transmitter remote control systems. 154.465 is another spot that you'll likely hear a bunch of this type of stuff that the power company uses to do load shedding. It sound different too....

Man, you guys just don't get it, do you. Folks, there are people in
government and industry who read this newsgroup and compile postings like this
to use as evidence of "electronic stalking."
Posting this kind of thing on a public forum is plain stupid.
But then again, perhaps it was posted by a cellular industry stooge
working undercover to plant "evidence" to use against us.

The STS-95 freqs can be found in the web sites. I know there there, I have seen them but did not make any notes. Check out the Yahoo web browser for such freqs. There are tons of frequency sites to browse.

Also check the amateur radio frequency sites. The shuttle audio is re-transmitted via most ham repeaters around the county. I personally am going to check it out on my satellits dish at W-2 transponder 9, the NASA Satellite Feed.

Yea but at least hundreds of his posts relate to the scanning hobby. NONE of yours ever do John. Nothing but SPAM, every one of them. OK you got Bill kicked of his ISP. Why can't that be the end of it? Why must this nonsense clutter up the newsgroup servers. This newsgroup used to be pretty cool. Now it's nothing but a flamefest all the time. If there are 300 new headers when I log in, usually half of that has nothing to do with the newsgroup title. What a shame. The Internet is great tool for sharing information. Too bad a few people like you are turning into a bickering and name calling contest. If I want that I can turn on the TV and watch Geraldo or Maury or Opra or any of those dirtbag shows that specialize in that sort of stuff. I don't want that crap so I look to the scanner newsgroups to stimulate my learning of the scanning hobby. I might even be able to help someone out once in a while.

Please, I'm begging you DROP THE BILL CHEEK THING. And let's start talking about scanners again.

No one is forcing you to "READ" what the
IDIOT of Stinking Mackeral has to say or
try to say...

You have plenty of warning what the subject
is going to be about: Bill Check.

YOu know who is writing about it or that and
you know how to smell and spell

Mackey or whatever isp he is
using lately.

Now...no one is forcing you to punch those items
into your view. No one.

And you are fully aware of KILL FILING and that
brings to mind "why don't you?"

Then all your "troubles" would wash themselves down
the drain...

You control what you read. so why bring this bs
stuff up when we are not forcing you to partake of
what you yourself claim you hate ...

...then why read the postings by mackey and
congregation?

....ohhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhhmmmmmmmmmm

bill cheek is abou to speak to me....
ohhhhhhhhmmmmmmmmmmmmmmmmmmmmmmm...
...hmmmm, someone cut the connection.

bill conduit
etc.

>channels.

It is caused by the 322.6 MHz second local oscillator inside
the BC9000XLT. The RF energy from this LO is strong enough
to mix with incoming VHF-high band signals.

The sum of the "phantom" plus actual frequency is approximately
322.6 MHz.

I have a nearly new Pro-64 handheld scanner in the box that I will trade for a good, newer Packed TNC suitable for APRS. My PK-232MBX is tied up with utility monitoring, and I need another TNC to dedicate to APRS. The PRO-64 is a great performer, triple-conversion, with ability to upload freqs from your computer. Please respond to me directly. Remove NOSPAM if seen.
Thanks,
Brad, NB9M

2144. Attention Aviation Radio Monitors, Scanning Buffs

Newsgroup: rec.radio.scanner
Date: 1998-10-24 00:00:00 UTC
From: Victor Healey <fourphun@bellsouth.net>
Message-ID: <gRtY1.554$827.697257@news4.atl.bellsouth.net>
Source record: 140551
Cross-posted to: alt.aviation.fun,alt.radio.scanner,rec.radio.scanner

CQ CQ all Aviation Monitors de ki4je.

Please assist the 4phun-scanning list by mailing all aviation related info to me or this list during the days up to the lift off of Space Shuttle STS-95. This is no joke.

What can you find about the civilian or military airports in your area?
What frequencies do they use?
How do you decode the traffic you hear?
What interesting web pages can you locate related to aviation?
What scanners are suitable for monitoring aviation bands?
What are the aviation bands, don't forget H.F.?
Explain some of the jargon you hear such as 'heavy', 'squawk'.
What are the security and crash frequencies unique to your favorite airport?

These are questions to prime the flow of information, add your own or answer as many as you can.

Suggestion:
If you are using Microsoft software with MSIE 4 you can send any WEB page you discover by one of two means.
1.. Click on File then Send then Page by EMAIL.
2.. Click on Edit then Select ALL. Then Click on Edit then Copy. Paste that into a new message.
Make sure you have selected HTML formating and FORMAT Send Pictures from the Internet.
Please edit any information to remove commercials and superfluous information.
Add your own comments and email it to 4hun-Scanning. Think of what you are doing as preparing a magazine page.
Small pictures can be enlarged without changing the file size but will begin to look grainey. Large pictures can be cleared by clicking near them to selected them then choosing Edit Clear. Frames with advertising in them can be easily cleared just like pictures.

Then on your PC create a folder under Scanning with Aviation as the title. The best and most informative posts can be saved to this folder with the File SAVE AS option. Choose the .eml extension because the Microsoft Software will save any pictures with that file. You can later rename it from .eml to .shtml or some such extension and it will open complete with pictures just by clicking on it. The extension beginning with s stands for something Special HTML and indicates that certain elements like pictures are embedded in the HTML file. Even if you don't rename it it will open as an email message for you to view the data or print out. If you get enough useful messages this time around you can burn these onto a CD-ROM for safe keeping and future reference. I am sure that Netscape's software probably works in a similar manner, I just don't know the capabilities of the latest Netscape software.

OK so you are not an Aviation Monitor yet. Why not join in the fun and see what you are missing?

Use this link to join the one and only high tech HTML EMAIL scanning list
http://www.onelist.com/subscribe.cgi/4phun-scanning

This is getting easier than hypnotizing chickens ....

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey).
Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched
the archives at Dejanews to see how much John "contributes" to the
group. I found some 13000 posts in all in the scanner newsgroups since
he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has
made can be counted on one hand, with room left over. Case closed,
folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have
proven what the Clown Prince of Scanning is really all about: A
personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0
NOV 97	63	65	1	0	10	0	0

OCT 97 | 48 | 60 | 0 | 0 | 8 | 0 | 0
SEP 97 | 181 | 78 | 0 | 2 | 4 | 0 | 0
AUG 97 | 29 | 2 | 0 | 1 | 2 | 0 | 0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

Wow John, you aren't going to believe this! You left some very important stuff out of your quote. Typical of your style but here you go:

Date | Mackey | Cheek |

TOTALS | 2139 | 2348 |

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

********** end missing quote **********

Wow! Sure makes a difference doesn't it? It would be odd if it wasn't your trademark. You are welcome!

Question Regarding Pro-43 Versions

How many versions of Pro-43 were produced by RS are in the market?
I understand the first versions had full cell coveraged and the latter versions were Cell blocked. Would that be hardware blocked vid diodes or software blocked?

If so, what are the S/N for the units that are unblocked and blocked units?

Thanks

Bing

Which AOR 8200 computer link should I buy? I need db-9, and understand that AOR will be coming out with their own and also that Javiation sells one as well. Thanks for any tips, suggestions.

Justin-
Yes, trying to find info on a Pro-2008 is about as difficult
as trying to call the president on a pay phone to get a honest answer
about UFOs. It just doesn't seem to exist. I seem to recall that it
had orange and white buttons, blue LED display and a whopping 8
channels!!! Unfortunately, there wasn't enough of these, nor enough
perks for it to ever be hacked. Unfortunately, I don't think that you
will find anything, nor by the time you try to find the service
manual on this scanner (that doesn't exist), then it would have been
better time wasted looking for a good deal on a scanner at a pawn shop
that can readily get this band.

Wiggie

> 480.090 480.130 480.145 480.165 480.205 480.220 480.280 480.310

You are hearing the wideband AM video signal of UHF TV channel
15.

Here is a snippet of Kirk's CATV list:

```
+-----------------------------------------------------------+
| AIRWAVE CATV CATV TUNER CHANNEL VIDEO COLOR AUDIO |
| CHANNEL CHANNEL SETTING1 START CARRIER CARRIER CARRIER |
+-----------------------------------------------------------+
| 14 W+29 65 470.00 471.25 474.83 475.75 |
|>> 15 W+30 66 476.00 477.25 480.83 481.75 |
| 16 W+31 67 482.00 483.25 486.83 487.75 |
| 17 W+32 68 488.00 489.25 492.83 493.75 |
| 18 W+33 69 494.00 495.25 498.83 499.75 |
| 19 W+34 70 500.00 501.25 504.83 505.75 |
| 20 W+35 71 506.00 507.25 510.83 511.75 |
```

Tune to 477.25. You should hear a "dead" carrier in FM mode, and
a slightly "buzzy" carrier in AM mode.

At 481.75MHx, wideband FM, you should hear Ch 33's audio.

Note that these channels are right in the middle of the
470-512MHz band. That is why the 470-512MHz frequency range is
sometimes referred to as the UHF "T" (Television) band by some

scanner manufacturers.

"Empty" TV channels are used for mobile communications in this band - and vary from city to city.

Cheers,
Paul Grohe

From: F Barry Mulligan <70035.140@CompuServe.COM>
Message-ID: <#gFsWAx$9GA.157@ntawwabp.compuserve.com>
Source record: 140589

"Brian Parry" <brian_parry@hotmail.com> asked:
> What is the steps between cell freqs? Thanks.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

ap572@FreeNet.Carleton.CA (Bing Hum) asked:
> ... what are the S/N for the units that are unblocked and blocked units?

Kirsten Bremer, under the subj. "Radio Shack Date Codes?", asked:
> Can someone tell me how Radio Shack date codes work and how to read them?

Radio Shack items have a date code in the form 'mmAy', where 'mm' is the month and 'y' is the year (the 'A' stands for A & A Trading, Tandy's import arm). 5A4 or greater indicates an import date after the cellular cutoff.

Radio Shack radios have an FCC ID of the form AAOnnn-nnnn, where AAO is the FCC Grantee Code for A & A Trading and nnn-nnnn is normally the catalogue number of the item. PRO-43 scanners with an "A" at the end of the FCC ID (AAO20-300A) are not modifiable. This does not necessarily apply to any other model.

Unmodifiable PRO-43s have an "A" preceding the serial number. This also does not necessarily apply to any other model.

This posting was brought to you by the letter A.

I have owned four 9000xlt's over the past four years or so. When searching NFM, 5 KHz, two of these units were very accurate as far as stopping on frequencies, and two would stop slightly off frequency and I would have to tune the signal in manually. Anyone know why? Do these radios vary in this respect?

2187. Re: DETACHABLE FACE? OR IDEAS?

Newsgroup: rec.radio.scanner
Date: 1998-10-24 00:00:00 UTC
From: Dennis <djmr26@bestweb.net>
Message-ID: <01bdff44$7940f0c0$36685ed1@oemcomputer>
Source record: 140601

It would be a lot easier to disguise it than pull off the face and rewire it to be detachable. If it's a small box, you should be able to come up with something to make it appear to be something else or enclose it in the dash where it can be covered with a panel or door to make it disappear. Years ago I mounted a small CB in a rectangular slot I cut in the dash panel and took a tissue dispenser I bought in the local auto parts store, cut it down, and fit it right over the face of the radio - Voila! - it was gone. A real tissue hung from the front of it and no one ever knew it was there. I no longer had to bother removing it each night to deter theft. Something in the way of a larger box may present more of a problem, as would an antenna visible on the car if you don't want suspicion to be aroused (my CB antenna in the above installation was of the type that bolted to the inner lip of the trunk and was hinged so that you opened the trunk, folded it into the trunk, and closed it). This may not be satisfactory in the case of being searched occasionally, so you may want to try one of those antenna splitters that allow you to use the FM antenna on your car for the scanner at the same time, though I'm not sure how well they work. A little imagination will go a long way; making the radio appear to be something else would be better than trying to bury it in the dash or somewhere else and presenting difficulty accessing it or using it easily.

Air Band is AM, everything on that scanner if FM.

Scanners that really include Air Band(s) include the AM circuitry and automatically switch from FM to AM in the air bands. A few older scanners could tune the Air Band(s) frequencies and would even find the Air Band signals, but couldn't actually receive the audio.

Your PRO-2008 is almost certainly FM only and wouldn't get you any readable audio even if you succeeded in tuning it to the Air Bands.

I replied to his post and gave him my phone no. and told him to call
me, which he did and we agreed to each send out the next day. I sent
him a bank money order for $150 and sat back and waited for the 2005
scanner. after 4 days I emailed him for a total of 3 times. so then
I went to the bank to check on the money order and it had not been
cashed yet. So I was able to stop payment on WHEW. I guess I was just
lucky. I reported the whole thing to the Louisville police fraud Div.
All I can say is watch for those LOW PRICES and if he is from Louisville
Take care....Jerr1919@gte.net

>believe the hype.

The consumertronics people sell a demo tape of their system. It picks up the
colors on a moving screen quite well. However, the video does not give a good
view of the text on the screen. Either they were so impressed with their
color interception they forgot to stress the text, or maybe it wasn't to good
to begin with.

I'll withold judgement until I see the system up close.

I've seen it up close and in action and the results were pretty crappy. They set up the Van Eck about three feet from an old beat up TV and and tuned in a picture that was as crappy as the one on the TV. What that was supposed to prove, I dunno.

Here's the list of frequencies I have for the actual launch area.
Below these I've added the ones for the shuttle space-earth
frequencies.

118.9000: Space Coast RAP (launch-related acft).
121.0500: Patrick Appr freq used as discrete for launch-related acft.
125.9000: CCAS RSO, range clearance comms.
126.6500: CCAS Cape Twr, NASA WX acft prelaunch.
128.5500: KSC-Shuttle Landing Facility Twr.
132.6500: Patrick AFB Appr/Dep South.
133.7500: Patrick AFB Twr.
133.8000: CCAS Sr RSO, clearance into Restricted Area.
134.9500: Patrick AFB Appr/Dep North.
141.3000: CCAS RSO.
145.1300: HAM Rptr - Vero Beach, retransmission of NASA Select.
146.9400: HAM Rptr - Melbourne, retransmission of NASA Select.
147.1500: HAM Rptr - Daytona Beach, retransmission of NASA Select.
148.4850: KSC Photo (Net G).
157.0750: Marine Ch 81A prelaunch comms.
157.1000: Marine Ch 22 prelaunch comms.
157.1500: Marine 23A prelaunch comms.
163.0000: CCAS Security.
163.4625: KSC/CCAS Security.
163.5125: CCAS Disaster Ops (busy lately).
163.5375: KSC PR.
165.1875: KSC Safety.
171.2625: KSC Media Coord.
173.1750: KSC Security.
259.7000: STS Air-Ground Comms during launch/landing.
264.8000: CCAS Sr RSO Thinker 1 Charlie.
284.0000: KSC SLF Twr.
291.8000: CCAS STS Support.
294.6000: CCAS STS Support; RSO.
340.9000: Patrick AFB Appr/Dep South.
348.4000: Patrick AFB Twr.
358.3000: Patrick AFB Appr/Dep North.

30.005 - 31.025MHz NASA Space to Earth NFM Simplex
259.700MHz International Space Shuttle down-link
296.800MHz International Space Shuttle down-link

Hope these are of help. If you get any more could you let me have them please.

Thanks

Darren

What I have done in several of my cars, is to go to the local WalMart, SuperK Mart, or Towel Outlet, and buy a black face or bath towel. I drape it over the radio(s), and if someone is looking for a specific item, they may not see it at all. The black towel blends in well with most interiors, especially at night. As the previous person who posted stated, an antenna is a giveaway. The better you can keep it out of site, the less of a chance someone is gonna make your car a target.

Hi.

I would like to know if anyone is interested in buying the e-mail address such as yourcallsign@radiotelephone.net

I don't mind selling it for $1~$2/month per one e-mail account (no spam allowed).

I just wanted to see how many people would be interested in such deal.

Thanks.

2217. Monitor cellphone on TV?

Newsgroup: rec.radio.scanner
Date: 1998-10-24 00:00:00 UTC
From: Henry Kim <henry.kim@-nospam-entrevision.com>
Message-ID: <363231CF.8E7867A9@-nospam-entrevision.com>
Source record: 140631

Please excuse the newbie question, but I read somewhere that you can
hear cellphone traffic on TV channels 70-83 with a UHF antennae. True?

Sounds like a subcarrier on a regular FM broadcast station. Commercial
free, technical, ethnic, religious and special purpose programming is
very common, especially in large cities. Usually you lease a special
receiver, which is an ordinary FM broadcast receiver but with a
special subcarrier detector. Not hard to make up one on your own using
a 567 PLL and about 20 other components.

Elevator music, doctor's office and restaurant music frequently is on
a special subcarrier. The subscribers pay for the use of the receiver
in exchange for commercial free music. Officially you can't use
recorded music in these applications because of copyright violations,
so to be legal customers must pay someone for the use of the music.

If you have a receiver with a spectrum monitor you can see the
subcarriers. Easy to see on a service monitor too.

Just found out I'm leaving first thing in the A.M. for SoCal.
Flying into San Jose, driving to Santa Cruz, then up Hwy 1 to San
Fransisco. Need area scanner frequencies A.S.A.P.
Been searchibng the 'net without any success.

Can you help with some frequencies for this area?

2220. Newbie question: modifying old scanner for airband?

Newsgroup: rec.radio.scanner
Date: 1998-10-24 00:00:00 UTC
From: JustinG@ou.edu
Message-ID: <slrn732cp0.aa8.JustinG@bosworth.ocs.ou.edu>
Source record: 140675

I've got an old Realistic PRO-2008 (yes, 2008) scanner. It covers 30-50 MHz, 144-174 MHz, and 410-512 MHz. What I'd like to be able to hear are the airband channels between 108 and 137 MHz. Would it be possible to modify this radio to cover that range 108-137MHz? If so, how difficult would it be? Would it just be a matter of changing crystals?

I searched DejaNews for info on the pro-2008 and found more posts arguing its very existence than posts giving much info. ;) It does exist, but it's very old, which is why I'd be willing to take a chance modifying it, if it's possible.

Obviously I am not a scanner expert or electronics expert, so please, if this is a stupid question, try not to spew coke on your monitor.

Thanks in advance,
Justin

>News flash: Uniden MAKES some of Radio Shack's scanners!

NO KIDDING, Drew . . . thanks for enlightening me on that subject. I would be completely lost without your help and guidance when it comes to scanners. Yes, Uniden makes some of Rad Shack's scanners, and Uniden also makes CB radios for the Shack. (GRE makes scanners for Rad Shack as well, but that's beside the point.) But unless Uniden has also "banned" the military aircraft band from all of their scanners, they have not (in my opinion) bowed to pressure from the FCC on the cell issue as the Shack has. That was my reason for saying that I'd stick to buying Uniden's scanners from now on. 73.

Message-ID: <70vqkv$d8$1@lesche.lesche.missouri.org>
Source record: 140438

You might go to deja news and search missouri highway patrol frequencies. I found a response there from Randy Ebers, who works for the patrol and has quite a frequency list for the entire state. It is dated 980629 and the subject is RE: Skip Alive in NH today......

The freqs you're interested in are 42.380 for the "rural" side at Troop A (Lee's Summit) and 42.06 for the "metro" side at Troop A, which covers Platte, Clay, & Jackson counties. Troop F starts at the Cooper/Saline county line on I-70 and operates on 42.120. You'll hear the airplane and associated chase cars on 42.020 in all troops.

Hope this helps.

2236. Pro 2005 for sale

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: tglunz@cnnw.net
Message-ID: <36356f42.41144925@betanews.supernews.com>
Source record: 140440

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

Message-ID: <#zpfkhEA#GA.56@nih2naac.prod2.compuserve.com>
Source record: 140444

Henry Kim <henry.kim@-nospam-entrevision.com> asked if:
> ... you can hear cellphone traffic on TV channels 70-83 with a UHF antennae.

In North America, the high end of the original UHF TV spectrum was
reallocated. The cellular base frequencies (869-894 MHz) were given the
range previously occupied by TV channels 80 thru 83 (866-890 MHz). Cellular
mobile (824-849 MHz) is on TV chs 73-77 (824-854 MHz).
An older TV, with manual fine tuning, can pick up cellular. You will
probably only get the bases, and a tiny twitch of the fine tuning will slew
through a dozen cellular channels.

On a side note:

hose92@aol.com (HOSE 92) suggested:
> ... radio shack antenna catalog number15-623 ... it's a double bow tie.

While I don't have a recommendation for it as a UHF antenna, one that
was installed on a 12th floor balcony was adopted as a nesting place by
a pair of house finches. They and their descendents have returned annually
for more than decade to raise new broods of chicks. One early fledgling
took his first wobbly flight and landed on an adjacent balcony. Contemplating
the 120 feet down to the pavement, he insisted loudly that henceforth he'd
wait for the elevator.
If it doesn't work out as an antenna, consider it as a potential bird
house.

John,
Maricopa County has a 800Mhz trunked system which is used by the County Animal Control, Probation officers, & jails. Other cities including Scottsdale, Gilbert, & Surprise have agreements with the county for use of the system. They can all be monitored by using a Trunk Tracker.

2247. WANTED: OPTO-456 BOARD

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: peaster <peaster@connors.cc.ok.us>
Message-ID: <710456$61j$1@sunhub-tulsa.onenet.net>
Source record: 140451
Cross-posted to: rec.radio.swap,rec.radio.scanner,rec.radio.amateur.swap

Hello,
I'm looking for an OptoElectronics 456 board, the FULL version not the lite version. If anyone out there has one that they would like to sell or knows where I can get one please drop me a line. Please respond via E-Mail to peaster@connors.cc.ok.us
Thanks & 73's
Mike Peaster

2248. Scout frequency recorder users?

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: woodpost@nuthin.com
Message-ID: <71086t$bm4$1@nnrp1.dejanews.com>
Source record: 140452
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I got my Optoelectronics Scout with DB32 mini-antenna a year or two ago. Used it in my car on the way to work for a few weeks, and then stuffed it in a drawer and forgot about it. Now i've dug it out and have started using it again, but it seems to not be performing adequately. I used to easily pick up a dozen cell phones or so every trip, but now im getting nothing. It wasn't even able to capture a 49Mhz cordless phone call within 1 foot. Granted, i don't really know how to use the thing. is there a simple test i can perform to verify it's operating within decent standards? what are the different modes and which should i be using?

thanks for any advice,
-c

I beg to differ because I have a PRO43 that says Radio Shack on it
and it was still modifiable, dated 1A4 serial 077670, I just had to
say that, no offense intended.......Jerr

Well, it's confirmed. A General Radio Operators License from the FCC qualifies you to receive unblocked scanners from at least one manufacturer. Maybe most of you knew this. Here I'm trying to avoid cell images on my scanners and they're telling me I can get cell if I want it. I'd rather get triple conversion and no cell at all, oh well.

Steve

if you are close to any towers it is possible that you are indeed
hearing a telephone conversation...

some of those towers are long distance transfer towers...hilltop to
hilltop type stuff...

you may also hear some stuff up in the 490's and lower 500 range....

i am not schooled much in this stuff...but this is just from
experience...

i have some time share in the mountains in virginia and about the only
stuff i get out there with my portable is phone conversations in the 47
to 50 range and 490 500 or so....

2255. Query: New CA Radar-Detector Law Effective Jan. 1999???

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: "Todd L. Sherman" <afn09444@afn.org>
Message-ID: <Pine.A32.3.95.981025174817.62902B-100000@freenet2.afn.org>
Source record: 140459

I've learned to expect anything and everything from California, thus, why I'm not taking this rumor lightly...

Someone notified me that come Jan. 1999, the sale of RDs in California will become illegal. Is there anyone in CA who has heard of this? Will this also mean that possession and/or use of RDs in CA will be illegal? or does it just pertain to the sale? If possession will be illegal, will that mean ONLY while mobile? or at all times ANYWHERE in CA...precluding purchases from out of state, too?

Since its not an actual law yet I'm not even going to bother trying to find it in the CA Code books, since it won't be there just yet. I'll have to wait for the update that comes out AFTER the new law goes into actual effect before I'll be able to actually see any text reference in them the way they do things here, and that could be a while. But could someone give me some other California reference material within which to find this proposed new law, the actual text of it, so that I can update my web site users?

Thanks,

Todd

Nah, I'm sure 90% of cell phone conversations would bore me to tears. I
read about the TV trick in a library book and I wanted to confirm it.
Amazing what you can learn by browsing through the library. I once
found a book on how to make bombs and timers with everyday materials
like beans and fertilizer. I guess everyone knows about the fertilizer
by now.

2263. FS: Pro-34 w/cell needs work

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: Papercut <papercut@pgh.nauticom.net>
Message-ID: <3633C550.4AE8@pgh.nauticom.net>
Source record: 140467

A friend just gave me a Pro-34 and I'd rather sell it than try to fix it. I also have two other scanners so I really don't need it.

It's a Radio Shack PRO-34 that appears to be in reasonably good physical shape. The cell mod has been performed. AC adapter, owner's manual, and antenna are included.

The problem is that apparently some batteries leaked and messed up two keys on the keypad - the PGM and the ENTER keys don't work. Oddly, the Clear key which is on the corner between them works just fine. I don't know what it will take to repair and don't really care to find out.

You can enter a frequency and then scan up or down by doing direct scans, and all of the freqs that are now programmed in work just fine. Being without the PGM or the ENTER keys does pose some problems for entering new frequencies.

Scanner is offered AS IS. Make me an offer.

Bill Conduit (BAYCITVIDGRP) -

PLEASE stop your harrassing & trouble making on this NG. Now,
according to your previous post you are attacking "allsafe"!!

Your pattern is clearly emerging as a trouble making type who loves to
start flame wars! Just like at the beginning of this thread where
someone asked "Where's Bill Cheek?" & I told that person how to
find Cheek (his current e-mail address) & that many here respect
Cheek's decisions; you used this as the basis to START a flame
war stating you didn't want to be part of a group that respects
Cheek's decision!!!!!!!

What the hell is the matter with you?????

If you can't say anything nice then don't say anything at ALL!!!!

You will notice I said NOTHING in my response to Ryan that could
reflect bad on Cheek. I simply answered the question & advised him
on how to find Cheek! I mentioned NOTHING of how Cheek was kicked off
of
his ISP for abuse (after SEVERAL warnings) or how Cheek was kicked off
of
the SCAN-L mailing list for abuse (after SEVERAL warnings) or how Cheek
REFUSED several requests of a truce on this NG because it required him
to stop flaming or how Cheek has a track record of problems on this NG
going back over 3 years.

Again, I mentioned NOTHING of these problems, I simply answered
Ryan's question & told him Cheek is no longer here, that many of
us respect his decision, & how to find Cheek. I said nothing
negative. BILL CONDUIT, get off your high horse & stop being negative
& causing problems for a change.

I need a Pro-34 for parts. Sounds like that one is going to need some big bucks to fix. Will you take $10 for it ? Plus I pay shipping cost ?
Thank You!.

2271. New Calling All Citizens Banner...

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: Dpinero@pobox.com
Message-ID: <3638b2f3.5967133@news.mindspring.com>
Source record: 140475

Today I noticed a new Calling All Citizens web page banner. It currently appears at the CAC site:

http://members.aol.com/truth4000/page1.htm

...but originally appeared at

http://www.flink.com/users/unholey/index.htm

The GIF artist in this case did a good job in combining all previous banners into a catchy animated banner that can be used in lieu of all others at your web site if you don't mind the extra download overhead.

FYI, the CAC site stands for "Calling All Citizens" and is an advocacy site for open public safety communications. In this day and age when police and fire communication systems are going trunked and digital...away from citizens who used to listen with commonly available police scanners, my site pleas for a reconsideration at the administrative level. My postulation is that open communication systems make safer communities, and in fact it should be public policy to encourage the public consumption and use of police scanners instead of discouraging them.

Hello,

I am wondering if anybody knows and Border Patrol and Customs
frequencies used in Texas, New Mexico, and Arizona. If you know any
other frequencies for the agencies used in other state, I would also
appreciate them, they just reallocate the frequencies from area to area
and I willjust put them in a scanlist and listen to them.

Thanks, just e-mail back

Shaun

You post:

Date | Mackey | Cheek
TOTALS | 2139 | 2348

And leave out this:

Consider this point. Less than two dozen of the total posts by Mackey pertained to scanners or scanning. Approximately half of the posts made by Bill Cheek were devoted to scanners and scanning. Now go back and look at the numbers again. You do the math.

and say you left it out because:

>It seemed just like more of the typical waste of bandwidth
>with no useful purpose.

Do the math John.

cordless phone, but not digital spread-spectrum. It does have a voice-scrambling feature on the digital models, so
that makes it diffucult - but not impossible to hear. I'm not sure where to look to descramble digital phone comms,
but I will suggest that if you really want to hear a certain person - get a cheap fm bug, or tap the phone. It's
really cheap to tap the phone with components from Rat Shack. I did it to my {now} ex-wife. Worked really well...

btw - I'll deny this under oath... ;)

tru bye radio shack antenna catalog number15-623 it retails for $15.99 it's a double bow tie. a home plug the antenna to television and turn the ant. on its side yes on its side.u want to pick up the signal vertically. tune tv from 70 to 83. this works best on old analog televisions with fine tune knobs.channels 70 to 83 happen to be close to the cell frequencies. the television will only pickup nearby conversations.good luck on do not talk about what u hear on television.

>Does anyone know the military police scanners freq for Fort Hood Texas
>

Search the 162.00 to 174.00 range, and the 148.00 to 150.00 range. If they're still using the old radios they'll be somewhere in there. If they're on the new trunked system they'll be between 408.00 and 420.00.

the famous ten codes came about a long time ago when the radios in the cars were about 10% efficient and drew too much power causing a strain on the alternator and battery. This gave officers a limited talk time so they came up with codes to cut down the talk time. The 10 codes stuck many departments are using free speach now but the classic codes will always be used because they are easier examples are 10-27,10-28 and 10-29 in order meaning drivers licence check, licence plate check, and warrants check.

Source record: 140494

See info below, Copied from Link provided by Tom.(above listing).Thanx Tom!

RECEIVING SPACE SHUTTLE ASTRONAUT VOICE COMMUNICATIONS

Space Shuttle air-to-ground communication is transmitted on one of two designated S-band frequencies. Because the S-Band voice is digitized, it is unintelligible. When the orbiter is above the horizon, air-to-ground voice on the UHF band can be heard either on 259.7 mhz or 296.8 mhz. However these frequencies are primarily used only during launch and landing. It will, of course, be necessary to know if and when the Space Shuttle will be above the horizon at your location. Unless you are near a NASA tracking station, you will hear only the "downlink," or one side of the conversation, which will be the astronauts talking to ground controllers.

On some missions, the Space Shuttle's orbital inclination is 28.45 degrees, meaning the orbiter travels no farther north in the U.S. than the latitude of Cape Canaveral, the Canary Islands in the Atlantic Ocean region or Midway Island in the Pacific, which limits geographical voice coverage. However, flights which rendezvous with the Russian Mir Space Station and many scientific Space Shuttle missions have higher inclinations, ranging between 39 degrees and 57 degrees. At these inclinations, voice may be heard as far north as the Gulf of Alaska, Hudson Bay in Canada, and the Hebrides in Scotland.

During all Space Shuttle flights, air-to-ground voice (both uplink and downlink) and video from the orbiter are transmitted on NASA Television which is a C-band satellite transmission on GE-2, Transponder 9C, (3880.0 mhz). This is a geostationary satellite with an orbital location of 85 degrees West. Audio only is also available on 6.8 mhz. GE-2 can be received in all 50 states and much of Canada, Mexico and the Caribbean. While the Space Shuttle is in orbit, this system is always broadcasting. The signal is not encoded, or scrambled, and may be picked up with a home satellite receiver. Some cable television companies carry it, at least on a limited basis.

The Space Shuttle on-orbit communications through the Tracking and Data Relay Satellite (TDRS) system uses S-band and K-band. This is encoded and also transmitted digitally, so it is not possible for a home satellite system to receive air-to-ground voice or television from TDRS.

The Amateur Radio Club at the Goddard Space Flight Center in Greenbelt, Maryland, WA3NAN, retransmits the air-to-ground Space Shuttle communications on shortwave frequencies. The best reception on each frequency will vary based on the time of day. The frequencies are:

3.860 mhz
7.185 mhz
14.295 mhz
21.395 mhz
28.650 mhz

That's refreshing. I complain about Radio Shacks component selection but
thank goodness they are there. Mail order has taken over the electronic
component business. Where else can you walk in and pick up a resistor in
your hand these days. I guess some of us were spoiled by stores like
yours in the past and now live near the "Strip mall", tiny showroom,
special order only stores. Oh sure, they have TVs, batteries and cell
phones. At least they have a great battery selection. I wish your
store was within driving distance for me.

in the newsgroup rec.radio.scanner,
JustinG@ou.edu (Justin Greenfield)
from The University of Oklahoma thoughtfully posted:

> I've got an old Realistic PRO-2008 (yes, 2008) scanner. It covers
> 30-50 MHz, 144-174 MHz, and 410-512 MHz. What I'd like to be able to
> hear are the airband channels between 108 and 137 MHz. Would it be
> possible to modify this radio to cover that range 108-137MHz? If so,
> how difficult would it be? Would it just be a matter of changing
> crystals?

Unfortunately, no. Not without doing severe modifications to the
front end RF stage and re-programming the CPU. Just changing a
crystal won't do that.

Also....The aircraft band is AM, not FM. Although you can tune
the discriminator off to one side to receive AM - but the
sensitivity is poor and it screws up the automatic frequency
control.

> I searched DejaNews for info on the pro-2008 and found more posts

> it, if it's possible.

> Obviously I am not a scanner expert or electronics expert, so please,
> if this is a stupid question, try not to spew coke on your monitor.

It's not a stupid question. It sounds easy to just "shift" the
frequencies a bit - but it's just not that simple.

With folks switching over to "trunk tracker" scanners, they are
selling their older scanners at good prices. Keep an eye out.

Left the below text out again John. How come???

****

Consider this point. Less than two dozen of the total posts by Mackey
pertained to scanners or scanning. Approximately half of the posts
made by Bill Cheek were devoted to scanners and scanning. Now go back
and look at the numbers again. You do the math.

2297. IC-Q7, clone, 0-30MHz, here it is.

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <70uoqmmbc3@news00.btx.dtag.de>
Source record: 140501

Since 02.08.98 we all know that the IC-Q7 is PC Programmable,
a great thank to OK1OMX, and his page http://www.hamradio.cz

The Interface is a simple OPC478 compatible interface that ICOM
Uses for all radios, you can use also the interface for the YAESU
FT51/FT50/VX1 or any other HALFDUPLEX RS232 to TTL converter, there
are many variations on the web.

You can find a VERY simple one at http://www.hamradio.cz
The parts are not more then 3 US$ or 5 DM.

So here is the first complete Software solution, with this
Software you can do everything that is allowed by the Firmware,
and beyond.

You can download from http://home.t-online.de/home/Ingra-Beton
the current 0.99 beta version.

The most interesting thing is entering Frequencies below 30MHz,
Yes, yes, the IC-Q7 is complete capable receiving down to 0.5MHz
and below, it has the same (or almost the same) receiver part
as the IC-R2.

The IC-Q7 has excellent sensitivity in the 0-30MHz.

The current Software only demonstrates this capability, full
Implementation to up/download 0-1599MHz Frequencies and opening
a WideRXMode do dial from 0-1599MHz (without gaps) will be
implemented in the version 1.00 (in a couple of weeks), after
clearing bugs and solving some little problems :)

Bugs, suggestions,... to my Email please.

Greetings, ...

Thanks to: Riku Kalinen (OH2LWO), Eric Free and OK1OMX
Hey Riku, I have vorgotten you in the readme.txt, sorry :)

This is the list floating around the net. I think this is the same list I've seen for the last 10 years. Don't know how accurate it is except for the Goddard retransmissions, which are pretty impressive to monitor. Now I know the feeling my grandparents must have had listening to things on the radio before TV was around.

Jeeez-Louweeeeeze! Loony boy's raving about that "mettalic tuning tools on RF oscillators" bit again.

Why don't you go down to the local McDonalds and wave a gun around while you're on your little mental mantra. I see you going down in hail of police gunfire while you wheeze "no mettalic tuning tools on RF oscillators" with your dying breath.

I really see that happening. I honestly do.

You friggin' loon.

All versions of the Pro 43 were cell blocked. The early ones were "restoreable" while the last batch were not. Although not 100% presise, Most of those labled "Realistic" were restoreable, while those later ones labled "Radio Shack" were not.

I don't know of any scanners like the Uniden and RadioShack TrunkTrackers that can follow EDACS trunked radio systems yet. I say yet because information that I have read from a RadioShack internal newsletter says to expect one. I don't have a time table as to when it will be out, but I would expect it to be around this time next year.

I believe that you can put together an EDACS capable monitoring station using two scanners, a computer and the right software. You can find out more about this on Lindsay Blanton's website at http://web2.airmail.net/lblant1/dfw/download.htm

Hope that answers your question.

Masa-
When did they retrofit the Pro-26 for trunking? The original
poster did request trunking capabilities. Due to the specifications of
handheld and trunktracking, the BC235xlt, Pro-90 and Pro-91 are about
the only valid options to choose from. The BC235xlt is found a very
good prices from some places from around $179-$200.

2319. FS: Collectors' Phillips minature digital world-band radio

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: bush143@postoffice.worldnet.att.net
Message-ID: <36335ab7.13759792@netnews.worldnet.att.net>
Source record: 140523
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.equipment,uk.radio.amateur

This radio was feature inside the front cover of the 1992 issue of the "Passport to worldband radio." This is truely a collector's item in show-room condition. It was only used for 30 minutes.

The receiver covers 170KHZ-30MHZ. It is a dual coversion PLL quartz tuning receiver with a built-in world clock/sleep timer, direct freq entry, 18 memories, built-in speaker, and uses 2 "AAA" batteries. The radio is the size of a pack of cigarettes.

It comes with a fitted leather presentation case which holds the receiver, manual, and all of its accessories. The receiver even has its own real leather carrying case, and an external antenna. The entire package also comes in yet another very nice presentation box.

This is a rare receiver for a collector or a traveler with a need for a tiny quality SW radio. I am asking $350 or best offer to ship this beautiful package within the USA. Will also see overseas for additional shipping costs.

I have noticed that there are now some frequencies in PHoenix area in the
866-869mhz range. I think some are used by city of Phoenix whioe others ar
the Maricopa county system. I have heard what I think is Rabies/Animal
control as well as the Jail/probation department here

I have figured out most of the 856-861mhz trunking frequencies

monitoring newer brands of cordless phones is becoming more difficult most are being made with what is called spread spectrum. i use the radio shack pro 90 and can get plenty of 900mhz cordless phones and no cellular calls except the older model mobile phones. so its the luck of the draw which cordless you can get if you can find out the phone your trying to drop in on is a spread spectrum or not then you will know if its your scanner or just a phone you will never hear.

2322. Scanning Software Issues

Newsgroup: rec.radio.scanner
Date: 1998-10-25 00:00:00 UTC
From: talley@earthlink.net
Message-ID: <09980925093326.OUI07.talley@earthlink.net>
Source record: 140526

I figure there are two kinds of computerized scanning.
Type 1 takes an old clapped out 386 machine, puts Win 3.1 on it
and sets it in the corner and scans away.
Type 2 wants to run his scanner in the background on his Pentium
machine. I'm in the latter camp and have had big problems running
certain popular 16 bit scanning applications in Win 98. Some will
install, run perfectly, then not run the second day. Others run great,
but bog down the machine's resources. So I went to Strong Signals
http://www.strongsignals.net/
and started looking for a 32 bit app that was Win95/98/NT4 only.
I came upon Listening Post which runs like gangbusters in my Win 98. I
can't understand why it isn't more popular, must be underpromoted some
way.

Listening Post has the feel of an app that's created by computer/data
retrieval professionals rather than by some ham who bought himself a
copy of Visual Basic and started coding away.

Listening Post can be found at: http://www.lpcom.com/

Source record: 140530
Cross-posted to: rec.radio.swap,rec.radio.shortwave,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.rec.radio.amateur.misc

This receiver is in outstanding condition, and needs nothing. It is factory unblocked, and comes with all original accessories, fuses, cables, plugs, manual, and box. The display is bright, and numbers and letters on the radio/buttons are unblemished. There are no scratches or marks on the radio. This radio was rarely used and always returned to the box after several hours of use. It has always been in a non-smoker household.

Reason for sale is because I need to clean out my closet to get money for other new toys. Would like to sell this receiver for $900 or best offer, shipped and insured within the USA. I will also throw in the original service manual for $900. (I try to buy service manuals for all my radios before they go out of print.)

Pictures from the Internet.
> Please edit any information to remove commercials and
superfluous information.
> Add your own comments and email it to 4hun-Scanning. Think of
what you are doing as preparing a magazine page.

Ahem! Those of us who have written the web pages that people will be sending to you if they follow your "suggestions" above are not going to be thrilled with the violations of our copyrights. Just exactly what "commercials and superfluous information" are you suggesting be removed? Author credits and copyright information, perchance? "Add[ing] our own comments and email[ing]" a web page to someone else is legally considered to be the creation of a derivative work, the sole right to do which belongs to the original creator of the web page. "Think of what you are doing as" pirating of intellectual property and a Federal crime.

Don't believe me? Go read Title 17 of the United States Code. Then, if you have "international" objections to the application of U.S. law, take a look at the Buenos Aires Convention. If any of my web pages show up in your mailing list, I will be moving against the listowner, who will be criminally and civilly liable.

I'm not just blowing smoke. I subscribed to the "4phun Scanning" list for a few days. I saw a few pirated web pages, and a lot of traffic on how to violate speed regulations while driving. Not a whole lot of scanning information there.

Don't know. I do have an alias through AMSAT which is: mycallsign@AMSAT.ORG
I keep it current with my paid for ISP account. Anyone can do this, just
visit their website to find out how.

Rob,

Would you be interested in a trade for a DX-398 (Sangean ATS-909)
shortwave receiver. It is less than 8 months old, and comes complete
with carrying case, wall wart power adapter and I'll even throw in a
wind-up Grundig 23' antenna for portable use. Oh, have the original
manuals and packing. Let me know if you are interested.

You can on some of the older TVs that have those channels on them. The
newer ones do not of course.

Actually the antennas around Miami are used for signals all over the
world, not just focusing on Cuba.

wrote:
>Anybody have a listing of frequencies for the upcoming space shuttle
>flight ? How about more information on this topic ?
>Thanx!

Go here: http://www.amsat.org/amsat/sarex/shutfreq.html

Also:

Space Shuttle/Mir Radio Coms - As of: 8/23/98

(Sarex is now known as the Space Amateur Radio EXperiment)

Space amateur Radio experiment (Sarex) Downlink: 145.550 FM
This is for both voice AND packet modes. So if you hear short
bursts of noise they are in packet mode.

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Go here to get a list of shuttle freqs around the country:
http://www.amsat.org/amsat/sarex/shutfreq.html
If your in the NYC metro area try the W2FCL repeater in Northern N.J.
on 146.610. I pick this repeater up from about 100 miles away easily on an
Icom 2000H and a Ringo Ranger vertical up about 27 feet.

On HF, WA3NAN - the Goddard amateur radio club
re-transmits the missions on: 3.860 LSB (all freqs. in single side band)
7.185 LSB
14.285 USB
14.295 USB
21.390 USB
21.395 USB
28.650 USB

These are dependant on propagation! In South Eastern N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

Mir 2 meter FM amateur radio downlinks are currently on 145.800 (Europe)
and 145.985 in the U.S. These are for both voice AND packet radio.
So if you hear short bursts of noise they are in packet mode. They are
in packet mode most of the time, especially after 2000UTC.

(their 8 hour sleep period)

There is a ground control freq. of 143.625 FM that is sometimes
used as well, but NOT for amateur radio. I hope you speak Russian!

Mir is also now on 70 cm with voice downlinks on: 437.950
437.925
Packet downlink: 437.975

Happy listening!

Masataka,

Since *free* addresses of that sort are available from AMSAT, RAC, ARRL,
RSGB, etc., what is the value I'd get by spending money to associate
my call with "nobody-ever-heard-of-radiotelephone.net"?

I bought a scanner recently with a legitimate, but old, copy of Scancat Gold. The seller did not have the docs for the program and I'm having trouble getting it to install properly. The seller says there is some sequence of info that has to be entered in DOS (or at least that what appears to be the problem). Does anyone know what has to be done to install it? Would appreciate any tips you might have. Thanks.

I said intercept. Complete hacking is another story. I can intercept and descramble...but it would cost you over
$100,000. to do so. We have the Equipment here to do so, but it has many applications besides CATV theft.!!!!! You said
it was impossible. I said "NOT TRUE"!!!

Newsgroup: rec.radio.scanner
Date: 1998-10-26 00:00:00 UTC
From: Brian Webb <no-spam-bmwebb@tima.com>
Message-ID: <712jlasnk1@topsy.kiva.net>
Source record: 140341

Hi George,

What you are thinking is correct. There's been a misconception about the Pro-26 being able to pick up cell frequencies by a simple mod. In reality, the mod opens up a filter that allows images to be picked up better... a virtual downconversion mod. Except for European versions, the Pro-26 will not scan or search cell frequencies. One of mine has a SPST switch mounted right behind the headphone jack to turn the mod on and off... short between the two IC pins. It works well, but it's not in the same league as the 2006, or any other that can scan the cell frequencies directly.

Hope this helps,
Brian

No it wasn't John. It was right on the mark. If it had been incorrect you would have posted atleast 20 different messages applauding your find and proclaiming your greatness. Instead you were silent, stuck with the facts John.

A nice price. Don`t ya wonna by this descrambler Steve?? :-))
Its professional equipment not such homebrew-paper-box-stuff.
regards
odo

I would suggest going to Scancat's website at:

http://www.scancat.com/

Or e-mail them at: scancat@scancat.com

I have found them to be very helpful with my questions.

> I bought a scanner recently with a legitimate, but old, copy of Scancat Gold.

Message-ID: <712q5f$6de$1@news.indy.net>
Source record: 140351

Didn't have any takers on trading my Pro-64 handheld scanner for a TNC, so will sell it outright for $160.00 plus shipping. It is flawless, in the box, with the owners AND technical manual. Having a weakness for boatanchors, a Hallicrafters or Hammarlund may sweeten the deal...
Thanks,
Brad, NB9M

That is the obvious thing to do. However, since I bought the program used, I was hoping not to impose on them and ask for tech support.

Yeah, I know...that's just the way I am.

On Fri, 23 Oct 1998 16:27:15 GMT, "Victor Healey" <fourphun @ bellsouth.net> wrote:

Yeah, but with this philosphy, you would not be able to buy any product, as everything is already obsolete by the time you get the credit card out of your wallet. You can safely bet that in 2-3 years there will be faster, smaller, cheaper everything, with new standards to match.

But you do have some valid points regarding connectivity. That's, for example, why I prefer my new WR1500e to my old Icom PCR1000. It's not just performance and features but it has a PCMCIA port as well (in addition to the serial port). Works indeed great with laptops - and it's genuine Plug'n'Play - no installation needed.

Last time I looked Icom talked about plug'n'play in their PCR1000 avertizing - but you should sue them, as this is not the real Plug'n'Play as defined by Microsoft. Everybody who has spent hours trying to install PCR1000 (especially in the early days when the original software was so bug ridden that Japanese messages were popping up every so often) knows very well what I mean. Not that it got much better since, hence you need to rely on third party software.

Anybody out there know what the cops here in Portland use as a frequency for thier mobile data terminals. Is it part of the trunked system? Are they not using the MDC 4800 protocol? No luck so far, maybe someone can shed some light. Thanks in advance.

Hello everyone,

I have two magnet mount antennas on my car, one for the scanner (the radio shack one witht he two coils) and a cb antenna. I was wondering, if I hook both antennas together and then to my scanner, will I get better or worse reception? I am looking specifically for better reception in the 154 range

Here are websites with the best software that I have been able to find
for the ICOM Pcr-1000.

(Sorry ICOM, your software sucks)

This is Patrick Masotta's home page (This guy is my hero...)
http://members.tripod.com/~pcr1000/index.html

This is a cool site that has a program called "Pcrscope" Very nice
proggie!
http://208.133.53.38/pcr1000.html

This is another great site, for a great proggie. The program is called
"Talkpcr".
http://www.mahy.demon.co.uk/

Of course the list would'nt be complete without mentioning:
http://www.scancat.com
as soon as this guy gets online ordering, im gonna give him some buckies

for his great software.

PERcon corp : for spectrum32 frequencies and the ability to export to
.MCH files.
CD purchase only...
http://www.percon.com (I THink!)

A great DOS based PCR control program here:
http://www.bigbear.net/users/rransom/pcr.htm

These proggies I tried, and did'nt like (Or I could'nt get to work)
)-:
Visual Radio
SHOC radio

Come on guys! Get writing some more software!!! I need a free frequency
conversion program!
ICOM and these godd**n .MCH mother***kers!!!

Know of any good software for this neat little black box???

Source record: 140380

Yeah, I thought that would get your attention, and maybe even bring a smile to your face. But the issue itself is pretty serious, and hasn't really changed all that much. I just happened to look at a thread in here, started by an innocent poster asking where Bill was. Of course, John Mackey had to immediately respond (because the words "Bill" and "Cheek" reside in close proximity to each other on the subject line, I suppose) or else he might spontaneously combust. Typical stuff from the Scanner Queen Weenie.

But Foolio did two heinous and moronic things that really stick in my craw:

#1 Brought up an old, tired, dead, long gone topic, which could (and should) have been answered via private email so as not to disturb the flow of the NG (which he claims to care so much about - cough, choke)

#2 (By far the worst) Decided to take it upon himself to speak to this new user on behalf, and for, the rest of us. The nerve! The angst! The absolute gall of the sonofa....!

Okay. Deep breath. Ahhhhh. Calm... ok, continuing...

The other thing that really kills me about this stupid imbecile (Yes John Mackey. You) is he has to stick is ugly mug into every single topic and every single post that even MENTIONS Bill Cheek. No doubt, he'll respond to this one too, just to be consistent! Jesus H. Christ! Why the hell can't you shut your friggin pie hole for once, ya flippin Macktard! Don't you think that other people are capable of answering a simple friggin question, Beavis?

It's not enough that he drove off the one person who really and truly gave a rat's ass about our hobby. It's not enough that he complains to ISP's far and wide in a never ending effort to piss off the whole god damn world. It's not enough that he chooses to speak on behalf of all the rest of us over stupid bullshit but can't seem to share anything useful with this group. And it's not enough that he makes up fake aliases to rally support for his twisted idiotic newsgroup crusade.

Nope. He has to be a bold faced liar too. "Once Bill is stopped, I'll go away" he said time and time again, only to deny ever making such a statement when Bill finally left. Goddammit, but that really pisses me off.

John Mackey, I am going to state this here and now, so that it is on public record for all to see. And unlike you, I intend to hold true to my word:

I will no longer acknowledge your bozo existance. Flame, spit, whine, cry and snivel... it matters not. I will prove myself more mature than you by not participating in John Mackey wide world of dorks anymore.

I encourage everyone else who is sick of this crap, and wants it to end, to do the same.

Remember, "If you ignore it, it will leave."

Ahhh... I feel better already. ;-)

I do not live in PA or even close (I live in CA), but I might be ove some assistance. The only school that I show that is close to the name you gave, is "Lincoln Intermediate" and the frequency is 463.800

You might want to try scanning the following : 151.000-to-152.000 , 154.000-to-155.000 , 462.000-to-465.000 , and 33.000-36.000

I hope this helps. If you have any other schools in particular, let me know and maybe myself or someone can find the freq's for ya. Happy Scanning !!!!!!

```
Radio Shack PRO-43 Modifications FAQ
<Last modified December 1, 1996>
<altered sections indicated by * in TOC>

CONTENTS

* 1. Introduction
* 2. Out of the box frequency coverage
3. Which units can be modified for extended frequency
reception?
4. Companies that will modify the PRO-43 for extended
frequency reception
5. The modifications
extended receive 800 MHz (original mod + solderless)
* extended receive 6-1000MHz
keypad beep delete
improved audio
attaching an S-meter
400 memory channels
extended receive (30-68MHz for European model)
* 5. Some fixes
* Unit reset
* Freeing from lockup after all banks deselcted
------------------------------------------------------------
1. Introduction

As long as there is a continuing demand for it, this PRO-43
modifications FAQ will be posted every month or so. In large
part, it is the file PRO43.MOD from pub/hamradio/mods/tandy at
oak.oakland.edu .

The FAQ now includes mods for

(1) extended receive (800 MHz:
original mod + solderless)
(2) keypad beep delete
(3) improved audio
(4) attaching an S-meter
(5) extended receive (30-68 MHz for European model)

There is also a mod for 400 memory channels, but, to quote
its author, it is very complicated, should only be attempted
by someone with moderate to advanced electronics experience,
and is not for the faint of heart or the "weekend technician."
A brief description is included at the end of this FAQ. If
the mod were included in its entirety, the size of the FAQ
```

would be increased four-fold.
---
2. Out of the box frequency coverage

30-54 MHz
118-174 MHz
220-512 MHz
806-823.9375 MHz
851-868.9375 MHz
896-999.9875 MHz
---
3. Which units can be modified for extended frequency
(800 MHZ) reception?

Note: In the United States, it is against the law
(Electronics Communications Privacy Act of 1987, public law
99-508, amended 1994 by public law 103-414) to listen to
cellular or cordless telephone communications. However, it is
not illegal to own equipment that can receive or can be
modified to receive such communications, even though it became
illegal as of April 1994 to manufacture or import equipment
that could be easily modified by the user to receive cellular
communications. Equipment manufactured before the cutoff date
can continue to be sold until stocks are exhausted. While
businesses are forbidden from importing cellular capable
scanners for resale, the question has been raised whether an
individual can legally import such equipment not intended for
resale. The issue is not explored here.

Which PRO-43 units can be modified for extended receive?
The best information is that units sold in the US and Canada
can be identified by the following scheme

Modifiable | Nonmodifiable
|
serial number no A in # | begins with A
FCC-ID AA020-300 | AA020-300A

There have been rumors that the correspondence between serial
number and FCC-ID may not be perfect, that is, there may be
some units judged modifiable by the serial number and
nonmodifiable by the FCC-ID, and vice-versa. Anyone with a
such a unit should send a message to gdallal@world.std.com so
that the information can be incorporated into this FAQ.

Date codes: Inside the battery compartment is a paper label
containing the date of manufacture in the form "month A year".
For example, 5A3 is May, 1993. The cutoff date after which
units could no longer be modifiable is April, 1994 (4A4). So
far, the earliest reported date of manufacture of a
nonmodifiable unit is 3A4 (March, 1994). There have been *no*
reports of a modifiable US 3A4 unit. However, there have been

reports of a modifiable Canadian 10A4 unit; it did not have an A in the serial number.

Until the rumors surrounding imperfect correspondence between serial number and FCC-ID can be settled, it is better to check the FCC-ID. But be careful. All units have A's in the FCC-ID. Only nonmodifiable units have an FCC-ID that ends in A.

THE PRESENCE OR ABSENCE OF A FINAL 'A' IN THE FCC-ID
IS A DEFINITIVE WAY OF DETERMINING WHETHER A PRO-43
CAN BE MODIFIED FOR EXTENDED FREQUENCY RECEPTION.
IF THE FCC-ID IS 'AA020-300', THE UNIT IS MODIFIABLE.
IF THE FCC-ID IS 'AA020-300A', THE UNIT IS NOT MODIFIABLE.

It has been reported that some units currently being made for sale overseas can be modified for extended 800 MHz reception. However, it is not known whether this applies to all overseas units or, if not, whether there is a way to distinguish modifiable units from nonmodifiable units.

The PRO-43 was produced under two brand names. My 3A3 unit carries the Realistic name; my 12A3 unit carries the Radio Shack name. At the moment, it is not known whether this represented a changeover or whether both types were produced side-by-side for a time. It is also not known whether their electronics are different.

There are no software modifications for the PRO-43. It is not possible to extend the frequency range of the radio by pushing buttons on the keypad. Such modifications are possible with other models, such as the PRO-51, but *not* with the PRO-43. The PRO-43, made by GRE (General Radio Electronics) of Japan, is one of Radio Shack's few triple conversion units. Radio Shack scanners with software mods are double conversion units made by Uniden.

Modification procedures for other radios are available by anonymous ftp from the pub/hamradio/mods/<manufacturer> subdirectories at oak.oakland.edu.

There is some debate about whether step (5) of the extended receive modification is worthwhile. According to Bob Parnass, from his "Improved Audio Mod", below:

"Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage."

So, if you trash the diode in step 4 or want to quit while your ahead, don't lose sleep over it. On the other hand,

quoting ray_reese@tscnet.eskimo.com (Ray Reese),

When I purchased my PRO-43 and did the mod for adding 54-88 Mhz, using the removed cell. diode, I wanted to be able to listen to the sound carrier for the tv channels 2-6 as well as the 72-76 Mhz band. It is worth the trouble to make the mode and it does work well in my area, despite not having the correct coils for that band area. Do the mod anyway, but [if you've trashed your original diode], use a 1N4148 fast-switching diode. Perhaps a 1N914 might do the job also. They can be found at Radio Shack for a cheap price.

---

4. Companies that will modify the PRO-43 for extended frequency reception

If you'd rather not do the modification for extended frequency reception yourself, Cellular Security Group, 106 Western Avenue, Essex, MA 01929 (508/768-7486) will do it for $40, which includes insured UPS return postage. However, CSG will not move the diode to extend the low band to 88 MHz; they only remove the diode to unlock the 800 MHz frequencies. When CSG is mentioned on the net, two types of comments follow: testimonials from satisfied customers and comments from those with the technical skills claiming that the service seems high priced for just removing the diode. But, there have been *no* reports of shoddy work or damaged radios. (They've modified two of mine.) Units are processed within 24 hours of receipt.

Grove Enterprises' newly advertised Repair Service will perform the mod for $40 plus shipping. They will move (rather than just remove) the diode in units that can benefit from it, but state that there is no way to tell whether the diode should be moved without looking inside. They claim that the determination can not be made from the serial number, FCC-ID, or date of manufacture. For further details, call Grove at 704/837-7081. In order to get a unit modified, a service order number must be obtained from the same telephone number. Packages without a SO# will be refused.

---

5. The modifications

From: armille@afterlife.ncsc.mil (A. Ray Miller)
Summary: cellular (870-890 MHz) and low band (51-88 MHz) restoration for PRO-43

A few people have mentioned the cellular mod for the PRO-43; it turns out you should not remove but MOVE the diode. Doing so allows cellular coverage as well as low band (up to 88 MHz) coverage.

Acknowledgments to Grove Enterprises; this information came from them.
They are selling the PRO-43 for $300 which is $50 less than Radio Shack.
I have no connection with them other than as a satisfied customer.

PRO-43
Cellular Frequency Restoration and Low Band Expansion

Note: It is not lawful to monitor cellular or conventional mobile telephone conversations.

The following procedure requires familiarity with microcircuit soldering and will violate your warranty. Grove Enterprises assumes no liability resulting from its attempt, nor will accept the modified scanner for return under any condition.

TOOLS NEEDED: Fine point, low power soldering pencil; solder wick or a desoldering tool; pointed awl, hemostats or pointed tweezers; small Philips screwdriver; solder.

1) Remove the battery, antenna and back cover (held in place by four screws).

2) Remove the six screws holding the top circuit board in place. Carefully unsolder the two antenna connections from the board. Bend the antenna ground tab fully up from the board. Carefully lift the board, unplugging the black connector at its base, and lay the board out of the way on its bundle of colored wires.

3) Remove the two screws from the next board and lift it, carefully unplugging the white connector at the bottom of the board. Lift it up and lay it aside on its brown wire (which can be unplugged if necessary).

4) Unsolder and remove the metal shield from the final board, revealing the microprocessor; note the row of diodes labeled D1-D5 above it. Only diodes D1, D2, and D4 are present; assisted by a pointed tool, unsolder and remove D4, the lone diode (this restores cellular frequencies which will be searched in 30 kHz steps).

5) Resolder the removed diode carefully into position D3 to extend low band coverage to 88 MHz.

6) Reassemble the boards, paying particular attention to the alignment of the plugs. Test the radio by entering any frequency between 870 and 890 MHz (cellular) and 51-88 MHz (low band).

From: IN%"savage@dg-rtp.dg.com" 2-FEB-1995 17:55:07.31

BTW, I did something similar [to the mod that follows] but MUCH easier... No soldering, removing antennas, PCBs, etc..

Just open up the Pro 43 and look down on the bottom PCB from where the batteries usually lie. You'll see the diodes there. Simply take an

xacto knife and and break the solder on the D4 diode (left-most on mine) on the side facing you. I just cut back-and-forth for a bit. Once the solder (it's surface mounted) is weak enough, I just bend up the diode a bit from the PCB. Presto. I left mine hanging on the one side with solder. If you continue to work it a bit, you can probably remove the whole diode.

--Ed

From: springel@umich.edu (Jason G. Springel)
Subject: MODing a Pro-43 without soldering

I just purchased a new Pro-43 to replace my Uniden 200XLT after reading many of the praises for the Pro-43 on this newsgroup. I decided to try and MOD it, but don't have a lot of experience with a soldering iron. After examining the scanner's innards, I found it was quite easy to "fix" with nothing more than a minature philips screwdriver and some small needlenose pliars.

********** Standard Discalimer from other MODs:

1-It is against the law to monitor cellular or mobile telephone calls.

*****2-Procedures outlined below [DO NOT] require knowledge of microcircuits, soldering and assembly techniques.

*****3-You will [NOT] need a low-wattage soldering iron, solder and other various tools to help in the procedure.

4-The following procedure will void your warranty.

****
Here is my new MOD:

Step 1

Remove the battery, antenna, and back cover which is held in place by four screws. Place the scanner keypad-side down on your working surface.

Step 2

Remove the six screws holding the top circuit board in place.

Step 3

Using a VERY small screwdriver (I used one from a Radio Shack kit), remove the two screws from the lower circuit board. Looking down at the unit, you will see that the screw on right side of the lower circuit board can be easily removed. Remove the screw on the left side by by sliding the screwdriver between the top circuit board and the metal frame which holds the two boards together.

Step 4

With these two screws removed, you can now lift the entire top panel (antenna, volume, and squelch knobs) along with the top two circuit boards as one unit. The two circuit boards will be connected to the final circuit board (the one attached to the front section of the scanner) by several wires. Simply set the top panel/circuit boards alongside the front section of the scanner and you can leave these wires connected.

Step 5

The microporcessor is located under the large metal shield on the final board (the front section of the scanner with the display and keypad). If you look under metal shield from the side closest to the bottom of the scanner, you should see the row of diodes labeled D1-D5.

Only diodes D1, D2 and D4 should be present.

Use a small pointed tool to break off D4. You actually don't have to remove it completely (unless you want to use it to restore additional frequencies as explained in other MODs), you can just lift one side so it dosen't make connection and then put a small piece of tape or heat shrink over it, so it won't. Make sure it's not lifted to high or the boards will not fit.

This will restore Cellular Frequencies in 30 kHz steps.

Step 5

Reverse the process to replace the top panel/circuit boards and the two screws that connect the lower circuit board. Replace the 6 screws from the top board. Replace the cover, etc.....

...the diode positions on the cpu board, of which only three are filled look like this. Where X equals a diode soldered in place.

D5 D4 D3 D2 D1

O X O X X Normal configuration

O O O X X Cellular modification(D4 removed)

O O X X X Lo-Band modification(D4 in D3's place)

These directions were based on an original MOD design whose origins I do not know. My thanks go out to the original author of that MOD! Hope this helps those of you who do not own a soldering iron!

PRO-43 Shortwave & Extended Receive
Al Mellon N8KLI

ification is only possible on radios able to be modified to receive the full 800 MHz range.)

Scope and nature of the modification: To allow the PRO-43 to receive frequencies from 6 MHz to 1000 MHz. This is accomplished by setting the PRO-43 to non-standard splinter frequencies, the CPU will then step the radio beyond the normal band edges. To derive the non-standard splinter frequencies

it is necessary to change the diode configuration matrix, and to use the monitor-search function. The hardware modification should take about thirty minutes. The remaining programming / search will take as little as 45 minutes (depending on how interested you are in the signals you encounter during the 806 MHz to 30 MHz search to be run).

I made a few attempts to make deals with various radio mod shops. Most felt the time needed to make key pad entries was too long to make a profit.

< This is a lengthy modification. It can be found in its entirety in /pub3/hamradio/mods/tandy/pro43swl.zip at oak.oakland.edu and at http://204.134.124.1:80/kc5kto/pro43swl.html>

From: ross@novax.llnl.gov
Date: 19 Aug 92 16:51:08 GMT

Here is my keypad beep delete mod for the RPO-43:

1. Remove battery.
2. Remove back cover (4 screws).
3. Remove top board (6 screws, desolder two antenna connections and bend antenna ground lead up out of the way). Be careful of black connector at bottom of board. Flip board over and lay aside (wire connectors need not be disconnected).
4. Remove middle board (remove 2 screws and wire connector). Be careful of two multi-pin connectors along underside of board. Set middle board aside.
5. Locate 10 pin connector on side of bottom board (labeled CN3). Note that one end of connector has pin 10 labeled as such. Count back to pin 6 and bend pin 6 ninety degrees towards the large RF shield. Make sure the bent pin clears the RF shield.
6. Reassemble and your done OR do the cell mod since you are so close.

Have fun. Gary Ross >usual disclaimer>

Subject: Improved audio for the PRO-43 portable scanner
From: parnass@cbnewse.cb.att.com (Bob Parnass, AJ9S)
Date: Wed, 2 Dec 1992 01:15:35 GMT

IMPROVED AUDIO FOR THE PRO-43 SCANNER

by Bob Parnass, AJ9S

The Radio Shack PRO-43 scanner audio is too bassy.1 The lack of treble makes it difficult to hear the PRO-43 in noisy situations, especially while listening in a car or truck. Louis Shirley sent me a schematic and suggested I remove C341, a tiny 0.015 ufd surface mount capacitor.

I'm glad to report that removing C341 made a great improvement. The audio is now much "crisper," more like the Uniden 200xlt, although still not quite as loud. Turning the volume control up still overloads

the PRO-43's small, internal speaker, but there's less need to do that once C341 is removed.

The PRO-43 contains 3 printed circuit boards, and the middle (second) board contains the audio circuitry. Finding C341 is difficult, as it is neither marked with a value nor a component designation. It is located on the foil side of the middle board, under IC304, an LM386 amplifier IC. C341 is in parallel with, and physically next to, R350 (33,000 ohm). R350 is slightly larger than C341 and is marked 333. Both R350 and C341 are connected between pin 2 of the LM386 and ground.

A Note About 50-88 MHz Reception

Now that I have a schematic, I see that the European version of the PRO-43 has different coils and capacitors in the low (mid) band front end filter. That explains why the 75 MHz sensitivity isn't stellar after adding diode D3 to enable 30-88 MHz coverage.

---

1. See "PRO-43 Product Review," by Bob Parnass, AJ9S, in the November 1992 RCMA Journal.

Subject: S-Meter for PRO-43
From: schuster@panix.com (Michael Schuster)

Found this on the Fidonet scanner echo:

=====begin quoted text=================

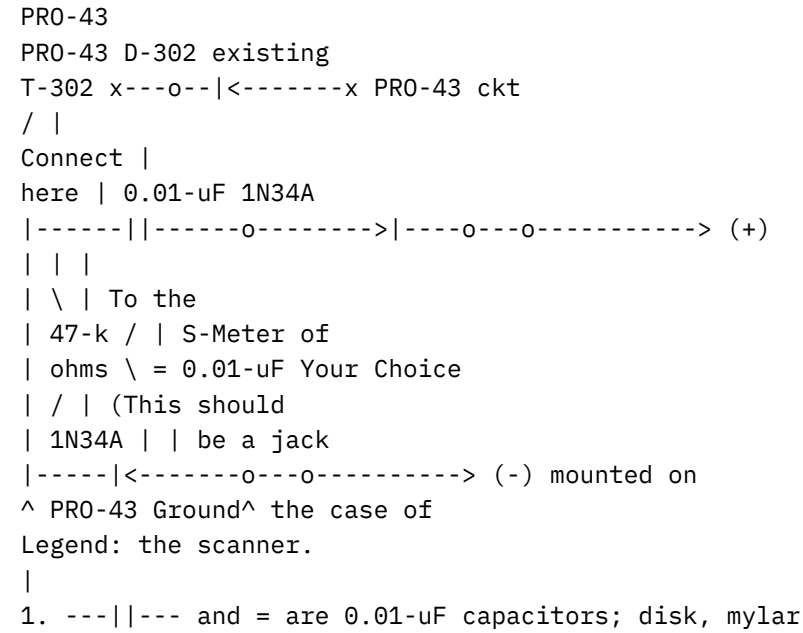
Date: 02-06-93 00:24
From: Bill Cheek
To: All
Subject: PRO-43 S-Meter!

Greetings Scanner Fans!

It had to happen! The fundamentals for an S-Meter exist alive and well in the PRO-43! Only a simple circuit and your choice of meter, analog or LED, is required for a jim-dandy S-Meter function!

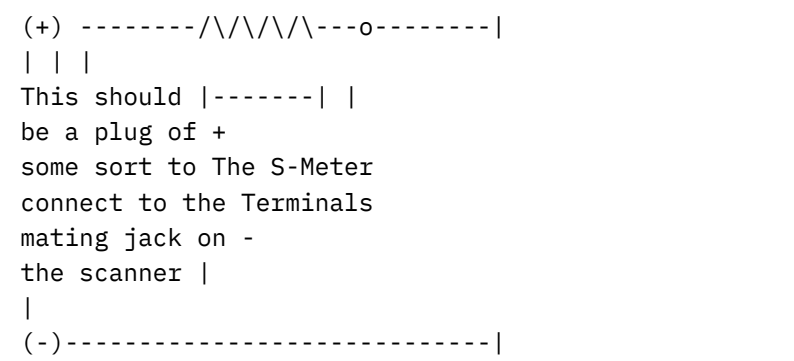
The key point in the circuit is the cathode of D-302 located on the bottom (solder side) of the AF Board (middle board). You will need the Service Manual for the PRO-43 to find it as it's not marked and it would take me 10,000 words to guide you to exactly where it is located. Call Tandy National Parts at (800) 442-2425 to order your manual: approx $10. Now here is the deal:

Locate D-302 and either build the following circuit right there on the back of the AF board in the vicinity of D-302, or solder a wire to the cathode of D-302 and route it to somewhere else more convenient to feed the below circuit. This wire ought not to be very long, though, say not more than a couple of inches. Refer to the ASCII schematic diagram as follows:



PRO-43
PRO-43 D-302 existing
T-302 x---o--|<-------x PRO-43 ckt
/ |
Connect |
here | 0.01-uF 1N34A
|------||------o-------->|----o---o-----------> (+)
| | |
| \ | To the
| 47-k / | S-Meter of
| ohms \ = 0.01-uF Your Choice
| / | (This should
| 1N34A | | be a jack
|-----|<-------o---o----------> (-) mounted on
^ PRO-43 Ground^ the case of
Legend: the scanner.
|
1. ---||--- and = are 0.01-uF capacitors; disk, mylar, monolythic, chip
|
2. --->|--- and ---|<---- are germanium diodes, 1N34A
| is cathode
< is anode
3. o means a connection, preferably soldered
4. The 47-k resistor is self-explanatory, I hope.
5. -------- and | are wires/conductors.
|
|
6. x is existing PRO-43 circuitry

If you use an analog meter, preferably a real S-Meter like salvaged from an old junked CB rig, then rig it as follows to connect to the circuit above:



You can also build the 10-segment LED S-Meter as shown in Volume 2 of my SCANNER MODIFICATION HANDBOOK, available from leading mail order radio dealers everywhere. ISBN 0-939780-14-3 published by CRB Research Books, Inc. Commack, NY.

After connected and working, locate the PRO-43 very near a known strong transmitter, perhaps a ham transmitter, a police cruiser, your favorite security guard's handheld or right next to a cordless telephone, or anything else known to transmit a strong signal. Tune the scanner to the frequency, and adjust the 5-k trim pot above so the meter reads exactly full scale. All other signals will read proportionally lower to yield "relative signal strength" measurements! A hell of a circuit here, boys & girls! Have fun!

Subject: PRO-43 w/400 CHANNELS HERES HOW!

IT IS NOT FOR THE FAINT OF HEART however.

PRO-43 ENHANCEMENT
MEMORY EXPANSION & "FADE-AWAY" LIGHT
Brett Bennett 4/12/94
bbb@kuhub.cc.ukans.edu
Copyright 1994 B&D Electronics All Rights Reserved

INTRODUCTION

The following document details two enhancement modifications that are possible on the Radio Shack PRO-43 scanning radio. The first modification doubles the factory standard memory capacity, allowing you to enjoy an additional 200 channels of memory, plus 10 more monitor memories. After completing the first modification, it is a fairly simple matter to add a 7 to 10 second delay feature to the LCD back-light lamp circuit. I designed and performed these modifications on my PRO-43 and they do work. As I understand it, there (has been/is being) presented in WORLD SCANNER REPORT a similar memory expansion. I have not seen this modification and for all I know it is a better way of doing it. What is presented is a 'clean-room' design of my

own that to the best of my knowledge is the only one to also offer a time-delay for the LCD back-light. Having said that, let me say:

I ASSUME NO RESPONSIBILITY FOR ANYTHING THAT MIGHT HAPPEN TO YOUR RADIO SHOULD YOU OR ANYONE ELSE ATTEMPT THESE MODIFICATIONS. WHILE REASONABLE CARE HAS GONE INTO THE PREPARATION OF THE FOLLOWING DOCUMENT, I CAN NOT GUARANTEE THAT THERE ARE NOT ERRORS.

The procedure described below is very complicated, and involves the soldering and desoldering of very tiny components and the cutting of printed circuit board traces. While the procedure is not irreversible, it will leave permanent scars inside your scanner. It should only be attempted by someone with moderate to advanced electronics experience. I don't think it should be attempted by, to quote someone else, a "weekend technician." If as you read through this you feel intimidated by the jargon and required procedures or if an electronic schematic looks like a strange piece of modern art to you, then this might not be the 'mod' you are looking for. The following document will assume you have obtained the materials listed below, especially the Service Manual, and you have studied the circuit in some detail. I will not describe in great detail where every component is or where every solder point on the logic board should be placed. Having the Service Manual, and having studied the drawings therein will allow you determine to where it is I refer.

REQUIREMENTS

1 - PRO-43 Service Manual. (Tandy Parts # MS-2000300 - approx. $6.00)
1 - CD4053 - Triple - SPDT analog switch - Surface mount package (DigiKey #CD4053BCM-ND - approx. $1.50)
2 - 93C67 EEPROMs (Tandy Parts # MX-8050 - approx. $13.00/each)
1 - 100k x 5 resistor network. Common lead type. (DigiKey # Q5104)
1 - UN2111 PNP transistor (Q1 on Logic PCB. Tandy Parts #)
1 - 1 uF 16v capacitor.
1 - 10 MOhm 1/8-1/16W resistor.
Misc.:
Wire wrap wire-30 gauge. (Radio Shack)
Grounded soldering iron with approx. 1/32" tip or smaller.
Desoldering Equipment.
Digital Volt Meter. (Used to double check your VCC and Ground connections, pre-check switching assembly)
Utility knife with fresh sharp small blade. (Needed to cut traces.)
Strong hand held magnifying lens. (Needed to check solder joints.)
+5-10 Volt bench power supply. (Used to check switching assembly.)
Anti-Static work place and grounding wrist band.
Very fine needle nose pliers, wire cutters.

From: IN%"millingtoj@oldhamlrd-po.oldham.gpsemi.COM"
"John Millington" 17-DEC-1995 04:55:31.71
Subj: RE: pro-43

The European Pro-43 comes with a diode in D1, D3, +D5.
Remove the diode from D5 and solder it in position D2.
The scanner will now cover 30-68Mhz.

Usual disclaimer.

---

6. The fixes

Unit reset (from the owner's manual)

If the keys do not work and the display is random, while
holding down the CLEAR and 0 (zero), turn the power on to
reset the scanner. Note: This clears all the information
Stored in the scanner.

From: IN%"randyrho@nauticom.net" "Randy Rhoades" 14-NOV-1996 00:13:32.24
Subj: Pro-43 Lockup Fix

Several months ago, the unit "locked up". When the radio was turned
on, nothing appeared on the display but the light button worked.
<RS repaired it, snipped>

It happened again.

<RR reports . . . [Before doing this, first try the reset above. GED]>
The problem seems to be in the software. The PRO-43 seems to forget
how to operate if all banks are de-selected. The software prevents
the operator from deselecting all banks but on rare occations this
routine fails. There seems to be no way to recover from this without
surgery. If you know any other way, please let me know.

THE FIX

There are lots of mod articles around describing the disassembly of
the PRO-43 so I'll omit it here. Disassemble the scanner down to
the CPU board and remove the metal shield. CAREFULLY lift pin 3 on
IC 2 so it no longer makes contact with the circuit board trace.
Reconnect the radio module to the CPU board, hold the back cover
in place, and insert the batteries. Turn on the power. The display
will look a little odd, but it will be apparant that the unit is
scanning. Press the number 1 on the keypad until the scan indicator
on the display shows band 1 is operating. Turn off the power and
disassemble the scanner again. Re-solder pin 3, replace the shield,
and reassemble the scanner. It's fixed !

The only trouble with the procedure is that all of your programmed
frequencies are dust. Just reprogram and thank God it works again.

Glenn Mitchell <gmitch@ktb.net> questioned:
> Would they go by federal law on a military base?

Depends if it's a Federal Reservation. At a base where I was once stationed it occasionally happened that new personal would try to outrun a state trooper to make it back to base. They were shocked when the gate guard flagged them down, then waved the trooper in to write the ticket. The base property was leased from the state, and all state laws applied. I needed a state license before I could store my personal weapons in the armory (admittedly, the state license was easier to get than my commander's sign-off on 17 handguns <g>).

It would probably be simpler (and safer) to get a no-code tech license than to try to hide the scanner (all states exempt hams from their scanner laws).

Message-ID: <7117sn$is1@bgtnsc02.worldnet.att.net>
Source record: 140404

It may, but I have a cheap solution for you. Just make a long wire antenna. Solder an appropriate connector onto the end of some wire, preferably insulated 14-24 G, and run as long a length as you have room for. 50 feet would probably do better than you will ever need. For some more good ideas, check out:

http://www.geocities.com/CapeCanaveral/Launchpad/3652/amandx.html

This is where I got my plans for antennas. Though they are for shortwave, they are excellent for general scanning. I think trying one out would be worthwhile. Pay attention to the hockey/broom stick antenna if you want one for completely indoor/portable use.

Just my thoughts.

> using the Pro-90. Any and all help would much appreciated.

If it is a "spread Spectrum" or "Digital" phone - forget it. You
wont pick up anything useful. A "buzz" or pulsing sound at best.
Nothing understandable.

Also, you should know that in the US, it is *illegal* to monitor
any radio-telephone-type calls - cordless or cellular.

With that said, there are 25 channels allocated for 46/49MHz
cordless phones - and 900MHz phones have a very wide selection to
choose from - but usually centered around 905MHz and 925MHz.

Read the monitoring information at this site:

http://anansi.panix.com/clay/scanning/index.html

And the frequency range is available from:

ftp://oak.oakland.edu/pub/hamradio/docs/misc/scanner.faf
http://www.wvadventures.net/home/iggy/900mhz.htm

Cheers,
Paul Grohe

This is supposed to be a "free market" society. As such, don't buy Radio
Shack's scanners and maybe they will get the message. Then again, there
is not exactly a "brain trust" at RS. Remember, these are the guys that
brought you "Incredible Universe" and "Computer City" both of which have
taken a big dump. Nuff said?

The Sony will not support ReactionTune with the Opto Scout.
The AR8000 can be had for under $400. But can you take its
poor construction and complexity?

The R10 is very quirky and slow but extremely well made.
It's currently on sale for $429 I believe.

The AR8200 is a fine radio but still undergoing "tweaks"
by the manufacturer. I'd hold off a bit if you decide to
go this route. Best price these days is $549 I believe.

For reviews of all of these radios, stop by my web site
below. Good luck!

Here's a list of those in today's playing field:

http://www.strongsignals.net/htm/manufact.htm

For some help deciding, try my Picking A Scanner/Receiver page:

http://www.strongsignals.net/htm/pickrecv.htm

There's a lot of questions you'll need to answer first. Once
done, you can then narrow down your choices to just two or
three probably. You should find a lot of what you need at
my site listed below.

Happy surfing!

Source record: 140420

>How come the trunktracker handi does NOT have 220 nhz, and the base does
>cover
>>it?

BECAUSE it't costs more money to build in the additional circuits & filters
nessessary to cover additional freqs. & Uniden made a judgement call to keep
the first handheld Trunktracking scanner's cost down. It would have been nice
to have FM broadcast band & CB channel recieve also in the unit.

Hi, I just picked up a PRO-26 and was looking at Ross Voorhees mods for Cell phones on this scanner. I was excited til I got to the point about programming in 360 and 385MHz in the search limits. Does this mean that after making the modification to the PRO-26 that I will lose the MilAir frequencies between 360 and 385MHz???? Anyone with this scanner and cell phone mod please leave me know as I value the ability to receive MilAir over Cell Phones anyday. I have several PRO2006's that can receive "all".... Thanks, George http://www.flash.net/~av8tor

>that previous message. I must have lost a day in there somewhere. Sorry.

No. You didn't "miss" the part where I already told you this... somehow
I missed the part where I claimed to have already told you this.

I simply pointed out that the person who did pass this RUMOR on to
you, failed to realize that there is a distinction between DETECTOR
and JAMMER.

Although I am surprised that you took your share of the research so
lightly considering you're "not taking this rumor lightly." Simply
wasting a few seconds and entering the word "RADAR" into the California
legal server looking for legislation which has been passed into law
would have turned up this NEW LAW.

2430. Newbie Question? Modification to get Cellular?

Newsgroup: rec.radio.scanner
Date: 1998-10-26 00:00:00 UTC
From: mach5mike@aol.com
Message-ID: <19981026105228.18012.00001183@ng-fc2.aol.com>
Source record: 140426

I am TOTALLY new to the scanner scene so please padon my ignorance.

I am looking to purchase a scanner. I can get a good deal on a Uniden BC253XLT and a base-type RS Pro-2050 scanner. I know that neither can receive cellular calls. Can these be modified to receive them? How would I know if a scanner can be modified to receive cellular, or is alredy capable (by model # or year manufactured?)?

Can I get a scanner to recieve cellular AND have trunking capability?

Any other info on purchasing a scanner for the first time would be appreciated?

Also, Is an almost-new Pro-2050 (with trunking) a good deal for $125?

Please respond to my e-amil address below.

Good question. I've never heard of any fixed repeaters on the extender freq...and as you suggest, can only depend on hearing them near CHP offices (and coffee shops of ANY quality). What area are you in/do you regularly hear them??

you DO NOT need a trunk tracker to listen to St. Paul or Minneapolis or anyother public safety angency in the area there are very few trunked systems in the twin cities.

Ask the guy at Radio Shack if he knows what a trunk tracker does.

kendric wrote:

"Nick Stanley" <stanley@mail.fwi.com> asked:
> Does any one know the "color dot" Frequencies?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 itinerant "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 GMRS Red Star 467.900
Black 462.625 GMRS Blue Star 467.925
Orange 462.675 GMRS
Brown 464.500 itinerant
Yellow 464.550 itinerant

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Additional itinerant frequencies include 27.49, 35.04, 43.04,
151.505, 158.400, 451.800, 456.800, 469.500 and 469.550 MHz.

> "none" of my posts have ever been on topic. This is totally WRONG!!

Yeah right .... highly unlikely (if not impossible) Toilet Boy can resurrect that many "on topic posts" because they simply don't exist. Here is the proof compiled several months ago after Toilet Boy demanded such.

We're waiting ....

R E A L I T Y C H E C K

Definitive data on the posting history of Toilet Boy (aka Mackey). Edited for the more salient point(s). Compelling nonetheless.

SNIP --- Data From Smally ----

I have nothing else to say except that, out of curiousity, I searched the archives at Dejanews to see how much John "contributes" to the group. I found some 13000 posts in all in the scanner newsgroups since he arrived. THIRTEEN THOUSAND!!!!!!!!!!! Yet the on topic posts he has made can be counted on one hand, with room left over. Case closed, folks. John Mackey is the problem. Guilty as charged.

I have done it folks. I have accomplished what I set out to do. I have proven what the Clown Prince of Scanning is really all about: A personal, neverending vendetta against Bill Cheek.

SNIP ------ Data From Kindricks ------

Date	Mackey	Cheek	Kendrick	Bowers	Vetterle	allsafe	K4CC
JUL 98	413	386*	6	32	28	75	234
JUN 98	413	502*	0	64	45	97	95
MAY 98	22	208	0	11	8	12	12
APR 98	194	128	27	41	25	12	0
MAR 98	254	240	49	24	50	18	0
FEB 98	200	274	51	27	46	18	0
JAN 98	173	178	35	1	33	33	0
DEC 97	149	227	32	0	16	1	0

NOV 97 | 63 | 65 | 1 | 0 | 10 | 0 | 0
OCT 97 | 48 | 60 | 0 | 0 | 8 | 0 | 0
SEP 97 | 181 | 78 | 0 | 2 | 4 | 0 | 0
AUG 97 | 29 | 2 | 0 | 1 | 2 | 0 | 0

TOTALS | 2139 | 2348 | 201 | 203 | 275 | 266 | 341

Consider this point. Less than two dozen of the total posts by Mackey
pertained to scanners or scanning. Approximately half of the posts
made by Bill Cheek were devoted to scanners and scanning. Now go back
and look at the numbers again. You do the math.

Program 126.000 into channel 1, only open bank 1 leave the other 9 banks unselected. LOCKOUT channels 2-20 in bank one. This way you will only be able to monitor Ch1 126.600 and won't miss any of the conversation. You could always just hit manual on the kepad and keep the scanner from scanning, either way would work.

TJ,
If all you want to listen to are local trunk freqs, a simple 800 mhz rubber duck type antenna should do. If you want to pull in distant freqs and other than trunks, you will probably have to improvise. I don't have a Radio Shack catalog handy, but you might describe the situation to one of their salesmen and hope he/she has some experience and can help. Maybe someone else will have a good idea.

Try these:
453.2250 or 460.1250

That was all I saw listed in my Spectrum Database. Another place to look (and if you don't have one yet, shame on you, go get it right now) is the Southwest Frequency Directory by Dan Rollman (who just happens to reside there in Tucson). You can find it at most ham shops for about $20.

Look at the BC3000XLT from Uniden. It'll do it, but you'll need to do some shopping around to get one for $300 bucks. Still, I think it's your best bet for CB as well as Military Air, which will be the next thing you'll want, trust me. You can look it over at:

> manufactured?)?

Neither of those guys can. At least not cheaply and certainly not easily.

> Can I get a scanner to recieve cellular AND have trunking capability?

Well, yeah, but again, it isn't gonna be cheap and it isn't gonna be easy. IF you can get your hands on someone's "Bill Cheek Special" PRO-2004/5 or 6 modified with a discriminator tap, AND modified for cellular, AND connected to your PC with a data slicer (did I mention that you've gotta either buy the data slicer too, or make it yourself? Money, money, money...) AND get/install/configure/run a freeware program (thank god SOMETHING here is free) from the net that may or may not work with your PC, then, sigh, yes you can have it all in one box (boxes, actually). I don't know about you, but I don't have that kind of free time anymore.

> Any other info on purchasing a scanner for the first time would be appreciated?

OK, my advice would be to forget about cellular for now. You'll have your hands full just learning about trunked scanning, because it ain't as easy as it sounds. Study up on trunked systems and visit a uniden dealer to show you how the whole thing works. The BC235XLT is an excellent first scanner, but there will be times when you're gonna wanna chuck that thing into a desk drawer and forget about trunking. It can be really frustrating, especially when your local TRS was installed and configured by trained monkeys (like the Scottsdale AZ system was, I'm betting) Lindsay Blanton has a great home page devoted to trunked systems, check it out too.

> Also, Is an almost-new Pro-2050 (with trunking) a good deal for $125?

Depends on what people consider "almost new". For your first scanner, I'd get one that IS new. You'll be much happier with it.

Good luck, and remember, it's supposed to be fun.

2459. Best Freqs for Cross Country drive?

Newsgroup: rec.radio.scanner
Date: 1998-10-27 00:00:00 UTC
From: Dick Williams <rjw@sky.net>
Message-ID: <Pine.GSO.3.96.981027105606.405A-100000@sky.net>
Source record: 140240

Last week I made a 2300 miles trip from Kansas City to Portland by way of Denver, Grand Junction, Ely NV, Reno and Medford OR. Even took the "lonliest road in America" - Highway 50 across Nevada. Had my Pro 64 and once out in the open country of the west tried out various searches for some scanner traffic. The air bands are actually pretty routine after a while - found some "better" stuff in the 459 mhz area - air to ground somms from biz jets I guess.

Never did tap into much in the way of trucker traffic - thought I'd find some on their company freqs but didn't do any good with that. Wonder waht some of the rest of you look for out in the west when you're in open country between cities. Could usually bring up some local dispatch traffic in 154 to 155 band. I keep all the AAR rail freqs on scan - that's decent if you're on a rail line.

Dick Williams rjw@sky.net

> performance?

Yes! The trunktracking capabilities alone are awesome. Then theres computer control, military air, 300 channel capacity, etc. And now they can be had for as little as $200. Too cool...

> Is there a place to tap the discriminator for baseband audio out? I
> have read that there is but I haven't seen anything that says there
> definately is. I think I read it was a tap on IC2 or IC3.

I saw a post about a month ago that shows a better location (of course I don't remember where). Dejanews should have record of it. I have tried pin 9 of (I think it was) IC3 without success, but then I'm all thumbs with a soldering iron anyway.

> I know it wont receive cellular and I would assume it can't be
> modified to do so. Does it receive cellular images like the BC-3000XLT
> does?

Mine receives them in VHF Air and VHF Lo if conditions are just right... damned annoying sometimes! Most of the time, it doesn't happen though, and when it did I had a high gain antenna attached.

> Is there any good software for controlling the scanner?

Well, I wrote it, so I'm not very impartial, but I wrote (and use) PC895 which is available at http://www.mghusa.com/scanner/pc895. The best feature is the price: it's free.

If you don't like it (I'll be really offended - no, just kidding! ;-)) you can try Freetracker also. It's available on a bunch of sites, and it's also free.

> If there is a BC-895XLT web site please point me to it.

Well theres always www.trunktracker.com. I also recommend Lindsay Blantons homepage. (sorry, can't remember the URL - another case for Dejanews)

Hope that helps out,
-Phil

Several years ago I followed the scanner forum on Compuserve. I think at that time there was more activity there than on either of the duplicative NG's. Then I lost interest in scanners for about three years. I came back to find the quality of the traffic to be on a much lower technical plane than it was in, say, 1994.

The quality of the flame wars has gone down too. And it's GOOD flame wars that keep smart people coming back to a NG or forum. We can't always get Starr vs Clinton quality, but we expect a little intelligent throat slashing.

Bill Cheek added a touch of color to what would have otherwise been, and has now become a fairly drab scene.

Cheers
Richard

A dipole made with a regular 75 ohm to 50 ohm tv converter (my terminology is off, but your local RS guy will know what I mean) and 75 ohm cable attached to 18" and 48" lenths of wire will work quite well, and can remain quite inconspicuous. This is similar to the antennas that are sold in the Grove catalog, and you can make your own for under $15. This antenna works quite well for me, and I have two of them in my tiny room. Definetelly worth making, and they will save you a lot of money. The magmount idea listed later in this thread also works quite well, but you need to mount in on something large and metalic (such as a file cabinet) for the ground plane part of it to work. Also, I found that the dipole performance is superior (and cheaper), so choose at your own discretion.

I know that handheld CB radios with rubber duck antennas don't receive well unless someone is very close (1 mile or less urban areas) or using some extra power to transmit. Why would a hand held scanner with a rubber duck antenna be any better?

How about:

"You've got questions, and even if I knew the answers, I wouldn't tell you any way."

That's pretty much the attitude of some of the lazy droids that I have encountered lately.

Your reading the most popluar scanner newsgroup.
There also is alt.radio.scanner but it isn't used as much. If you are
interested in buying or selling scanners, two way radios, ham radios, or
other stuff like that, then try rec.radio.swap and you will find a quite
active newsgroup. Its the one I check the most.

2490. AOR-8000 Broadcast Band Antenna Otimization - Techncal Inquiry

Newsgroup: rec.radio.scanner
Date: 1998-10-27 00:00:00 UTC
From: rjlasky@ibm.net
Message-ID: <36364ef4.88124042@news-s01.ny.us.ibm.net>
Source record: 140271

Challenge: design a 20 inch whip antenna to work well in the US broadcast band frequencies.

Background:
I have an AOR-8000 scanner that works well at most frequencies. However, as admitted in the instruction manual, the unit receives poorly on the US broadcast band. I guess the small inernal loopstick picked up LCD noises. In CT USA I can only pick up 2 or 3 local stations. My $20 Radio Shack Mini-AM radio works better.

In an attmpt to get the unit to perform better I connected one side of the loopsticks coil directly to the BNC center terminal on the rubber duck antenna. Now, when I put 15 feet of hookup wire on the BNC connector I Get Great Results! I get the local stations and stations from 300 miles away.

Problem: I dont want to carry around a 15 foot long-wire antenna everytime I want to scan the broadcast band.

Question:
Can I put a loading or matching coil or capacitor at the bottom of a 20 inch telescopic whip antenna and have it peaked for reception of the 530-1700 khz band? I wouldnt mind making a bottom loaded section to the antenna.

What kinds of values or connections can I use to make a 20 inch whip perform fairly as a broadcast band antenna? My car radio antenna is 24 inches long and it picks up great - what are they doing inside to make it work out so well??

Could I use a second loopstick antenna outside the unit somehow? Could I wrap 200 turns of litiz wire on a core or rod to make a special antenna?

Why do my ham radio fire stick antennas work so well when they are all about the same length - It seems like it is the coil and capacitance combination that makes them perform well at different frequencies.

Where can I go to find out how to make such an optimized antenna? Any sites?

Also Note: The 15 foot wire picks up great, but it pickes up even better (almost full scale) if I put my finger on the BNC connector - maybe im becoming a counterpoise.

I dont mind getting technical or having to construct coils or build BNC tubes.

If someone knew to put a 365mfd variable capacitor in series with a 1/4 inch 26guage 30 turn coil tapped 5 turns from the bottom, that would be great!! Thanks for your expertise.

Ray
rjlasky@ibm.net

I am generally pleased with the AR8000 sensitivity on most bands, however, in the US broadcast band the manual states that BCB reception has some limitations. That is an understatement.

Here in Connecticut USA I had difficulty receiving more than 3 local stations with the internal ferrite bar. Putting a long wire on the BNC connector did not help greatly either. I did the ferrite loop optimization routine in the service manual and received only modest improvement by moving L2.

What I eventually did was to connect point J2 on the ferrite bar coil and to place a short jumper between it and the regular antenna center conductor at point J1. This brought the radio to life - and now it is possible to hear stations in Boston and Philadelphia and Washington with a piece of 15 foot hookup wire as an antenna.

Now I have another technical question - Is there some sort of series "loading capacitor or coil" arrangement I can use to optimize a regular telescopic whip antenna to better tune the 530-1700 khz region. For example, my car radio only has a 24inch antenna and it picks up great. I want to design a custom, base loaded, handheld, 20 inch whip so I can get rid of the 15 feet of hookup wire.

If I cant get a whip to work good, how about another external, loopstick antenna from another transistor radio?
What would I get if I tightly coiled 25 feet of

"litiz" wire on a core or ferrite bar? Any chances there?

Oh, by the way, when I put my fingers on the ground part of the BNC connector with my 15 feet of hookup-wire antenna - It enhances reception somewhat more so I can get almost full scale S meter readings on most stations. This is why I also think there may be some matching issues - or solutions

Thanks,

Ray

Yes it is John. Only youYOU would disagree but that is not the discussion.
You were responding to my questioning your admission of a pertinent part of
a quote you used in your post.

Your reply;

>I left it out because it was incorrect

So what is incorrect in the following John?

********** START **********

| Mackey | Cheek |

TOTALS | 2139 | 2348 |

********* PART JOHN LEAVES OUT ********

Consider this point. Less than two dozen of the total posts by Mackey
pertained to scanners or scanning. Approximately half of the posts
made by Bill Cheek were devoted to scanners and scanning. Now go back
and look at the numbers again. You do the math.

********** END **********

What is incorrect John?

Any external antenna will "work" ifyou have the correct connectors.
However if you have a few spare dollars you can get a scanning aerial from
Dick Smith stores. These aerials are cut to the correct frequency and
offer better gain than an old CB aerial that is cut for 27Mhz.

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.

I had the same problem-think it is in the charging circuit, boxed mine up, wrote a letter explaining my problem, and sent it to Yupi in Japan. Received a letter a few weeks later (in English), reporting that my radio was fixed and included shipping to the US....sent a postal m/o, received the radio on Christmas day of '97. Kept the radio for a few months, problem occured again, and decided to sell it. Good radio though.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello,

Anyone who might be interested in Kansas and Military Aircraft frequencies might want to check out my scanner page. I've recently updated it to include many more frequencies and information. The page is at http://www.geocities.com/ResearchTriangle/Lab/1145

On the page, you find Kansas frequencies for McPherson County, Harvey County, Saline County, Sedgwick County, KS Highway Patrol, Repeaters, and some misc freqs along with a large 10-CODE listing.

On the MILAIR page, you find freqs for Smoky Hill Bombing Range, McConnell AFB, Fort Riley, Forbes Field, MOA's, chit-chat freqs, USAF High Alt, Space Shuttle/MIR, and frequencies for every refueling route (primary, secondary, entry, and exit freqs). I've also included a MILAIR Glossary which can be quite handy. Thanks.

rechargeable batteries basically suck to start with. I go to a local battery specialist in town and buy those high capacity AA's in bulk. They are quite reasonable, and as they possess a higher milliamperes rating than rechargeable will last longer anyway. Besides, I never did like waiting for the damn things to recharge anyway. LOL

2537. Making Antenna Out Of DSS Or Amplified Antennas

Newsgroup: rec.radio.scanner
Date: 1998-10-27 00:00:00 UTC
From: smurfyou14@aol.com
Message-ID: <19981027101443.17260.00000042@ng125.aol.com>
Source record: 140320

I recently messed around with a crap load of parts in my house and found a way to reach miles and more from home using my DSS. If you want the plans to this e-mail me and if you dont have these parts in your house it will cost you about $2.50 to do this or less (With exception to not having DSS then it will cost you about $252.50) Also this little box works great with amplified and portable rabbit ears. You can buy all your parts at any T.V. or Radio store.

I don't believe he meant realtime, he just said intercept. I
interpret this as getting a bunch of data, and decrypting it. My XT could do
that, if you had the thousands perhaps millions of years to wait. Real time
does also exist, however the equipment needed is horrendous. Thats why the
more interesting hacks do not use brute force methods, they do it through
other means. TTYL

Easiest and Cheapest Solution:
1. Parts Needed:
a: Small Finishing Nail
b: Thin Copper Wire

2. How to:
Take b and attach to a insert a into antenna port and take b and attach to bigger antenna its not pretty but it will work if you want more efficent and prettier look e-mail me and ill give you a better design that will run you a couple bucks from your local Rat Shack.

Ahhh, another fellow apartment dwelling scannist. Yeah, landlords just LOVE us don't they?

Seriously, you've got no attic and can't hang things out the window so your options are limited, but I think your best bet is to go get a high gain dual band mag-mount ham antenna, from a real comm shop, like Ham Radio Outlet or something of that nature, forget the cheapo RS crap. You want one that will do around +5dB gain. I have one hooked up to my BC895, and my results have been excellent. It's about 2 feet tall, so it'll fit just about anywhere and they usually come with a nice long cable so you can position it anyplace you like. It'll set you back about $45 bucks, but it's well worth it. Don't use it mobile though, you'll pick up all sorts of unwanted noises. For mobile, go with no more than +2dB gain, trust me on this one.

-Phil

Like any other company, there are always some folks that seem to get the short end of the straw with their products. I have been buying Icom products since the IC-22 first came out. (30 years ago?) Even now I have an IC-711, IC-745, IC-736, IC-28H, IC-24AT and a ton of optional equipment for them. The IC-711 is 20 years old and works perfectly. It was the first multi-mode 2-meter transceiver ever manufactured. Not one piece of Icom gear has ever failed me. Never have had a problem with my TM-741 and TM-732 Kenwoods either.

I would still like an answer on the IC-R10. Thanks.

Highly recommended agreed. But most scanner enthusiasts already know this. So let's
all try to keep quiet and communicate only by private e-mail, and keep this
stuff off of the public news groups.

2556. buying scanners from canada (or the uk)

Newsgroup: rec.radio.scanner
Date: 1998-10-28 00:00:00 UTC
From: "Robert W. St. G. Fisher, IV" <fisher@radonc.unc.edu>
Message-ID: <3637737A.69B3F28D@radonc.unc.edu>
Source record: 140089

What's the latest consensus on purchasing scanners or wideband receivers from canada or the uk? I'm not particularlly interested in a non-cellular blocked scanner, but I have seen some good deals on a few radios I'm interested in (esp. considering the exchange rate). What I don't want is a lot of hassle just because I'm getting a radio from a non-US source.

Thanks!

Haha, 20 mesage-id's would hardly be a waste of any bandwidth!

Considering the fact that you have made 14000+ posts in two years and
less then a dozen had anything to with scanners, what would be the
harm in a 5k post of a few message-id's to save face? Unfortunately,
the most you could come up with in 14000+ posts to the newsgroup are
less then a dozen..oh well, thanks for a good laugh anyway..and the
reply!

Anyone remember what David Ransom's Astro BBS tel. no. is? He might have
some related scanning stuff on there. He has a site on the Internet
(www.dransom.com) where you can get satellite tracking software and such,
but its got not near the amount of software available as his BBS does.
It'll be long distance, though -- assuming someone comes up with the number.
(Dave developed programs like STSOrbit, STSOrbit Plus, JPLClock, AstroClock;
and STSOrbit Plus has been used by official tracking stations and some
astronauts, and even aboard the MIR space statiion to track the locations of
satellites.

2574. PRO 2004 keypad problem; U help?

Newsgroup: rec.radio.scanner
Date: 1998-10-28 00:00:00 UTC
From: RON W KELLY <RKELLY5327@prodigy.net>
Message-ID: <718bq4$8d4$1@newssvr04-int.news.prodigy.com>
Source record: 140107

I have 2 columns on my 2004 keypad that won't function; the 1 column and the 2 column. All other keys in all columns work except for everything under the 1 and the 2. There is continuity between the solder pads on the back of the keypad and the 502 connector. Any suggestions will delight me.

Thanks to any and all who help. Would you mind sending answers email to: RKelly5327@prodigy.net

People in this NG have been commenting on receiving import scanners with cell reception since it became illegal to manufacture such receivers here in the US.
Why the sudden"Code of secrecy" ? Why is everyone jumping on this guy?

I also thought it was a bit strange that the fellow who told the original poster to "keep your mouth shut" repeated the original post in his reply!

Would this be legal since the State has absolutely zero authority to regulate the transmission of light (since it specifically mentions laser)??

Depends on what are calling "The phone system"...

I looked at Dejanews and could figure out where cellular phone concerns
got into this thread, so I can only assume that you are concerned that
if the "phone system" went down in something like a natural disaster,
that cell phones won't work.

Rest assured (sort of) that if there was an earthquake or something and
every landline phone in your town went dead, your cellphone may very
well still able to call anybody that has a working phone.

Cell sites are NOT connected directly to the public switch telephone
network. They are connected to mobile switching facilities through
dedicated circuits that may be on private microwave, telephone company
circuits (though not through telco local switches), and I have even seen
one on satellite.

Even if the PSTN was in a local area was down (like a telco switch
crashed) cellphone-to-cellphone calls could still go through, even if
the phones are on different cells.

Hi,

A few times a month I drive the 91, 60 or 10 freeways of California to and from Los Angeles out to Riverside County.
To help keep me alert on th elong drive I'be bought a new Bearcat BCX60 (I think that's the model) scanner with 10 bands and 30 channels.
Could anyone tell me some good local (or statewide) police frequencies for LA, Riverside, Perris, Hemet, Ontario, Moreno Valley andother areas on the route of my drive?
So far I am hearing lots of Spanish transmissions and other tow truck transmissions, but few police transmissions, much to my frustration.
Thanks in advance for any help!

This wasn't a very popular model...in fact it is hard to find anything about this model. Due to the limited frequency range and the very low amount of channels, taking the time to devise mods for this unit wasn't quite worth it. It is a good scanner to keep on the local PD or EMS.

Source record: 140136

Hello

First let me say Im already working on a new Internet page that will
contain the most detailed info for all of those interested in the airband
listening.
It's really a very interesting hobby for aviation and scanner enthusiasts.
It will be available soonly on 'http://fly.to/airnav'.

Now about the log.

Check how the airspace looked like at:
http://www.geocities.com/SiliconValley/Lakes/9420/shotex14.gif

The completely renewed aircraft database of AirNav helps a lot monitoring
all those new Selcals. It makes the use of the program much more
interesting.
Many new registrations and many weather data too.

Hope you find this post interesting.

Best regards, Andre Brandao

But what is the call routed through to do that? the land line network. You
would not be calling in Simplex mode, and you would not be using a
repeater that was not connected to the phone system. The phone system is
still needed.

I didn't have to pay for mine either. Just walked in and asked for one.
The ManagerDroid gave me one with no hassle.

Aren't they SUPPOSED to be free?

I am working on a web page with Southern California frequencies. So far I only have a few basics (ex: LACoFD, LAFD, LAPD, CHP) but hope to get more online soon. If you are looking for any particular freq or unit ID, please drop me a line and I will be glad to pass the info along. Happy Scanning!!!!!!

2610. LAPD Ch Allocations

Newsgroup: rec.radio.scanner
Date: 1998-10-28 00:00:00 UTC
From: redog31@aol.com
Message-ID: <19981028030120.15815.00000502@ng03.aol.com>
Source record: 140146

I am putting together a list of LAPD frequencies that have been allocated to the departments Astro Saber Radios. These radios cover the 450-512MHz wide band. They have the capacity to hold 254 programmed frequenncies. Currently they contain 150 channels for patrol officers, 180 channels for investigators, and 191 channels for the command staff. My list of 191 channels is missing the following frequencies and channel designators:

41
42
43
44
45
46
47
48
49
50
134
135
178
179
180

Please email any of the missing channels or any new channels (191-254). Also, I welcome comments, questions, suggestions, and information on the topic of the LAPD's Astro Saber Radios. I will also be putting together a list of frequencies that the LAPD uses on its VHF system. Feel free to send your replies on that subject as well. The final list will be published on my web site.

2616. More experiences with AR-8200

Newsgroup: rec.radio.scanner
Date: 1998-10-28 00:00:00 UTC
From: "Aad@his.best" <AvStrien@usa.net>
Message-ID: <716t9o$k57$1@newnews.nl.uu.net>
Source record: 140152
Cross-posted to: rec.radio.scanner,alt.radio.scanner,nl.radio.scanners

Hi you all,

I found a nasty bug in my AR8200. I am not sure wether it applies to any configuration, but I have the following situation:

1) I switched the Welcome Message to 'User', and programmed a 4-line message listing my name and telephone number, followed by (Ent).

2) I switched the unit off through the (Pwr) key. Through these 2 actions the data should be correctly stored in the AR-8200.

3) I switched the unit on again (Pwr) and it welcomed me through my own message as entered in 1) above.

4) Going to the Config menu using (F) (7)Conf, then cursor down (via the rocker) until the cursor blinks on WRITE PROTECT, then use the cursor left (again via the rocker key) to turn Global Write Protect on.

5) A few more cursor down entries should take me to the user-written Welcome Message as set in 1), however it takes me to a screen filled with garbage as well as one of my Search Bank Labels. Pressing (Ent) causes the processor to get back into 2VFO mode, the Welcome Message to be removed, the Global Write Protect to be switched off all without notification.

Other major inconveniences only to be found from the manual, but not in the praise campaign about the new concept:

1) No self-respecting scanner brand would inhibit the squelch to operate as soon as you hit any single key. But when you press a key on AR-8200 while it is receiving a transmission, and the transmission ends, squelch will not close ...

From responses in this mailing list / newsgroup I get responses like 'This is documented, hence works as designed'. OK, but why design it in such a crummy way?

2) The thumb wheel does not give the tactical feedback as was found on any other tuning knob including AR-8000. When pressed softly the wheel gives tactical feedback but your fingers will slip; when pressing more firmly, tactical feedback seems to be suppressed some way.

3) When scrolling through memory while you have empty memory banks, the system may freeze for several minutes. Responses in this mailing list / newsgroup tell this is by design as well, but AOR themselves have been able to deliver better quality with their veteran AR3000A. Also, any Uniden/Bearcat, Realistic, Yupiteru or Icom has instantaneous response. By

the way, the manual says the machine may seem to freeze for a few seconds, but definitely not for several minutes or even until batteries run flat or are physically removed.

4) Bandscope disables the squelch. Though this is by design, other brands are able to keep listening at least to the center frequency while the bandscope scans on its own. Look at Yupiteru's MVT-9000, iCOM's IC-R10.

5) The band scope channel distance does not automatically correspond to the current step size. You have to experiment with the horizon width to obtain a channel distance which more or less corresponds to the current step size. See how nice the MVT-9000 and IC-R10 do this for you.

6) Intermodulation and/or image rejection is just horrible, even worse than the tiny IC-R2 (though, I must admit, that one has no circuitry for NAM, SAM, SFM, LSB, USB, CW or any coverabe above 12.995 Mhz.) I live in The Netherlands close to the Amsterdam area, and one of the frequencies operated by Amsterdam Police gets some carrier (no, it's not a birdie) which is definitely not transmitted on that frequency in the 4M band. Also, professional 70cm band (around 469 MHz) is tortured with intermodulation products easily suppressed by IC-R10, MVT-7100, MVT-9000, UBC-220XLT and IC-R2.

7) Let AOR look once to an MVT-9000 in the dark, with the screen backlight turned on. That's what it should look like.

8) The transparent pouch with felcro to pack your unit in looks nice, but did anyone ever attempt to remove the pouch while the belt clip was attached? The pouch already sticks to the scanner anyway, and the belt clip firmly presses the case even tighter to the case. No way to remove the case (e.g. to replace batteries) without first removing the belt clip using a Phillips screw driver. Take a look at iCOM (cotton covered vinyl allowing easy slide) or Yupiteru (with zippers to access the battery compartment without unwrapping the entire scanner).

9) If you happen to put your scanner face-down on any sandy surface, scratches will occur on the display screen. This also applies to Yupiteru, but not to Uniden or iCOM. Maybe a reminder for any new AOR? Hope AOR (UK, JA) reads these mails too, since I'd appreciate to once have a scanner with the power features of an AOR, the design quality of an iCOM and the user friendliness of a Yupiteru. May be some time?

Best regards, Aad

Sigh... why do people always react without thinking about these things?
Think it through: have you ever had to set the calendar date on your
scanner?

No, there won't be any problem with your scanner on 1/1/2000. Unless you
break it for some other reason... drunkenness... panic... partying... :-)

Jerr is right. However, check out http://www.learn-to-fly.com and look at Sporty's Flight Shop. They have a JD-100(?) portable air band scanner that covers 108-137 MHz AM and 225-400 MHz AM for around $150. Let me know how this works out if you decide to go that route. I'm interested too.

2625. AR8200 Software bugs

Newsgroup: rec.radio.scanner
Date: 1998-10-28 00:00:00 UTC
From: nospam.neilbell@value.net
Message-ID: <3638457f.3258819@news.value.net>
Source record: 140161

The AR8200 is a VERY nice scanner, but the software had some serious bugs. Users should be VERY cautious in several areas:

1, If you have programmed any CTCSS tones in you channels and use the software to make any further edits, when you write the data back to the radio, All of the tone codes will be lost and you have to then manually re-program all of them.

2. If you have any PASS tags on channels and edit those banks with the software, they are all erased.

3. If you have a Select scan established and use their supplied software to edit banks, those select tags will be erased.

4. The software says that you may select different link-groups when using computer controlled scanning, but in fact, you cannot, The program ignores that selection

5. If you have a channel label of say "PD Tac" and try to use the program to later edit that label, it won't let you extend the label to the entire 12 characters available. You can get around this design "feature" bvy going to the end of the label, holding down the delete key momentarily and then typing a new label.

Ther are, unfortunately, other problems and I hope that AOR or some other software company will take steps to correct the problems.

Just for info, these bugs apply to the shipped initial release as well as the latest version 1.9.1

You can hook up a indoor TV antenna, these will help. Ones with the Optima circutry are the best.

>too.

JD-100: 1997 vintage. Limited 20 channel scanner which
covers civil and military air bands only. Good audio.
Large display shows frequency only out to 2 digits. Slow
scanning and odd keystroke sequences. No key press
confirmation beep. Cannot lock out channels from memory
scan. Powered by AA batteries. Battery saver circuit. See
"Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in
Monitoring Times, November 1997.

One thing is clear. The market is so thin that no one can afford to
really, really debug these apps. Probably, as you say, the only solid
one is the DOS app.

But it seems ignoble to be running one. I guess you can run DOS in a
window and put it in the background but it seems inelegant.

It's frustrating. Listening Post is solid for me but crashes for you.
ScanStar is great for others, and great for me when I install it, but it
won't load on the second day. Can't find a DLL that's right there under
its nose.

I've tried RadioMax, and it isn't too bad.

The trouble with all this is hauling freq lists around when you
experiment. The Probe idea of using .dbf files is a good one.

Listening Post is supposed to have some great state-of-the-art data
handling capabilities using ODBC, but I haven't figured them out yet.

When PhotoShop comes out with a bug, ten thousand graphics artists
descend of Adobe, but when a scanner user had trouble with his software
the vender will give some perfunctory advice, but then the user will cry
along.

> For my other scanners, I prefer RadioMax www.futurescanning.com

Try The Radio Shack Pro 60. It covers 108 t0 224.995, 225 to 399.9875, and 400 to 512. That should cover the Aircraft band. I bought mine for air show but in Edmonton Alberta area we lost all our air shows. It is also very good in intermod as it has triple conversion. It does AM, FM, and WFM selectable.

> It's frustrating. Listening Post is solid for me but crashes for you.

The fundamental problem with many of these programs and hardware is that they deal in bitstreams other than 8-bit bytes and have to do so by toggling the DSR (or some other) line instead of just being a stream of data. The software has to watch that happen and be aware of the transitions and timing of that stream to "understand" it. That means that the program must have absolute priority over everything else to watch that bitstream on that device. (It also means UARTs like the 16550 series aren't helpful at all because they're buffering up the bytes, and your data is coming in on a control line.)

You can hack that in Win3.1. You have no problem in DOS. In NT, you're in trouble, but it could probably be done with a special driver. Dunno enough about Win95/98 to say how or if it can be done reliably.

>Looking for Harford County,MD firefighter freqs.
>Any help will be apreciate it!!

Channel 1 460.600
Channel 2 460.575
Channel 3 460.625

Channel 1 is main dispatch. Channel 2 and 3 are fireground or overload freqs. All 3 have repeaters but also are used simplex for fireground.

You also might enjoy:

Med 4 463.075
Med 8 463.175

These are the ambos talking with the hospitals for consultation while they are on their way in. You will only hear the hospital side. Base stations only.

Rescue 1 463.95

Rarely active but interesting when it is.

Board of Education on 463.925 is good for early decisions on school closings for snow. If you have kids you will find out first. Whenever there is questionable weather they send out scouts all over the county who report in like 5AM. During bad weather they are the best local source for road conditions, especially very early in the day when they need to make decisions about closings.

This story brought a tear to my eye..the days of trying all the
different programs for my scanner only to find that they all sucked!
Even your baby up there crashed on me after random amounts of time
sometimes 10 minutes, sometimes 5 hours..anyway I took the advice of
most everyone on the newsgroup and bought the Probe software with out
even seeing a demo! Wow, I am glad I did! What an awesome program
obviously written by a real programmer with much knowledge! Compatible
with normal .dbf files used by most if not all spreadsheets and 100+
cps operation on a lowly 386 or a screaming hot P2. The most amazing
thing about it is that it is a dos program! If you had 10 serial
ports, under Win95/98 you could run 10 instances of it and never even
know it was going back there..it uses so little resources!! It is like
it's not even there! Most outstanding!! The only drawback is that it
is only for OS456/535 equipped scanners.

For my other scanners, I prefer RadioMax www.futurescanning.com
but...hey opinions are a dime a dozen on the internet!

>Thanks

Go here!:

http://www.amsat.org/amsat/sarex/shutfreq.html

Also:

On HF, WA3NAN - the Goddard amateur radio club
re-transmits the missions on: 3.860 LSB (all freqs. in single side band)
7.185 LSB
14.285 USB
14.295 USB
21.390 USB
21.395 USB
28.650 USB

These are dependant on propagation! In South Eastern N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

Happy listening!

Tom

I agree. It's not like you expected them to pay for postage and mail you yearly catalogs. You just wanted to grab one on your way out. Alot of companies will even go the extra mile and add you to the mailing list. Beings you won't get answers from Rat Shack employees, you should at least be allowed to get them from a catalog. The next time you make a large purchase at Rat Shack, demand to have a free catalog thrown in or take your money to another store. This is just another reason why I have faith in Rat Shack.

Those guys are on the Fort Lauderdale trunked system (2E13)

The freq's are:

c v866.2125,260,ffff
v866.2375,261,ffff
dv866.2625,262,ffff
dv866.4125,268,ffff
v866.6625,272,ffff
v866.9125,27c,ffff
v867.1875,287,ffff
v867.2125,288,ffff
v867.2625,28a,ffff
v867.6125,298,ffff
v867.6375,299,ffff
v867.8375,2a1,ffff
dv867.8625,2a2,ffff
v867.8875,2a3,ffff
v868.3125,2b4,ffff
v868.3375,2b5,ffff
v868.5375,2bd,ffff
v868.5625,2be,ffff
v868.5875,2bf,ffff
v868.7875,2c7,ffff

If you have a trunktracker visit my webpage (url below) for some
talkgroups, if not you will have to settle for a mix of Ft Laud,
Pompano and a few others...

I was looking at a trunk scanner as well but I may be confusing it with CTTS (?). The Ontario Provincial Police use either trunking or CTTS. What would be a good scanner for the OPP who use several channels but each channel will remain open for a certain amount of time while the conversation continues on another channel.

Any ideas?

Jason

>Judd and Fireman Charles R. Palacios (both of LAFD, Station 92, located at
>10556 Pico Boulevard, Los Angeles, CA 90064) were having my amateur radio
>antennas destroyed on Thursday, September 17, 1998.

Khalil (the person writing the above) seems to think that every action taken by a person employed by the LAFD is the result of official LAFD policy.

In reality, there are many different possibilities for what happened:

- the action was in line with official LAFD policy

- the action contravened LAFD policy, but the officers were unaware of the policy

- the action contravened policy and the officers *were* aware of the policy

- the LAFD in fact has no policy on the issue

In addition, it depends on whether the officers were on duty or not at the time the antenna was destroyed.

From the facts presented, we can't tell which is the real situation. I could be that the two firemen, acting on their own while off-duty, destroyed private property. Although this is illegal, it is *not* the same as the LAFD having an official policy to destroy amateur radio, which seems to be what Khalil concludes. And the appropriate remedies are very different for some of the possible cases.

You are a schmuck, Mackey. I am simply testing new anti-SPAM software for the good of society. If you had half a brain, you would look at my headers and my organization, and you would clearly see from which domain I am posting. And "SkizzikS" is indeed a valid e-mail address "assigned to" (chosen by) me at that domain. Figure it out. I am posting with a valid email address, if you take the time to do some deductive reasoning.

Also, how can my comments about being tired of your crap mean "NOTHING"? No matter what ID I use, I'm still tired of your crap.

No, you both got it wrong, All traffic from any individual site is
routed back to the centeral switch where the interconnections are done.
If the centeral switch goes down, the whole system dies. There isn't
any way for mobiles to communicate without the centeral switch. Bruce

>The county in which my fire department is in is investigating going to an
>800mhz radio system.

The specifications, engineering, design and maintenance of the system will have a far greater bearing on your system than the specific band in which it resides.

Your first task is to have vendors provide a sizeable list of fire agencies that are using similar systems. Ideally, that list will include several departments that approximate your fleet, deployment, call volume, geography and planned interactivity with allied agencies.

You need to take the salesperson's rhetoric with a grain of salt. Take their literature and read it intently. Tell them to put any bold statements in writing and sign their name to it. Still, you should only believe so much of their sales pitch.

Be sure to establish contact and visit those agencies with similar systems. If at all possible, visit them personally and talk to Admin, Field Command and Line Personnel. Please don't forget to visit with the Radio Technicians (insist on it!).

Ask the Technicians:

- If you were to do it all over again...?

- Do you know any other agencies using this system? (specifically those that are not on the vendor provided list).

You get the picture. <grin>

Play Hardball. If you roll over, you'll get the system you deserve - a true turkey! This will be the case regardless of what band your new system occupies. Oh, and be sure to get in contact with your local APCO Chapter before you make your fist move. Their website is:

Source record: 139998

I heard from a fairly seasoned ham/monitor, that you if you live in an area with a GE/Ericsson trunked radio system, another way to listen, is to buy one of the radios themselves, he mentioned a Maxon, but, you cannot turn it on while in the trunked radio area, because supposedly the computer controller will send out some type of "kill" signal which will render the radio useless. He said that if you can disable the transmit feature of the radio, you can use it to just recieve. I would assume this would be a fairly expensive endeavor compared to just buying a G/WIZ chip. But if you were ambitious enough, you could do it. Has anyone tried it? Email me at the address below.

Fairly new to scanning, here is my question, I thank you in advance
for the help.

If a scanner can pick up cell phones and one has a hamcomm type
interface and a tap on the discriminator...

Can one use software such as Jfax to view faxes sent via cell?
What about other modem connections via cell.

Again, Hypothetically.

Thanks.

You're right that they can't regulate light (unless it's causing the
wrong kind of pictures to be projected on the screen :-), but they CAN
regulate what goes on in automobiles on their roads.

There are technically (3) three versions of the OS535 board.
The main difference is the CPU on the board. If I recall things
correctly, the chip uses Intel 8051 programming protocol. I'm sure
that if one wanted to do some reverse engg. and run the chip through
its paces while logging the digital I/O of the chip, you could come up
with some code to reprogram another chip to take the place of the
blocked CPU in another board.
The three versions mainly differ by the programming of the
CPU. Here is the basic rundown of the versions.

(1) Cell-blocked, code enabled. This board came blocked in the
cellular bands...but, if you just happened to be a cellular technician
or approved by the FCC, then you could receive the "code" that would
enable the CPU to listen to the commands sent from the computer when
you were trying to tune in on some cell freqs. This code was entered
once. If you used the same software again, you didn't have to enter it
over...if you switched to a different controlling software...you still
didn't have to reenter it. It changed the internal programming in the
CPU of the OS535 board. This version (#1) used to be sold but the FCC
had Opto change to version #2 believing that the code might leak out.

(2) Cell-blocked, not code enabled. This board is blocked in the cell
band. You can't enable the CPU with the code. Now if you ran the PLL
and the BPF selector through a PIC chip and the PIC chip was addressed

similar to the OS535, then you could get around it...but you would have to end up writing your own software or use some software besides Probe with another program to switch the PIC into "cell band mode". Probe doesn't use addressing, but you could also use a mechanical switch also. Version #2 is the board that is currently sold in the US.

(3) Cell enabled. This version is for cell techs or FCC approved. No code or 'tweaking' is needed. It does the whole range right out of the box.

Both answers are only half true. Cell phones enter the public switched network at specific gateways, for obvious reasons these tend to be relatively robust. It isn't a matter of a single twisted pair.

One of the suprises of the San Francisco Earthquake about 10 years was just how robust the Cell phone network is. Phones often can reach adjacent cells if the one they are in happens to be dow, so even losing half of the cells on the network, still leaving the cell network almost fully functional, although with reduced capacity. This is far better than the landline based system did. The CO's remained up, but the connections to their subscribers were largely lost.

. This fact now plays an important part in emergency planning. The cell network is generally more robust than the landline network.

If you smell crap, it must be your own.

CELL SITES ARE NOT connected directly to the public swicthed telephone
network. REPEAT - THEY ARE NOT.

Cell sites connect directly to one or more mobile switching offices that
is operated by the cellular system operator, not the local telephone
company. These connections MAY go through telco facilties, but not
through the end office switches that provide dial tone to local loop
users like residential customers.

Even calls between cellphones on the same site must go through the
mobile switch. This is not just for billing, as some might believe, its
because the cell sites don't do the switching. They are really just
radios and multiplexors that under the control of the switch.

Microwave links are not necessarily more costly and are still used even
if local telco could provide service. It is called "reliability" -
microwave links are very reliable and can be quite cost effective.

Backhoes don't dig up microwave links.

> >Even if the PSTN was in a local area was down (like a telco switch

> And what Police or Fire Dept. cellphone numbers do you have handy?

That a different issue. I hope that YOUR local police and fire
department has a contigency plan that involves alternate routing of
communications in the event of a local telephone system failure. My
point is - if the local phone system craps out, most cells phone will
probably still be able to place calls.

Rail roads are good. I also monitor USFS, BLM, CDF, Oregon, Colorado, Utah and Nevada Forestry. Even marine frequencies pop up where you do not expect them. NPS frequencies and many more are active. The list goes on and on. But it may be quiet at times and that is good when you are looking at the scenery of wide open spaces.

In far northern Nevada, which I thought was a dead area, the fish and wildlife service was busy. I wish that I had a recorder on when two gals starting singing to their boss about wanting to get some hot dogs.

I'm going to disagree with Brian on one point - don't ask the technicians!!!!!
Typically technicians cannot offer a valid opinion about system operation. If they are not familiar with the technology involved (trunking for example) they will badmouth it no mattter what. If they are satisfied with the technical operation of their current system they will praise it. Get the opinions of the users - The fire grunts in the field! If it is good they will tell you so, if it is bad they will tell you (and exaggerate). If its a new system take any negative comments with a grain of salt - sometimes you have to get used to change (it appears to me that most firemen would be happier using the old fashioned cardboard megaphone than a radio - they just hate change).

Unless you have some super knowledgeable engineer type on staff - hire a consultant. A good consultant already knows what you need and won't take any smoke from a salesman.

>

I'd have to disagree with you there, Tree. Most firemen LOVE change if it makes their work easier and/or safer. Especially with communications equipment, upon which, like their other tools, their very lives can depend.

Back when LAFD used 33 MHz frequencies for dispatch AND fireground, the few HTs they had could be pretty useless. I've had firefighters tell me they'd be hanging out a window trying to radio to their engineer down below and couldn't be heard, and "I could have THROWN the radio and hit him, but couldn't talk to him." For them the 800 MHz has been, literally, a lifesaver. (And, fortunately, not TRUNKED, with all the failures waiting to happen.

This is same unit Grove is selling for $999.00 and is in perfect condition.
This professional Spectrum Display Monitor is designed for use as a
panoramic signal display for VHF scanners & communication receivers such as
Icom, AOR, Realistic, etc.
The SDM-42A displays all signals present in the receiver's IF on a large 5"
CRT so that the operator can monitor signal activity up to a full 10mhz
wide. The operator can then quickly tune to signals as they appear in the
spectrum display. This greatly facilitates locating and tuning of
intermittent signals as well as surveying a particular frequency band. This
unit has been used for hobby purposes and is like new. Asking $750.00

You can't hear directly the shuttle radio, but some amateur radio operators operate a repeater which it rebroadcasts the shuttle conversations on a ham frequency. I don't know offhand though if there are any in the area.

From the reviews people have posted, this is not the answer! The best
thing to do is scout the local pawnshops for a PRO-43 or PRO-60! There
are many more models that cover it also, so the chances are very good
that one could be found there! Good luck!

Breaking news from Atlanta GA
One dead from car that was hit when plane crashed 20 minutes ago during rush
hour traffic.

From: Victor Healey [fourphun@xx]
Sent: Wednesday, October 28, 1998 7:19 PM
To: 4phun-scanning
Subject: [4phun-Scanning] More on plane crash 2 pictures attached

A single engine blue and white Piper Saratogawent down about 20 before 7PM
EST.
Flying north it turned and landed in south bound side clipping a mini van
and other vehicles.
The crash upended the van and the plane exploded.
One of the drivers on the expressway was killed outright.

Here is another picture and it shows the wreckage which slid under a bridge
at Roberts Drive over GA 400 which is the highway
that runs due north out of Atlanta GA.

From: Victor Healey [fourphun@xx]
Sent: Wednesday, October 28, 1998 7:23 PM
To: 4phun-scanning
Subject: [4phun-Scanning] Here is picture of whats left fo the plane at
7:15PM

Here is picture of what is

left of the plane at 7:15 PM

It is dark here and the picture here is the best found on the three choppers overhead.
It is a special low light camera now in service.

Many people are on all the stations with eye witness accounts of the plane with engine sputtering and the resulting explosion.

The pilot has been retransfered to Grady hosp[ital which is a premier trauma center and burn center here in the SE.
The pilot was from Bessemer AL.
Going to Gainsville GA.
The plane appears to be almost totally destroyed

Here is a bad video taken of the fire before the chopper arived on scene befroe fire equipment was on scene minutes after the crash and fireball.

Orientation of this picture is up is NORTH.

The pilot was a woman.

Subject: [4phun-Scanning] More on that plane crash

This crash is unique in that there were hundreds if not thousands of
witnesses.
This occured in heavy traffic associated with rush hour.

The nearest firestation was only two blocks away and they were on the scene
with two trucks
within minutes while the fireball was still there.

The plane was trailing a fifty foot stream of smoke as it came down.
one person thought it was a jet.

Many felt the heat from the explosion.

It is a mircle that more were not injured or killed.

There was a second plane flying closely to the plane that crashed>

May have been military transport out of Dobbins AFB, Smyrna GA.

Plane got entangled with a car and the two started rolling end over end
before the explosion.

I was not far from that scene about an hour earlier in my work.

It looks like the prop of the plane dug into the windshield of the car where
the fatality was.

Here is another current picture, plane is stuck to car which is vertical.

FAA and NTSB are now on the scene. they are based here in Atlanta.

Pilot avoided many apartments and cluster housing.

Woman pilot was very calm all the way down to impact talking to PDKB
tower.
C130 was the military plane.
I did not hear the air band traffic but a pilot said that the C130
reported an explosion adn directed emergency vehicles that responed trhough
a patch.

C130 was in mutual contract with Peachtree Dekalb Airport and plane in trouble.
cars on the ground saw the plane and got over to make a path for her to land in but the one who died didn't.
My wife says that another report is that the victim didn't see the plane comming at them.
Car hit from behind.

From: Victor Healey [fourphun@xx]
Sent: Wednesday, October 28, 1998 8:13 PM
To: 4phun-scanning
Subject: Wrap on plane story for now.

This is a wrap to my live report of the plane crash on GA400 in the last hour.
Both victims were women.
The fatality was in the van.

Bridge burned but still useable.

C130 was out of Dobbins and assisted in air communications after Piper declared emergency.
This confused some on the ground who saw two planes and one explosion.

Woman pilot is in satisfactory condition at Grady burn center.
Burned but not as serious as initial report to hospital while in route.

Pilot will probably live. She is going to be a hero.
She was in a desperate situation and remained calm saving many many lives.

Look for this in the national news and/or on CNN.
Police tried to open one lane SB but the plane reignited which killed that idea.

If any one wants more pictures I can post one or two taken from edited news footage which will be broadcast in two hours.
It is easy for me to capture live video using an ATI All In Wonder Video Card.

I can tell you what the Icom brochure says. "The SIGNAVI scan activates with programmed, auto memory write and full scans in FM mode. This scan bypasses or skips clear frequencies, within +/-100 kHz from a paused frequency, to the next busy frequency." This is supposed to help speed up scanning. In other words, it is looking for the next busy freq while you are listening to another one.

The only Live Audio I know of is:

1.California Highway Patrol Computer Aided Dispatch

2.Dallas Fire Department Scanner Feed

3.Dallas Fort Worth Air Traffic Control Tower Scanner Feed

4.Dallas Sheriff Department Scanner Feed

5.Dallas Police Department Scanner Feed

6.Los Angeles Police Department Scanner Feed

All of these can be heard through real audio (except for the two CAD feeds) and
are all linked on my scanner web page.

Mike Manahan (ReDoG31@aol.com)
http://www.manahan.net/scanner.html

7.New York Police Department Scanner Feed

8.Palm Beach Fire Department Computer Aided Dispatch

9.Plano Police Department Scanner Feed

The SIGNAVI feature on the Icom IC-R10 will scan for busy frequencies while you are programming or auto writing a frequency. That way, when you finish the function you are doing, it already has a signal for you to listen to. To use the SIGNAVI feature: go the VFO mode by pushing the V/M key, then push the FUNC and SIGNAVI keys at the same time. I never use this function on my radio, maybe because I don't use my R10 that much :-)

The channel allocations are fairly new, so you may not hear a lot of
activity yet. Some of the phones may use scrambled/encrypted or
digital technology, in which case your scanner will pick up nothing,
or nothing but noise. Still, it never hurts to try. That's
apparently what happens when you're listening and hear only one side
of the conversation, but when it changes cells you will hear a burst
from the other voice. That person may be using a digital cellular
phone.

The handset frequencies are 24.000 MHz higher. As always, you will
hear both sides of the conversation on the base frequency.

Panasonic telephone base units

Ch. Ch. Ch.
1 902.100 16 902.550 31 903.000 46 903.450
2 902.130 17 902.580 32 903.030 47 903.480
3 902.160 18 902.610 33 903.060 48 903.510

886.6625 931.6625 886.6875 931.6875 886.7125 931.7125
886.7375 931.7375 886.7625 931.7625 886.7875 931.7875
886.8125 931.8125 886.8375 931.8375 886.8625 931.8625
886.8875 931.8875 886.9125 931.9125 886.9375 931.9375
886.9625 931.9625 886.9875 931.9875

But most of the 900 MHz channels may be digital and/or encrypted, so
you couldn't hear them anyway.

I too listened to my bearcat scanner that saturday when the rains
came. I luckily had all of my frequencies inputed beforehand. Here
is a list of several New Braunfels area freqs for those in the area
interested. I am still somewhat uncertain what all I have, but this
should give a good idea.

NBFD 154.130
NBPD 155.190 (Primary)
NBPD 155.310 (Secondary)
Comal Co.S.O. 155.595 (Primary)
Comal Co.S.O. 156.000 (secondary)
Seguin PD 155.715
Guad. Co S.O. 155.070
Car to Car 154.950
Canyon Lake FD 154.295

HAM:

New Braunfels 147.000
Canyon Lake 147.100
Wimberly 147.140

I also have the 10 codes if you want them.

Does anyone know what code 1, 2, 3, and 4 represent?

Bob

The SIGNAVI is a scanning function. It activates while you are paused (listening) at a frequency and the R-10 is set to do a full scan, a program scan or an automatic memory write scan in the FM mode. It scans for busy frequencies while you are listening to another. That's not quite what was explained below.

If you look in the stores, or scan the 900 band, you will see that most 900 MHz phones are actually just analog. The only thing they do is come in a lot clearer, for users and eavesdroppers.

Now, the ones using spread spectrum are a lost cause.

Ron,

If yours only goes up to 1600 then you've got a 50 MHh gap -- all the 7100's I've see go to 1650. Not that it's important. I have yet to find ANYTHING above 1000 MHz.

Great scanner, isn't it!

Source record: 140061

Hi, I own an IC-R2 since mid september, bought it in The Netherlands and it is a real good thing. You know, it's sensitivity outperforms a Yupiteru MVT-9000 (both IC-R2 and MVT-9000 operated with their stock rubber duck), but its image rejection and intermodulation are annoying. However, most of the transmissions I tend to listen to exploit CTCSS-encoding, and since IC-R2 has builtin CTCSS-decoding, my squelch suppresses all these intermodulation and images as long as they have different sub-audio frequencies.

Also, as opposed to the note below, it is much more than an IC-Q7 without TX button ... it has 400 memories in 8 banks, and starts receiving at 495 kHz. Using an appropriate longwire antenna it even doubles as a portable Short Wave Set, however only in AM and FM modes (i.e. CW and SSB are not available).

After programming the IC-R2 for one day, you have well exercised your left thumb which is required to press the tiny, heavy-going Function Key, but other negative points ... I don't know.

The IC-R2 has 3 modes:

Expert level - allows any setting to be changed
Regular level - allows basic programming
Channel Mode - only offers access to preprogrammed channels

Apart from this, there is also a key lock which can be programmed to disable some (or all except On/Off and Key Lock) keys.

The set has no digit keys, so programming the frequency is a matter of skipping (in 7 giant steps) through the entire frequency coverage, then, through an accellerated tuning knob, to the desired frequency (in large steps throuh Function + Tuning knob, or small steps using the tuning knob only). In general, with a little experience, you can get to any frequency in less than 10 seconds.

The IC-R2 can be controlled through IC-R7 RS232 interface (but I have seen no software yet), and with a simple cable you can clone one IC-R2 from another.

From the documentation available to date, I found there will be 2 very different versions, one being cell blocked with free choice of step and mode between 495 kHz and 1602 kHz, the other being unblocked but with a fixed 9 kHz step AM mode setting in the given frequency range (i.e. unblocked ones will have no much use for Medium Wave frequencies in USA/Canada.

Finally a comparison with it's most recent predecessor at iCOM: Scan speed has much improved over IC-R10, but you'll miss the text labels, another 400

channels, auto-store, voice-squelch, band scope and SIGNAVI (look-ahead for the first-next active frequency within 100 kHz from the current receive frequency). Also, only predefined step sizes are available, not the weirdo ones you could set in the IC-R10).

However, it has an automatic power-off when left unattended, the mentioned CTCSS-decode squelch a CTCSS-search aid to determine which CTCSS-encoding is in use at the transmit-side), a nice auto-squelch (which compares current center RF level to overall RF noise level, doing a good job when selecting proper receive mode), various priority modes.

Hope this helps you - good luck !

Aad

2769. Antenna from TV

Newsgroup: rec.radio.scanner
Date: 1998-10-29 00:00:00 UTC
From: jmasterson <jmasterson@ameritech.net>
Message-ID: <36388492.9D4E3B07@ameritech.net>
Source record: 140067

I have a 14' (boom) tv antenna on the roof of my 2 story house
which is not used now because of cable tv. It's 20 years old. For my Pro
2005 scanner, I have been using a discone in the attic. It works good.
However, I would like to use the TV antenna (w/rotor) on the roof to
capture distent (directional) signals. For example, the control tower at
Detroit Metro (about 45 miles away).
After connecting the TV antenna to the scanner, it didn't work very
well. The discone still had better reception even being smaller & lower.
I did not use a splitter at the scanner? To check, I plugged the tv
antenna into a TV and got a great picture.
In theory, seems like a good idea. Tower freqs at 120 MHZ are in
the middle of the VHF TV range. I have read that polarization doesn't
seem to be a concern?
Any ideas what to do???

Jim

2770. Re: Antenna from TV

Newsgroup: rec.radio.scanner
Date: 1998-10-29 00:00:00 UTC
From: Bill Crocker <bcrocker@home.com>
Message-ID: <UT%Z1.961$Ff6.9022275@news.rdc1.mi.home.com>
Source record: 140068

Jim:

Is the antenna wire 300 ohm twin line, (flat, about 3/8" wide), or 75 ohm RG6 coax, (round, about 1/4" dia.)? Your scanner's impedance is 50 ohms. The 75 ohm coax should be ok, because your receiving, not transmitting. The 300 ohm twin line would need a transformer, which converts the 300 ohm impedance to 75 ohm. You can buy these for a couple of bucks at Radio Shack. The other consideration is signal loss in the cable. What is the total length of your cable? My experience has been that the signal strength you gain from height, is lost, proportionately, by the length of cable.

Grove sells a scanner beam, which is a modified T.V. antenna, turned up vertical. It's not expensive, and it's always had great reviews! Michigan Radio, in Warren, MI., sells a special purpose, aircraft band, discone antenna, with elements tuned to that frequency spectrum. While not being directional, it should still work better than others. I can't remember the price, it was not cheap.

2774. Re: WHAT AM I HEARING?

Newsgroup: rec.radio.scanner
Date: 1998-10-29 00:00:00 UTC
From: starthnker@aol.com
Message-ID: <19981029112451.28255.00001368@ng91.aol.com>
Source record: 140072

>>Hi,what am i hearing on47mhz? It sounds like a 2 sided phone conversation.

>>Cordless phone base units are at 43 and 46 MHz.

I get 2 sided phone conversations all over 47mhz. Sporatically on lower frequencies, and one-sided (handset only) on higher. I also get baby monitors, my son's Star Wars walkie talkies, and the PA from a hospital that is about a half mile away, and if I hit the specific frequency at the right time, my neighbor's remote door-bell speaker. My understanding is that the upper 40's were a toys and gadgets free-for-all area which is why I can pick up so many things on my continuous scan.

I hardly get anything at 46mhz. Is my unit off or is the fellow saying 43 and 46 is for phones off? Never had anything below 44 for that matter, 47 seems to be the busiest. My scanner runs 24 hrs a day so I pretty much know where all the traffic is (after two years in this neighborhood) even if I'm not an expert on how it works.

Could anyone who replies also send a copy to me via e-mail?

This came off fire-L, i don't recall seeing a copy of it here....

You wanted an update on my antennas ? Well, here it comes..

Did your ever see the movie "Fahrenheit 451", where the fire department went around burning books instead of putting out fires? This movie was based sometime in the future and starred the German actor "Oscar Werner".

On October 28, 1998 at 10:20 am (Los Angeles, California time), it was revealed in a court of law (Division 96, Los Angeles Municipal Court , 3000 South Robertson Boulevard, Los Angeles, CA 90034, Presided by Judge Elliot) that the Los Angeles City Fire Department (LAFD) can directly violate the "Process of Law". Sworn testimony provided by Emil Katz, Roxbury Square Homeowner's Association, stated that he was present while Capt. Randall Judd and Fireman Charles R. Palacios (both of LAFD, Station 92, located at 10556 Pico Boulevard, Los Angeles, CA 90064) were having my amateur radio antennas destroyed on Thursday, September 17, 1998.

The LAFD directly lied to me when Capt. Judd stated emphatically in my telephone conversation with him on October 17, 1998 that "LAFD would never perform an act of this sort, We do not destroy private property. We do not destroy antennas !! " Capt. Judd went on to say that the LAFD is a strictly law-abiding entity that would not perform any type of a vigilante action. Yet, this was done in plain view of Emil Katz. I never received any type of notification that gave me any advance notice of what was to come.

In addition to above statements, Chief Wilfred W. Bisson, KF6XX, in a telephone conversation on Monday, September 14, 1998 at 2105 hours PDT,told me " I will talk to Capt. Judd and Fireman Palacios to resolve the ordinance issue; Khalil, don't worry about it." Three days later, without any warnings, my antennas were destroyed.

Inspector Garza (LAFD Legal Department) called me on the telephone on October 2, 1998 to notify me of a meeting that was to be held at the Los Angeles City Attorney's Office in the week of October 9, 1998 to discuss ways to resolve the "amateur radio antennas on the roof" issue.One problem.. No more antennas..

I wrote a letter (certified/return receipt) to Capt. Michael T. Little (LAFD Legal Liaison) , KD6LAF , on October 14, 1998 requesting a letter from the LAFD that will state the facts of LAFD's position concerning what has happened to my antennas. I stated that I need the letter for court. The return receipt was returned signed by Capt. Little. However, I did not receive any response from him about this. Now I know why.

The issue discussed above pertains to Los Angeles Municipal Code (LAMC) 57.12.02 (enacted in 1996, 5 years after my amateur radio antennas were installed on the roof) which in effect prohibits amateur radio operatora from exercising their Federal Privileges as granted by the FCC and the Communications Act of 1934.
This privileges is further bolstered by the Communications Act of 1996, PRB-1, and California Civil Code 1376

The LAFD has decided that it is above the law and that the public interest can be best served by taking an anti-amateur radio position. The ordinance make it virtually impossible to install any types of roof-mounted antennas, specifically wire dipole/ V-dipole antennas which the LAFD considers as guy wires not as antennas.

It appears to me that something very sinister is happening around us. The LAFD states publicly that it supports amateur radio operators thru its ACS (Auxiliary Communications Service). a RACES program cordinated by Chief Bisson, KF6XX, and Capt. Kevin R. Nida, WD6AIS. Privately, the LAFD is working for the elimination of all amateur radio operators.
You may ask what interest groups, specifically, wish that amateur radio operators will go away ? Well, we have the cable companies, Microsoft (with its low-orbiting satellites), and various land-mobile companies who wish to grab more radio spectrum.
It seems that the LAFD appears to be operating in a direct relationship with the above interest groups (Capt. Nida is involved in a company that specializes in commercial radios).

This is not a case of government serving its citizens, it is rather a case of government serving special interests.

In summary, the amateur radio operator does not have a clear position statement from the fire bureaucracy that is supposed to serve the community. We are dealing with a bureaucracy that is making its own laws. We , as amateur radio operators, must intensify the fight for our legal rights and preservation of our federal privileges. These lawful privileges shall not be eroded by an "appointed" "non-thinking" bureaucracy.

If anyone, amateur or non-amateur, feels the need to express an opinion, please send it to: Brian Humphrey, LAFD Public Service Officer. His e-mail is: brian-humphrey@prodigy.net

I am sure that we would all be interested in hearing the Public Service Officer's response to what happened to me as a result of LAFD's unlawful actions.

Sincerely,
Khalil Ladjevardi, K6FCC
Volunteer

I'm running Listening Post into Win 98 and an OS-435/Pro 2006. When I'm scanning in the background the Norton Utility CPU Usage meter runs from 3% to 6%. I know CPU usage isn't always the only measure of how much your machine is being loaded down, but it will run PhotoShop in the foreground.

OTOH with ScanCat, even typing something into a Windows drop down was like molasses. Scan Star seems to run well in the background, but I have another problem with that.

Different Subjece --- In another post someone was wondering about going to computer run scanning. One of the key advantages here is that you can do a frequency range search and capture the frequencies you find, then drag the over into the frequency search mode after you've found everything in that range that your receiver can hear. Some users will scan a range for weeks before building the frequency file.

There my be stand-alone receivers which can capture found frequencies and save them, but I don't know one.

The first thing to do is replace the coax cable! Get some new RG/6.
Next, when you see how excellent it works now, you can think about
mounting it in the vertical position. You will probably not even
bother, but if you do try and make a nonmetallic mast for it.

In theory it is a good idea. And in reality its not a bad idea. First, TV antennas are designed for 300ohms and the scanner designed for 50ohms. I'm not sure how you're connecting the antenna to the scanner, but be sure you have a 300/50 ohm transformer inline. In reality, you can at Radio Sh*t buy a 300/75ohm matching transformer (but not 300/50) which will work just fine.

Next, about being polarized, if you can, just mount your TV Beam so the elements are veritical instead of horizonal, this might help (you're right polarization isn't a big think, but trying to receive VHF Air 45 miles away every bit will help)

Also, make sure the beam is pointed towards the station you want to hear, remember TV antennas aren't omni directional like discones are.

Receiving tower from 45 miles away is going to be hard to do, that's pushing it, but with a good antenna and scanner not impossible (the PRO2005 is a good radio!) I can pick up towers/vors/and other ground based AIR freqs over 30 miles with a pro2006 and discone just strong enought to break the squelch.

Hope all this helps
George

I seriously doubt they can say that you can't have a device that
transmits IR. If they did, they'd have to outlaw every light on your
car. And, if I happen to have an IR Deer Warning device mounted to my
car that just happens to interfere, well, too bad.

I just picked up my AOR-8200 up today. After the first 10 minutes of playing with it, I knew it was a Mercedes, not a VW. It is rather logically laid out and the feel and audio scream quality. I know there are those on this newsgroup that have been very critical of this unit. I am aware of problems existing in units of European origin. All I can say is it was worth it for me and I am not easily pleased.

>with your handheld ham radio.
Here in Anaheim, Ca., some of the most amusing listening over the past
five years or so revolved around individuals doing this very thing.
Some were well intentioned idiots and some were hecklers intent on
pissing off the cops. In either case the authorities found little
amusment in their antics and brought down the maul with dead
seriousness (much to the amusement of us evesdroppers).
If you need the cops, go thru the proper channels, (the phone).

I would like to announce that I have designed a website and mailing list for Connecticut area scanner radio enthusiasts. This site will have the lastest info on the new Connecticut State Police Trunked radio systems. The list also has links that allow FCC database searches from FCC and Percon Corp. Websites.

http://www.bigfoot.com/~connscan - ConnScan/The Connecticut Area Scanner Radio monitoring enthusiasts webpage.

http://www.onelist.com/subscribe.cgi/connscan - To subscribe to the ConnScan Mailing list.

Hope to see you there!

Terry Wright

horizontal vs vertical polarisation makes a difference of 6db this is one S-Unit.

Only on HF-Bands it makes not MUCH difference because of reflections in the
ionosphere. But on UHF and VHF you receive directly.

>squelch,still nothing....

Have you tried powering the BC100XLT directly from 7.2 VDC
at the slide-on contacts? (Be careful of polarity.)

The BC100XLT and BC200XLT are similar except for
100 extra channels and 800 MHz front end.
From the FAQ:

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there
is no audio and the green backlight no longer functions, a
tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201
(2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC
to several stages of the BC200XLT. Its main purpose is to
switch off power hungry stages of the BC200XLT when the CPU
thinks the NiCd voltage has fallen below a threshhold.
That's an attempt to limit the current drain on weak NiCds
to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board,
adjacent to the black multi-pin connector which mates the
Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily,
by something in the scanner drawing too much current
through it. In one case, capacitor C36 shorted. It's a 220
uF 10v electrolytic, located on the component side of the
main board, connected from pin 8 of the audio IC (IC2
NJM386SL) to ground. Capacitor C55 shorted in another
BC200XLT. Gary Bean reports he substituted a 2SA1298 for
Q201 and it worked fine. In a pinch you bypass Q201 by
soldering a short piece of bare wire between the collector
and emitter, but you must first fix the component which
caused Q201 to fail.....

O lord here we go again. We just had a huge discussion on 800 MHz trunking and it got mixed reviews. In my mind the bottom line is this.

If it is well thought out and implemented without trying to do too much it will be excellent. If you rush into it and cut corners for cost reasons you will hate it.

2813. AR-8200 - more experiences

Newsgroup: rec.radio.scanner
Date: 1998-10-30 00:00:00 UTC
From: "Aad@his.best" <AvStrien@usa.net>
Message-ID: <71blst$f9q$1@newnews.nl.uu.net>
Source record: 139900
Cross-posted to: alt.radio.scanner,rec.radio.scanner,nl.radio.scanners

Here again are some questions on, and experiences with myAR-8200 (S/N 070823):

When my AR8200 has global write protect on (through the Config menu), the scanner no longer resumers withthe task it was doing before power-down. E.g. if I start a scan, then turn off power, the scanner should resume scanning, however, if the scanner was not scanning while Global Protect was turned on, it would not start scanning anymore.

Q: Am I doing things wrong or is this behaviour by design?

Also, if my last displayed memory channel were, say, A27, and after that, I turn global protect on, then look at just any other memory channel, this other memory channel is not remembered afer a power down / power up cycle. The scanner sticks to channel A27unconditionally.

Q: Again, am I doing things wrong or is this behaviour by design?

It seems to me that the squelch has a very steep characteristic, that is, I have to keep it extremely close to the noise level, otherwise no single transmission opens the squelch during scan or search, even if it has an S9-reading once the squelch opens (weaker transmissions won't open the squelch at all during search or scan). I ensured that both level squelch and voice squelch are off for each of the scans. Also, I have no CTCSS installed which might influence the squelch.

Q: How to get better sensitivity during scan?

How does the voice squelch work? If I open the squelch fully counter-clockwise, and set a Voice-squelch level of about 80 (the first one without an asterisk on my unit), then listen to clearly spoken S9-reading transmissions without any background noise, the squelch will definitely remain closed.

Q: How to get the voice squelch working like, say, IC-R10

where it has no choice of 255 level settings, but just works?

One final series of questions:

1) Does AOR read and/or respond to this news group?

2) Is there any chance to get a full refund of my AR8200 by AOR, or a letter of credit to receive one free of charge once all the trouble is solved (Of course I asked my dealer, but it took me some 4 weeks now to find more and more inconveniences every day, reading the manual again and again and again and again, so things do not look mint new anymore).

GreetZ, Aad (a happy AR3000A user, so AOR certainly has some credit with me!)

The "Y2K bug" is NOT a bunch of crap! It is manageable though.

It can be dealt with by using a little common sense. Most if not all scanners have no functions based on calendar time. No problem there. Microwave ovens have timers, but none of them (to my knowledge) have any functions that rely on date. No problem there. Now take cellular phones. The cellular towers and your phone are just radios that do not care about the date. The problem here is that the software that controls the switching is very dependent on time because of billing etc. If the software that runs the cellular system craps out because it can't deal with the date change then nobody can use their cellular phones. This is also true of your land line phone. Where would we be if all telecommunications failed on January 1, 2000 ? Even low tech things may be at risk. Let's say you have a machine shop that makes cylinder heads for an auto manufacturer. The software that runs your NC milling machine dies because of the date change. Do you have enough skilled machinists left on your payroll (after down sizing to be competitive) to produce your product? If everyone sticks their head in the sand it WILL be a crisis. It can be dealt with, but if you ignore it, the simple stuff will jump up and bite you in the ass.

Dick

I wasn't sure how various newsreaders would handle the link, so I put two
different ones into the post, the first one in plain text, and the second one
as a typical HTML "href" markup of the URL. Apparently that one worked as
intended...

Check for corrosion and clean all contacts. You may not actually be connected to all of the antenna.

> Tower freqs at 120 MHZ are in the middle of the VHF TV range.
Once you've dealt with polarization and downlead, there remains one significant problem. The "middle of the VHF TV range" is actually a hole. Channels 2-6 cover 54-88 MHz, chs 7-13 are 174-216 MHz, and UHF chs 14-69 are 470 - 806 MHz. The airport tower you're trying for, at 120 MHz, falls right in the middle of that VHF hole.
If you look at the TV beam antenna, you'll note three sets of elements. The longest set are for chs 2-6, the slightly shorter ones are for 7-13, and the separate very short set is UHF. You've got three antennae in one package, which work fairly well for the standard mobile radio bands, but coverage of the aero band is going to be significantly poorer.
When you're setting up this rig, run your tests against a distant NOAA weather station (162.xx) to see how it works. After that you can try for the aero band, but don't expect too much.

Is it just ham radio antennas that the LAFD are distroying or ALL (Including TV antennas) that are being removed by the LAFD?

Thought, if it is TV antennas as well, start writing all the TV stations within 50 miles saying that the LAFD doesn't want you to listen to their TV stations, I'm sure that will get you some press coverage by the TV stations..... When told "why don't you get cable" just tell them that the cable companys are just big fat monolpies of which you will not deal with.....

I couldn't agree more! Its actually been years since I"ve bought a new R/S scanner. R/S has in their days made some great scanners and I prouldy own the PRO-2006, PRO-60, PRO-26, PRO-2035. Cell phone monitoring doesn't really excite me (it sucks that its illegal thought!) but my big thing is Mil Air and to date there are not laws in the works to make that illegal. For R/S to do this on their own is grounds for a nation wide boycott of all R/S products!

> this year by buying from some other store, or via the net.

RS doesn't make scanners. They get them from Uniden or GRE. When RS looks at
products for their stores, they have lots of criteria. One concern is whether
they can sell enough of an item to make a profit. They have several thousand
stores. Each store must sell several of them a year to make a buck. For each
one in the store, they try to have one in the warehouse in Ft. Worth. If you
have 2,000 stores, times 2 radios a year you get 4,000 radios. Multiply that
by 2 for the warehouse supply and you get 8,000 radios a year. (2 scanner sales
a year is very low, but it is good for this purpose.)

So, RS decides what price range a scanner must be in so it will sell. They look
at the various manufacturers and what they have to offer. They see that the
scanners with 200-400 MHz are too expensive according to their research, so they
elect not to get them. It is a sound business decision. They are not going to
lose money simply to please what is a rather small consumer group (scanner buyers.)
I am within that group, and I wish they had wider covereage scanners, but I realize
that they can't please every consumer. They have to appeal to the most number of
customers, not those of us that want things that are more out of the ordinary.
Most scanner buyers want to listen to FD/PD/EMS. That is a fact. Most scanners
are purchased for that purpose. Very few customers buy scanners to listen to
200-400 MHz.

RS didn't ban 200-400 MHz. With that logic, you could say that RS has banned freqs
above 1300 MHz, too. Or below 30 MHz! Or the cell phone freqs! RS didn't ban them...
(cell phone freqs) the US Government did.

If every potential scanner buyer that wants a 200-400 MHz scanner indeed doesn't buy
anything from RS until January, they won't notice a thing. There are relatively so
few of us that it wouldn't make a blip on their "profit radar screen."

fact of life.

Andy

Message-ID: <3639d640.3484881@news.earthlink.net>
Source record: 139933

I'm trying to record off of my scanner. (Just for listening puposes, and will later erase.) I have a Realistic Pro 2024. (It's real basic but the price was right.) I have a small cassette recorder with v.o.c. and figured I could run the earphone output of the scanner into the mic. input of the recorder. I figured that way I could just record the broadcasts without getting the blank space in between or having backround noise set off the v.o.c. Unfortunatly the small hiss of the scanner is enough to set of the v.o.c. even with the volume set to minimum. Is there a way to make this work? (Possibly like a simple circuit involving a pot. in the input line.)
In a somewhat related question, where can I get electronic components south of Boston (aside from Radio Shack)? I know there was a very good store called "U Do It Electronics" but I can't remember where.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2006	R152 33K try 100K or higher.
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14
	on IC-1 MC3361
Radio Shack PRO-2035	100K replace 100K
	with 220K.
	Between pins 12 & 14
	of TK10420 (IC-2)
Electra/Bearcat 220	R75 2.7M may be ok as is
Electra/Bearcat 20/20	R75 2.7M may be ok as is
Electra/Bearcat 250	R66 2.2M may be ok as is
Uniden/Bearcat 760XLT	R58 22K replace with 6.8K
	or other value.
	(select value for
	the particular radio.)
	Located on pin 14
	of MC3359P IC
Uniden/Bearcat 800XLT	R91 860K replace with 2.2M.
	Located on pin 14
	of MC3359P IC
Plectron P1	R81 180K may be ok as is
Plectron 700	R96 180K replace with 560K

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign
on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the
actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to
him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the
"instructors". Mystery solved; I had been monitoring the
customer training center for a large computer manufacturer.
The training center has hotel rooms and dining facilities
to accommodate students from out of state. As a
convenience, shuttle van service is provided to local
shopping malls.

Summary

Through books, government records, and radio clubs, scanner
listeners can make use of frequency information compiled by
others. Two-way radio users often fail to identify their
transmissions properly, making it more difficult for
listeners to know who they are monitoring. By examining
radio equipment labeling, and monitoring and taping
transmissions, scanner enthusiasts can unearth new
information.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated September 14, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, Tom Harker, and ARRL for providing some of the information.

NOVEMBER 1998

Nov 22 (Sun), Wheaton, IL. GMRS Electronics Flea Market. Dupage County Fairgrounds. Sponsored by GMRS of Illinois, Inc. Admission $5. Kids under 12 free. Open for setup at 6:30 AM. Building doors open for buyers at 8 AM. Info: (815)756-3933 or (630)393-3937.

Nov 28 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

DECEMBER 1998

Dec 19 (Sat), Grayslake, IL. Computer Country Expo (see details below). Lake County Fairgrouds.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors,

diskettes, printers, keyboards, modems, disk drives, cables,
expansion boards, services, and anything else in the domain
of computers! Lake County Fairgrounds, Route 120 (Belvidere
Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000
sq. feet of everything Computer! For a show map, exhibitor
info, and discount coupon, visit the web site at

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 - 1998 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

PRO-7A: Channels 1 - 4 or 5 - 8 Dead

If the first or last 4 channels in your 8 channel PRO-7A crystal scanner are not working and the lamps for those channels won't light, replace IC4 or IC5 (type 7400A).

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1998 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem. |

Matt Roberds fixed a BC220 which experienced memory loss if | power was removed by resoldering the positive wire to 2-AA | battery holder. |

As built, the BC220 logic board is grounded only through | its mounting screws. In the BC220, Matt recommends adding | real wire ground jumpers from the main board to the feature | (logic) board to fix grounding problems.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be

heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually

available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. Gary Bean reports he substituted a 2SA1298 for Q201 and it worked fine. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab

from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

Sources for Replacement NiCd Battery Packs

Replacement NiCd battery packs and inserts for the BC100XLT, BC200XLT, BC2500XLT, BC3000XLT, and other scanners are available from Uniden. I've purchased them at lower cost from:

1. Mr. NiCd - E. H. Yost and Company, 2211-D Parview Rd., Middleton, WI 53562. tel. (608)831-3443. email ehyost@midplains.net

2. Battery-Tech Central, 2818 Southland Street SW, Cedar Rapids, IA 52404-4141. tel. (800)267-3087 or (319)364-0855. email rlassoc@inav.net

Batteries Plus has stores across they country and some have rebuilt Uniden NiCd packs for under $20.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable
Oct 1998 - AOR AR8200 portable
Nov 1998 - Alinco DJ-X10T portable

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech

inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with

little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the

schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel

interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen,

police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob.

Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging

capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring

Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn

on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range. IF frequencies are specified at 608.005 - 611.2 MHz, 48.5 MHz, and 455 kHz.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt

alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob

Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY

SC1PC: 1998 vintage. Good RF and audio performance. Covers 25 - 1300 MHz, minus cellular phone. Selectable step size and mode. Computer control and downloading with software and PC cable provided. Powered by ordinary AA batteries. Provided CDROM includes both the scanner control program and the multi million record PerCon FCC license database. 10 banks ("pages" in SONY parlance) of 30 channels each. Per-channel 2 second rescan delay. Unlike the ICOM IC-R10, you can scan any combination of memory banks. You can lock out ("skip") memory channels from scanning. The frequency stored in a skipped channel will also be skipped during searches. One priority channel checked every 5 seconds. SONY's limit search is restricted to one pair of search limits, though computer control expands this to 20 linkable pairs. Band search lets you search through 17 bands

programmed at the factory. Service search. A cache, termed Intelligent Memory, stores the last 10 unique frequencies that were active for longer than 5 seconds each. IFs (in MHz) are 600 (below 370 MHz), 232.5 (above 370 MHz), 45.0, and 0.455. See "The SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, August 1998, for a review which includes quantitative test results.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an

optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough

condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard

or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each,
but you must know the patent number. Credit card orders are
taken over the telephone by the Assistant Commissioner for
Patents at (703)305-4350. Alternatively, you can mail a
check or money order, made payable to "The Assistant
Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark
Office, call their automated information message system
toll-free at (800)786-9199.

There are various patent servers on the world wide web,
including IBM's server:

http://patent.womplex.ibm.com

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Meetings are usually held at: *

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants. |

All meetings are held on Saturdays at locations announced |
in advance. The next meeting is December 5, 1998 at |
Philly's. The 1999 meeting schedule is: Febuary 6, April |
3, June 5, August 1 October 2, and December 4.

Many good points were made in the above responce, however there is one thing that is being ASSUMED. That is, you are assuming the reason for the Mil scanner ban was do to profit margins. Radio Shack has never said this. If this was the true case then: 1) Why is Radio Shack making up stories of pulling remaining stock from the shelve to send back to Texas? 2) Why is Radio Shack saying they will bring Mil Scanners back in 1999? Won't they be just as much of a lose in 1999 as they are in 1998 from a profit standpoint? 3) I really like #2..... 4) And you are very correct, if every 200-400 scanner buyer boycotts R/S til January 1999 it wouldn't make a blip on the profit screen. But if all the scanner/radio/electronic hobbiest worked together, spread the word, and was able to get the general public involved, R/S WOULD see a blip, heck, they would see a hole on the profit screen. But do you think all the hobbiest would ever work together??? With people thinking list the above person my answer would be a big NO!

Come check out our new CDROM - "Scrambling Unleashed".

http://www.connectrix.com

It's packed with Projects, Service Information and Theory
related to all aspects of video scrambling. It's done in HTML
format and is compatible with any frames compatible browser.

We've even included the blank PC boards for some of the more
popular projects (2 descramblers and a copy guard remover).

Included is a full design for a 2300 MHZ downconverter
complete with board layouts and antenna designs.

It's worth a look

Get a REAL DEAL on the CE-232

How would you like to get a really good deal on the basic CE-232
Scanner/Computer interface ? For a very limited
time, they are going to be offered for $ 99.95 plus $ 7.50 shipping and
handling ! These are the basic CE232 kit. You wouldn`t want to miss out on
these for Chistmas ! This offer holds up through 12/1/98. There are a few
conditions:

1. You must order and prepay in advance, Mastercard , Visa , Money order ,
Certified check , cash , or personal check.

2. Commtronics will special - order the parts and materials for your kit and
ship when available.

3. You agree to a delivery date of 12/15/98. (We will ship them much sooner
if we can manage it).

4. You will not return the kit for any reason other than damage in shipping
, or at our request under special circumstances.

5. We assure that all specified parts and materials are included and any
defective parts will be replaced within 30 days after shipment, except the
68HC11 microprocesor, which is tested and known to be good prior to
shipping.

6. Tech support stictly by e-mail , fax , or postal mail.

7. No refunds. All sales are final.

If you agree to these conditions, then you can save yourself some money.

Went in to get some connectors today and what did I see on the shelf?

A shinny new PRO-2040 on clearance for $49.97. I don't have one, so I
can't comment on the unit..but it has 800mhz and is triple conversion
so how bad could it be.
The point is, RS clears out the old scanners all the time at super low
price! New models come and go, I'll bet a new milair capable scanner
will be back before 2000, and at time the PRO-90's will be 39.97 on
clearance and I'll get my first one!
BTW, I didn't buy the 2040 so there is at least one out there....

Hi! I have Radio Shack Pro-43 scanner for sale. It is one of the later models which is not cell restorable. No mods, a cosmetic 9, and perfectly functional. Includes the box, manual, 2 ducks, and AC adapter/charger.

Some specs:

200 channels (10 banks/20)
10 channel monitor bank (for quickly storing searched freqs.)

Covers:
30-54 MHz
118-174 MHz
220-512 MHz
806-1000 MHz (cell blocked)
AM/FM

$200 shipped to your door. No trades, please.

Please drop me a note if interested.

Cheers,

Paul WD8DKY

Well, I think a while back, even when they were broadcasting, all
the local shitheads who hung out on the frequency would talk over
the rebroadcast anyway. There was one pompous windbag in particular,
I forget his call.... I timed the jerk at almost 7 minutes of shooting
his mouth off into the mike (resetting the time out timer every few
minutes)..... with that kind of idiocy, why bother having a rebroadcast
to begin anyway ? Especially since the moron was talking over the
live launch tech traffic with his ideas on how to unclog a sink !!!

I love having military band on my scanner. I had a Pro-43 and a Pro-60 and I still have a Pro-26. They are all good scanners with military band. I have noticed that the scanners being made now receive much better. I have a Pro-91 that when hooked up to an outdoor ground plane antenna can pick up the ATIS frequencies at Houston's Intercontinental, Hobby and Hooks airports. When I hook up my Pro-26 I can't hear any of them. I do get lots of intermod though. I am not saying that the Pro-26 or any of the older RadioShack scanner are bad, but you might investigate some of the strengths of the newer scanners. The military air band will probably return to the RadioShack scanner lineup in the future. I understand that RadioShack is expecting to have an EDACS capable scanner next year. You may have noticed that RadioShack is concentrating on producing Trunktracker radios. I have worked for RadioShack since 1990 and I have NEVER had a customer come to me and ask for a scanner that is capable of receiving military air frequencies. Never ever. I DO have A LOT of people asking for TrunkTracker radios. So on the front burner for RadioShack are the Trunktrackers. On the back burner is military capabilities. There are still lots of scanners on the market that can pickup military air band. Why don't you check out one of those.

You have the right idea, but a small problem. The "mic" input of the recorder is designed for the very low output of a microphone. The "line" and "headphone" outputs of a scanner are comparitively high level and will overdrive the recorder at any volume setting. The solution is an attenuator. Radio Shack sells a 40db attenuator/adapter (#264-300) for $3.49. It accepts an RCA plug and fits an 1/8" jack on the recorder, so you may need an additional adapter to match whatever cord/jack/plug you have. R.S. was also supposed to sell an attenuator cable with 1/8" plug & jack, but I've never been able to find it in the catalog.

2893. PRO 2026 - Did I fry my Discriminator chip ? Help!

Newsgroup: rec.radio.scanner
Date: 1998-10-30 00:00:00 UTC
From: d-alden@concentric.net
Message-ID: <363a6308.6159771@news.concentric.net>
Source record: 139980

Some time back while experimenting with Pocsag etc. I tapped the baseband audio on my pro 2026 discriminator chip (NJM-3359D-A). All worked fine and I was able to decode pocsag etc.with the audio fed into my PC sound card and use the scanner in scan mode as usual.

Recently I turned the scanner on and found that the squelch no longer worked. If I try to scan I get no sound and the radio does not stop even on what I know are active frequencies. If I manualy enter an active frequency the radio does receive the signal.

Also the overall volume even with the knob at full volume is much less than it was before.

My questions are:

Is it possible that some feedback from my sound card fried the chip? I read that this chip is also used to control scan function (pin 15).

Would damaging this chip also affect the gain? Does it also have an amp in it?

Can I get a replacement chip from Radio shack? I think that I have the soldering skill to replace it but would I be better off letting Radio Shack repair it?

Is it even worth trying to repair or is it likely that much more has been damaged?

Any advice would be greatly appreciated!

Thanks - Dave Alden d-alden@concentric.net

2897. FS: R/S Pro 30 scanner for collector or beginner?

Newsgroup: rec.radio.scanner
Date: 1998-10-31 00:00:00 UTC
From: Ted Birckhead <birck@ibm.net>
Message-ID: <363BA283.D9686EA9@ibm.net>
Source record: 139734
Cross-posted to: rec.radio.scanner,alt.radio.scanner

It is a hand held scanner, probably 6-7 year old.

Coverage 30-54, 108-136, 138-174, 380-512 MHz,
16 channels for scanning.

Close to mint condition. It has manual, new memory batteries,
and R/S rechargeables and charger. Works well.

It has been used only a few times since I bought a 2006
five years ago.

Please make an offer if interested.

Thanks-

Ted--

Offers over $750 -
(I have a ICOM R-7000 & a PRO-2006 to use with this hardware device. Either one is available, and is posted on this newsgrop. Each receiver has it's + and -. I prefer the Icom with the DDI, others like it with the PRO 2006. I'll tell you what. All 3, the DDI/D, the Icom 7000, and the Pro 2006, for $2,000!!. What a deal! The 2006 has additionally the CE-232 interface)

Reply via E-mail

Specs:

The Digital Data Interpreter (DDI) subassembly analyzes digital computer protocols. The DDI is optimized for use with RF digital transmissions. The input to the DDI is an audio signal or 455khz IF signal like that from a radio. The output from the DDI is data over an RS-232 link. The DDI firmware/software may be used with off the shelf cellular phone protocols and pager protocols.
The DDI may be loaded with firmware to analyze protocols for a wide variety of applications. The popular cellular protocol analysis firmware will analyze all control data. Extended protocol data messages, VM notifications, messages, CLI orders and all AMPS, NAMPS, TDMA and CDMA control data is included. The standard DDI does not transfer the ESN.
The DDI is a PC board that must be incorporated into customers equipment for a specific application. CCS can assist in the development of specific systems, custom firmware and software.
The DDI is widely used in systems designed for cellular system diagnostics, statistics gathering, fraud detection, surveillance and propagation analysis.

Features:
Cellular firmware decodes AMPS, NAMPS, TACS, ETACS, wideband TDMA and CDMA systems.
Analyzes data on both forward, reverse, voice and control channels.
Host interface is RS-232 @ 19.2K baud.
General purpose PC software included.
Programmable to show only desired data.
Software issues frequency changes to some radios.
Software permits selection of desired data for display and logging separately.
Two on board relays may be used for control of external devices.
Automatically tunes and analyses data quality and signal strength on each control channel.
Presents information on all cellular parameters.
Decodes and displays DTMF codes on screen.

DDI/D
RFM, PRO-200x, AR-2500, AR-3000, R7000**, R7100
** No RECC
4" x 5" x 1.25"
The DDI/D subassembly has a power switch and power LED, 12VDC input, PC serial interface, relay controls and radio interface connector. Each subassembly includes a PC cable to mate with a 9 pin male.

Hello all:

I have the following items for sale:

1: Sony ICF-SW-100S As New, in box with all accessories, incl:
soft case, active antenna, earphone, AC plug, and manuals
http://www.sel.sony.com/SEL/consumer/ss5/home/radioclockradio/worldbandradiortmreceivers/icf-sw100s.shtml
$300

2: Standard C558A Dual Band HT. 2m/440 with wideband recieve, 200
channels, rapid charger. Mint Condition, manual incl, no box.

$325

3: Yupiteru MVT-7100 Wideband Reciever. .5-1600mhz, 1000 channels,
am/fm/fmw/usb/lsb/cw reception, mint with soft case, box, and
manual. Excellent scanner, Good shortwave. Comes with nicad
batteries, & DC plug. for additional info & review, see
http://www.strongsignals.net/htm/mvt-7100.htm
$275

All prices include shipping. For more details, email me.

Well
Now that a bunch of people ALL put in valid comments it appears that
common sense and not prejudice is reigning on the topic of trunking.
Someone should archive this last go-round and save it for the next time
someone asks about trunked radio systems.

First, YOUR opinion was not asked for & is not desired!

Second, can't you think up any new phrases to say? You wore out
the "living rent free......." statement with OBFD about 6 months ago.

Third, BILL is the one who is obsessed with me. His harassment of me
got himself kicked off of BOTH the Internet & Fidonet!!!! I have never
harassed Bill. However, I have held him accountable for his behavior.

Hi folks!

I had a set of wireless intercoms, the type that connect through the electrical wiring in your home. They don't actually have a "broadcast" signal at all, or I could verify frequencies with a scanner. I picked up a second set, only to discover that not all sets operate on the same frequency. Both sets are radio shack intercoms, one set is a little older than the other.

I suppose if I'd thought about this, I'd have realized the problem. Some of the wireless intercom sets actually come with a three position switch to operate on three different "channels", so there must be at least three frequencies they use, maybe more.

I realize these are borderline questions for this group, but I suspsected that somebody with an interest here might also know about these devices.

First, is it possible to *change* the frequency assignment in the individual units? Without a degree in electrical engineering, that is. I took a look in one and found an adjustment that would tune it out of the range of its mate, but not far enough to tune it into the range of the other pair. Essentially, a fine tuning control. I'm probably a felon now too for altering the frequency! ;-)

Also, if you can't change them, how the heck do you know what frequency they are on? At least if I knew that, I could locate another compatible set. Here's a clue: each unit has a sticker on the bottom. The two in one set say "9A4 A" on them and the other set says "10A2 TEC B". I inquired about one other set on the net and the seller said the sticker on those says "qc/7a5/tec". Duhhhhhh.

Anyone know the ins and outs of these devices?

Thanks!

- Dave

Some amateur radio 2 meter FM repeaters carry live air to
ground coms. Go here to get a list of shuttle freqs around the country:
http://www.amsat.org/amsat/sarex/shutfreq.html

If your in the NYC metro area try the W2FCL repeater in Northern N.J.
on 146.610. I pick this repeater up from about 100 miles away easily on an
Icom 2000H and a Ringo Ranger vertical up about 27 feet.

On HF, WA3NAN - the Goddard amateur radio club
re-transmits the missions on: 3.860 LSB (all freqs. in single side band)
7.185 LSB
14.285 USB
14.295 USB
21.390 USB
21.395 USB
28.650 USB

These are dependant on propagation! In South Eastern N.Y. I pick them up on
the 80 and 40 meter frequencies (the first 2) the best.
They I.D. in morse code and voice. Park on a freq. and listen awhile,
coms are not non-stop! There are sometimes long breaks in the action.
When the astronauts are asleep they are off the air. If the weather is
bad at the station or no control operator is available they won't be
on the air either. This is a volunteer service. Thanks to WA3NAN for
providing this service!

I haven't heard them re-broadcast yet but they usually do every mission.
Not sure why not now. By the way, they don't HAVE to do it. I think it's GREAT
that they do and I appreciate it.

73,
Tom

The hottest thing is
Patrick Masotta's Backup Program
http://members.tripod.com/~pcr1000/index.html
This program allows you to open up all the blocked cellular bands using the
software and without having to do any physical modification to the radio.
Rumor is that this software may result in the pcr1000 having to be withdrwn
from the US market or heavily redesigned.

Yep - It truly is a terrific scanner with all the features one could
want. The PC control software is a bit lacking, but hopefully AOR
will get that fixed soon.

Kansas Column 1198

1. Garden City area KDOT & City stuff
2. Arrowhead Stadium stuff
3. Lawrence/KU stuff
4. McPherson County stuffs
5. New Lenexa FD repeater stuff
6. Scanner Geek Get Together stuff
7. New computer/scanner program stuff
8. Incredible Leavenworth CO stuff

---

1. Dale had the following about Garden City. Here is his a quote from him:
"I attended a west region meeting today with the Supt. He advised that KDOT bought off on the need for the statewide 800 smartzone trunked system. The main purpose for this is data transmission so that all cars will have MDTs in them. The time frame is 5 years statewide with the east half of the state sooner due to already being 800 ready. Also mentioned was that any other agency could get on the system as well making mutual aid comms much better."
"They have installed the antennas for the Garden city 800 LTR system. I stand corrected, as this is not an SMR. Garden City bought the equipment outright and applied for 5 channels. I haven't heard any freq info yet."
Don got wind of Dale's quest for the frequencies and replied with this:
"The FCC site was down all weekend but just came back up. The freqs are 856-860.4375 call WPMI551. Again, it's a Kenwood system so the Trunk Tracker scanner won't follow, but as I've never monitored an LTR system I don't know how it sounds. My understanding is it may be pretty easy. Let me know!"

---

2. Gregg from Prairie Village checks in as a new reader of the column. Being an apparent Chiefs fan, he said to monitor 464.775 for activities at Arrowhead Stadium. I've listened in before, and it gets busier than KCMO PD center zone during a big game. Lots of screaming, fights, and disturbances. Good listening. Thanks, Gregg.

---

3. Chris, who lives far away, has occasion to visit the area often on business. He spent some quality time (which means monitoring) in Lawrence during the Colorado-KU game. He sent the results of his trip to us. Check it out. Chris and one of the Bobs compared notes on his findings, and they relayed their e-mail messages to me. Below some of the loggings that Chris has will be a comment from Bob. Bob's comments will be in capital letters.

"Here's a rundown on what I was able to snag at the Colorado-KU football game on 10/24/98. My monitoring location was under the west stands near the KUPD Mobile Command Post using an Optoscan 456 equipped PRO-2006."

KHP XMTR IN ESKRIDGE NEAR TOPEKA
868.8625 Kansas, State of - K.H.P. 34
868.8625 306 Kansas, State of - K.H.P. 171

"A couple of notes of interest;
ï¿½ The 463.8 & 468.8 frequencies were found after getting numerous hits on my Scout at the game. I don't know who the frequencies actually belong to but they were definitely game related simplex activity. The 463.8 frequency seemed to be coordination of PA and other game events, while the 468.8 was ticket and gate operations.
ï¿½ The hits I got on 866.7625 (Douglas County Jail) were simplex operations at the game. They were communications related to taking some persons to the county jail from the game. I can't say for sure who it was using this channel.
ï¿½ KUPD was using their 800 dispatch channel (867.675 MHz) in mainly simplex, but some units were using the repeater. The KUPD Command Post was always using simplex.
ï¿½ 154.515 MHz (Kansas Athletic Corp.) was very busy at the stadium before, during and after the game. Especially interesting was after the game when the stadium maintenance folks were out with KUPD looking for the remains of the two goal posts that were torn down following KU's victory over Colorado."
Bob had an additional comment for Chris and his findings. It is worth repeating if you ask me.
" Thanks again. It often takes a fresh pair of "ears" to pick off the new stuff. Us old-time residents become complacent and think we already know it all. :)" I guess it means that we should try to listen to our local systems as though we are doing so for the first time. That is hard to do, but with practice it might be a good thing.

Great work, Chris. Thanks for you time and effort.
---
4. Chance checked in for the first time. He hails from McPherson County, and sends to us the following list of frequencies and information.

McPherson County Edacs Trunked frequencies:

CH 1 866.075
CH 2 866.975
CH 3 868.450
CH 4 868.7875
CH 5 866.3625

Here are the 800 MHz Conv Repeater Freqs -

867.0125 - ROXBURY
866.775 - LINDSBURG
868.9875 - INMAN
867.4375 - MOUNDRIDGE
867.0125 - WINDOM
868.9875 - CANTON
866.0125 - McPHERSON

Paging is on 154.400 countywide.

"Two more State 800 MHz towers have gone up in my area. One is located six miles north of Galva and one three miles east of Lyons on 56 highway. Not sure if they are turned up."

Thanks, Chance. Keep in touch.

---

5. Lenexa is in the process of firing up one of 2 repeaters for their city FD's use. As most folks from Johnson County know, ALL fire and EMS is dispatched by the EOC at 6000 Lamar in Mission. Many cities have their own frequencies for their own use. They DO NOT dispatch calls on those frequencies. Lenexa's new repeater is on 154.145 (input of 154.950), and it has 6 receiver sites. Dave Dunford, our Technical Services Unit Manager (head radio guy) says with that many sites no one will have trouble hitting the repeater. Sites are at FD #1 (96 & Pflumm,) FD# 3 (83 & & 7 HW,) FD#4 (College and Lackman,) the water tower in De Soto, the PW Service Center at 79th & Cottonwood, and at the PD.

As a review, the EOC frequencies are:

154.250 Dispatch repeater
154.205 Channel 2 repeater
154.785 Tac 3 simplex
154.445 Tac 4 simplex
154.295 Tac 5 simplex
154.280 Mutual Aid ch 6

When you hear a FD unit go to a channel greater than channel 6, they are probably going to their own city frequency.

For a list of Johnson County cities that have their own FD frequency, look no further:

Leawood 154.325
Merriam 154.355
Olathe 154.845
Overland Park 460.575
Overland Park 460.600
Overland Park 460.6375

Some departments, like Overland Park, may/do have talkgroups on 800 MHz systems.

---

6. Sunday, October 25, about 15 scanner geeks (I wear the badge proudly) attended an informal meeting at the Lenexa Police Department. I must thank the department for allowing us to use the training room for our get-together. The guest speakers were Dave Dunford, our head radio guy, and my boss Steve Davidson (the HMFIC of dispatch.) On display were four different scanner setups. I had Trunker/Etrunker running, as well as a new program called Pro-Turbo. More on Pro-Turbo later. Gary had his BC895 and BC9000 cooking, Bob had a unique suitcase outfit running, and Rodger had Trunker/Etrunker running on a laptop and an AOR portable scanner. It was enough to have any propeller head drooling with desire. I missed talking to Bob about his gear, but I understand it was a portable computer/scanner combination that scanned several trunked systems as well as conventional frequencies. I will get with him one day soon and find out the details.

Dave spoke about EMWIN (rebroadcasting of satellite weather data for civilian reception,) the med channels in the Kansas City area, Johnson County's trunked system and a few other related subjects. Each of these topics was relevant because Dave had a hand in developing all of them. It was nice to get the scoop right from the horse's mouth.
Steve related the information he had on the big flood we had the week before. Luckily for me, I was on days off during that fiasco, so I didn't have to work. Steve came in and worked one of the phone banks for the duration. He had a good perspective of what went on. We started gabbing about 3:30 PM and didn't stop until 6:30. To try to summarize what we spoke about would take, ohï¿½about 3 hoursï¿½so I won't go into the details.
Six of us descended upon the Pizza Maker in Lenexa afterwards, and consumed mass quantities. I was greatly pleased with the turnout. Everyone I spoke with said it was an enjoyable and educational experience. Special thanks to Dave and Steve for coming in on their own time and talking with us.
---
7. Three years ago I built and installed Bill Cheek's CE-232 scanner interface in my PRO-2006. The CE-232 is different than the OPTO interfaces in several aspects. First, it is more of a "hacker's" interface. It requires a great amount of disassembly compared to the OPTO units. Bill Cheek once said that installing the CE-232 "ain't for the light-hearted." The CE-232 gives the scannist the opportunity to customize the program using a unique scripting language that isn't very hard to learn. Second, the CE-232 software is a DOS program.
Information about the CE-232 can be found by going to the Dejanews page. Simply type "www.dejanews.com" in the location field of your browser and wait for it to come up. Scroll down near the bottom of the page and click on "power search." In the subject field type "ce-232 overview," in the forum field type "rec.radio.scanner" and in the author field type "Bill Cheek." Go to the top of the page and click on find. You will get a list of articles, but the one you want to look at is labeled "Ce-232 overview."
Recently, a couple of guys from Ontario put together a Windows program that controls the CE-232 with even more functions than the DOS version. They call it Pro-Turbo. It is the neatest thing since a pocket on a shirt! To check out Pro-Turbo, go to this site:
http://www.iaw.on.ca/~jabba/pro-turbo.htm
PT has a screen graphic very similar to a PRO-2006, but it sports extra buttons and dials that the PRO-2006 lacks in real life. PT has 8 "gauges" that the user can interface with just about anything that provides an electrical current. The most obvious use is a signal strength meter, but it will work with a center tuning meter or any outside source that your imagination can come up with. You can control PT via the mouse by clicking on the screen, or by using keyboard commandsï¿½or both.
PT has a bunch of built in "scripts" that perform tedious operations for you. An example is one that locks out all channels with "zero" programmed in them. It will also search files for the user of a

frequency and display it when received. I wrote a script a year ago that scans along until a user defined target frequency becomes active. At that point, it reprograms bank 10 with a different set of frequencies and scans that bank only. It turns on the tape recorder, too. (I'll have to try to re-write it to use the digital recorder.) It stays this way for a user defined amount of time or until no transmissions are heard for a user defined amount of time, when it re-reprograms the last bank back the way it was and returns to the previous state it was in. Pro-Turbo works like a champ, but my favorite function is the digital recording feature. It is absolutely fantastic. PT will record all traffic that the scanner receives and log it to a file on your hard drive, or there is an option to record only delayed channels. That gives the scannist some unique control over what is recorded. Once you decide to listen to what is recorded, you can either listen to everything from all frequencies in chronological order, or you can click on a specific frequency and listen to everything recorded on that frequency only. It has a date/time stamp and all sorts of neat stuff. Imagine recording something important and being able to send the file to a friend via e-mail so he can hear it, too!

For those of you that would like a great alternative to the OPTO brand of scanner/computer interfaces, I highly recommend the CE-232 coupled with the Pro-Turbo program. I have 2 of the OPTO units, and they are going to be dedicated to working with Trunker/Etrunker, and my CE-232/Pro-Turbo unit will become my main scanning gear. The CE-232 will work only in a Pro-2004,5 or 6. The price of the Ce-232 is about the same as an OPTO unit, and the Pro-Turbo program is a mere $50. The best bet is to check out the web page noted above.

Last minute note about Pro-Turbo. The developers sent a program to me that will allow PT to monitor trunked systems (note the plural "systems") and conventional frequencies at the same time. It requires an additional computer, but nothing else. I haven't had time to try it out, but it looks intriguing.

These Pro-Turbo guys are Canadians. As I recall, the guy that is mainly responsible for developing Trunker/Etrunker is from Canada, too. Could it be something in the water up there, or perhaps the fresh air? Whatever the reason, I hope the Canadians keep on churning out the neat stuff.

---

8. One of the Bobs sent this list to several of the newsgroups on the net. I blatantly and openly stole it and inserted it here. This is the kind of list I'd like to see from many other areas. It is comprehensive and is properly explained. A person might think it was composed by someone who makes his living with words. ;-) Chris's list on Lawrence and Chance's list for McPherson County are similarly detailed submissions. It gave me the incentive to try it with my area, so look for a similar article for the Johnson County area soon. Here is Bob's Leavenworth County contribution:

"I reside in Leavenworth Co., KS around 15 mi. southwest of the city of Leavenworth where the US Penitentiary and the US Army fort of the same names are located along with the Wadsworth VA hospital and military

cemetery. Fedcom readers may wish to skip to the end of this post where the federal installations are. The State of KS also maintains men's and women's prisons in Lansing, a southern suburb of Leavenworth. So Leavenworth is a 'government town' in many ways. The rest of the county is rural farming country: beef cattle and buffalo, corn and soybeans."

39.46 KS intercity simplex, old freq.
39.56 LV Co. sheriff (SO), old freq.
39.58 KS law enforcement common, base/mobile
39.66 LV Co. SO mobiles, old freq.
39.70 KS law enforcement common, mobiles
39.74 Bashor, KS PD, old freq.

All 39 MHz. frequencies are being phased out and are virtually gone in LV Co.

46.44 LV city fire dept. (uncertain of activity)
147.000 LV amateur repeater (linked with EOC)
150.995 LV Co. road dept. 159.165 input
153.950 LV Co. fire/EMS, tac 1
154.280 Fire mutual aid
154.310 LV Co. fire/EMS, tac 2
154.385 LV Co. fire/EMS, dispatch. 150.805 input.
155.130 KS Correctional Facility, Lansing (state prison), simplex.
155.310 KS Correctional Facility, Lansing (state prison), repeater
156.150 input.
155.340 H.E.A.R. Leavenworth.
155.475 NLEEF (escaped prisoner searches)
155.535 KS Correctional Facility, Lansing (state prison), repeater
155.640 input.
155.820 LV Co. Emergency Management and local govt. 153.785 input.
158.745 Tonganoxie, KS local govt.
159.015 Use unknown. County roads?
453.200 LV city PD
453.350 LV city PD
453.700 LV city public works.
453.7125 Linwood, KS local govt.
458.6625 LV jail? Simplex usage in city of LV only.
458.7125 Linwood, KS local govt.
460.250 LV city fire dept.
851.5625 LV SO main dispatch channel
852.5625 LV SO tac channel
853.5625 LV SO, rural PD's, Lansing, Bashor, Tonganoxie
855.4875 LV SO, use unknown. Possibly new jail simplex.
866.0125 NPSPAC calling
866.5125 NPSPAC tac 1
868.675 Kansas Highway Patrol, Bonner Springs xmtr.

"Federal installations. Military and civil are listed separately here. Note that the US Penitentiary and the US Disciplinary Barracks, often thought of by the public as the 'same' are, in fact, completely distinct

entities and are over a mile apart. The military prison is on the Fort Leavenworth reservation and is run by the US Army. The USP is located west of the fort on its own reservation and is run by the DOJ's Bureau of Prisons."

"Fort Leavenworth. These listings are fairly old and I have not systematically monitored them for quite some time. Corrections and additions are invited. Several Army low-band frequencies are often listed for Fort Leavenworth's Command and General Staff School. I have never heard activity on any of them, and I omit them here. You can find them in Kneitel's federal listings."

139.350 Sherman AAF military airfield, "Sherman dispatch", a.m. mode.
143.400 US Army, Ft. Leav. unknown usage. AAF-451
150.525 US Army, Provost Marshal (no activity heard)
150.675 US Army, use unknown, no activity heard
164.100 Army, Base delivery.
164.500 US Army ambulances, AAF-412/7
164.9625 Army MP's, channel 2, AAF-413; base plectron receivers.
165.0625 Army MP's, channel 1, AAF-410/11/12.
165.1375 Army MP's, MP investigations?, AAF-453.
173.150 Army, use unknown, AAF-450.
173.4125 Army, paging.
173.4875 Army, US Disciplinary Barracks (military prison)
173.6125 Army, US Disciplinary Barracks (input to 173.4875?)
407.275 Army, mobile telephones, repeater output. Input: ?
409.425 Army fire department, 413.475 input, AAF-452
410.200 Army, engineering and utilities, 412.875 input.
412.900 Army Criminal Investigation Command, "charlie base" F-2.
413.425 Army Criminal Investigation Command, F-1, paging.

Other federal frequencies:
157.050 USCG, Leavenworth, KS; the cutter Gasconade.
157.100 USCG, Leavenworth, KS, Missouri River Group.
164.175 Wadsworth VA hospital, security and fire, 167.975 former repeater input. Present input unknown.
166.200 VA hospital listed. No activity heard.
166.975 Leavenworth National Cemetery, repeater. Input: ?
168.000 VA hospital listed. No activity heard.
168.575 VA hospital, paging.
170.650 US Prison, Leavenworth.
170.875 US Prison, Leavenworth, main operations.
170.925 US Prison, Leavenworth.

"The FBI maintains an RA at Leavenworth. No additional information is available. They presumably use the Kansas City repeater system (KEX-570). The USP is rumored to use a u.h.f. frequency for belt alarms within the prison. All USP's are scheduled for trunking."

Top of the line submission, Bob.

That's it this month. You guys did it again. Another great column.
Thank you, thank you, thank you!

Andy

To search...
press "manual", then enter the beginning frequency you'd like to start scanning at (including the decimal) then press the down arrow. then enter the upper frequency you'd like to end scanning at (decimal too) then press the down arrow. you have now set the search range. now press search, and this range will be automatically searched.

I don't have my 2004 schematic handy at the moment but
check for continuity from all of the matrixed lines
at the keypad right to the microprocessor (not just to CN502).
If they check out then have a look the other devices hanging off those
lines. If my memory serves me correct, I think the RAM chip is also
connected to some of the same lines.It could be suspect.
If not, the the micro may be bad. I'll look for my service manual
and give you more details to follow.

Cheers, Hugh

I wouldn't put the 8000 in the same league as I owned one and don't feel they are the same animal at all. The 8200 is better built, shielded, has better entry access from button (that don't squish) and side thumb wheel and arrow pad. the LCD window is larger (and not sunburned) like the the 8000 had from the factory. Not to mention more information being available. The audio is improved also.

for one thing you don't upset me
for two things you are no trouble to me

i know how small you are
and how much you try to
make it work ... but fail.

what racist remarks are you
talking about? knowing you it's
probably because i mentioned that
i read Little Black Sambo and enjoyed
it....or enjoyed reruns of Amos and Andy.

me...get upset because of you...this
i've got to let the check guy know about

"....ok, squeeze eyes tightly and put
your mind at rest and chant:
OH BILL CHEEK, messiah of stuff
beginning with HAM or Scanners
appear in your only way you know
how...with the brain of and the
contributions of mackey in the
other....show us your way with
this butt-futt."

i'm getting a resonance reading
of .8 .... it's happening.

bill cheek is speaking to me.

he's arisen.

he's even got a cross to show

he's about to speak"

"what the fuc you wake me up for?"

the end of the chance to talk with the Cheek guy so high
and mighty....

bill conduit
etc.

Yes, but why would R/S pull off their shelves Mil Air scanners while none of the other manufactures are?
Plus, for years on this news group you hear hundreds of people saying "Radio Shack Sucks" and stuff like that. When one or two people call for the group to boycott Radio Shack now all of a sudden No one wants to jump on the Radio Shack Sucks bandwagon.....I see there is a lot of banning together on this newsgroup. Nowonder Americans in this country are starting to lose their consitutional rights one at a time...

JW,
I've owned one for several months now. With the exception of the slow scan speed and what I see as poor power management, it is an excellent radio. The nicad battery packs that came with my radio don't seem to last as long as other similar ones i've used. Also once the 'low battery' indicator comes on, you might as well just shut the radio down right then - mine only goes about another minute before it shuts itself off.
Bottom line with this radio, is if you want to explore some of the less frequented parts of the spectrum not usually available to scanners - go for it. 1200 channels is a lot of listening.

Enjoy,
Marc

SB 1964 Vehicles: radar jamming devices.

BILL NUMBER: SB 1964 INTRODUCED 02/19/98

INTRODUCED BY Senator Costa

FEBRUARY 19, 1998

An act to add Article 17 (commencing with Section 28150) to
Chapter 5 of Division 12 of the Vehicle Code, relating to vehicles.

LEGISLATIVE COUNSEL'S DIGEST

SB 1964, as introduced, Costa. Vehicles: radar jamming devices.

(1) Existing law prohibits vehicles from being equipped with certain
equipment, including, among other things, theft alarm systems that emit
the sound of a siren, studded tires, and certain prohibited lighting
systems.

This bill would prohibit any vehicle from being equipped with any device
that is designed for, or is capable of, jamming, scrambling, neutralizing,
disabling, or otherwise interfering with radar or any other electronic
device
used by a law enforcement agency to measure the speed of moving objects.

The bill would also prohibit any person from using, buying, possessing,
manufacturing, selling, advertising for sale, or otherwise distributing
any device that is designed for, or is capable of, jamming, scrambling,
neutralizing, disabling, or otherwise interfering with radar or any other
electronic device used by a law enforcement agency to measure the speed
of moving objects.

Because a violation of these prohibitions would be an infraction under
other provisions of existing law, the bill would impose a state-mandated
program by creating a new crime.

SECTION 1. Article 17 (commencing with Section 28150) is added to Chapter 5
of Division 12 of the Vehicle Code, to read:

Article 17. Radar Jamming Devices

28150. (a) No vehicle shall be equipped with any device that is designed
for, or is capable of, jamming, scrambling, neutralizing, disabling, or
otherwise interfering with radar or any other electronic device used by
a law enforcement agency to measure the speed of moving objects.

(b) No person shall use, buy, possess, manufacture, sell, advertise for sale, or otherwise distribute any device that is designed for, or is capable of, jamming, scrambling, neutralizing, disabling, or otherwise interfering with radar or any other electronic device used by a law enforcement agency to measure the speed of moving objects.

You can't change the bands. Buy the European version of the scanner which would be the UBC-120XLT from a European dealer, or buy a full coverage scanner. There are many wideband scanners like the Sony SC1 which covers 25-1300mhz and 300 memmory channels and will run you around $260.
There are other ones too, like the Uniden BC2500XLT, BC3000XLT; Icom R1, R10; AOR 1000, 2700, 8000, 8200; and there are many many more.

You might check out ETRUNK.exe, which is a freeware developed utility that allows you to trunktrack an Ericsson EDACS system using a two scanner setup. One scanner to monitor the EDACS control channel, and one to be "controlled"

See http://web2.airmail.net/lblant1/dfw/digital.htm for more information on ETRUNK. You can download the application as well as view documents related to it's setup.

Good luck!

> someone could post them again.

Analog Cable TV systems operate on some of same frequencies as scanners
for example, channel 19 is from 150 to 156 MHz which is also the business
band for two-way radios. A 60 channel cable system would have a bandwith
from 54 Mhz to 450 Mhz.

You are probably looking for the Frequency Shift Key signal, (FSK), which
is the the same thing as a data channel on a 800 Mhz Trunked Radio system.

To find the FSK signal, use an adapter to connect the cable (for the TV)
to your FM Radio and scanner and tune to the FM and aircraft bands.
(turn of your computer when searching for the FSK, use Wide FM)

What is the make and model of your cable converter?

Go the the cable newsgroup ---> news:rec.video.cable-tv
and ask your question there.

This may or may not help.... I had an old pair of RS single channels intercoms. If memory serves me correctly, they broadcasted on a low AM frequency somewhere *below* the AM radio band. I forgot how I finally figured it out, but I do remember having to use my Sangean ATS-803A shortwave receiver to monitor them. When cordless phones first came out, I had an RS phone that did the same thing. The handset transmitted its side on 49.xx, but the base transmitted below the AM radio band.

Dewey.

From: n3jpu@erols.com
Message-ID: <363b53c9.1436797@news.erols.com>
Source record: 139843

FS or Trade: Voice Logging recorders

I have some Racal Wordsafe VHS voice logging recorders for sale or trade.

These are recorders used by 911 centers, DoD ATC and other applications for recording Radio and/or Telephone. These units record 32 channels on 2 T160 VHS tapes for 48+ hours (24+ hours per tape with automatic change over). The dimensions are 19" wide, 8.75" high.

The recorders on playback can automatically fast forward or reverse to the next message, play it and then go on to the next messages. Microprocessor controlled with many features. I can e-mail additional info if interested.

I have 2 rackmount recorders and 1 desktop version (and a 4th for spares).

All units are in extremely clean and have shipping boxes. These recorders originally sold for about $25K new. These were trade-in's that we took back and I can only get rid of them for hobbyist use (i.e. SWL, Scanning or Ham).

So if are looking for a professional way to record multiple radios this is it. They also work great as an audio multiplex unit as you can listen live to any combination of channels.

I am interested in trading for high quality radio equipment (commercial or mil-spec radio's, Ham equipment (looking for a 50 Mhz and 144 Mhz Amp of 400+ watts), wideband V/UHF receivers). Or possibly cash of $1000-$1500 each.

> Do not reply e-mail. I have an "ani-spam" address

Why would you need to?

Dial 911 or your local police. They have enough problems without
someone interfering with there channel. It's not going to get them
there any faster. I would suggest [not] trying to talk to the police
with your handheld ham radio. Things like your talking about happen
every day and sometimes when you don't know it through MDT or other
means thats why you should not even be on there with your hand held.
You could endanger officers lives who are at a distance trying to
communicate with the dispatcher. Even thoe you don't have the correct
squelchtone you could key over them causing them wasted valuable time
and even maybe there life.

Furthermore this also ruins scanner enthusiasts already tarnished
name.

>I'm going to disagree with Brian on one point - don't ask the
>technicians!!!!!

...and I'm going to disagree with you on that point. You struck a
nerve with me.

You have to collect information from ALL of the sources; the people
who have to piece the system together after the sale know its
strengths and weaknesses the best- especially if they're in-house
people and don't work for the vendor that sold the system.

>Typically technicians cannot offer a valid opinion about system
>operation. If they are not familiar with the technology involved
>(trunking for example) they will badmouth it no mattter what.

By now most professional technical people have had some exposure to
trunking. "Typical" is a dangerous generalization. Typical technicians
don't work on 33 MHz Motracs and HT-200s anymore. Trunking is actually
OLD technology now! I am seeing analog channels being turned off and
disconnected from the systems I put in in the 80s to make way for iDEN
and other new digital stuff.

FWIW, I've done a lot. Included in my past & present careers are
firefighting, law enforcement, technical, engineering and
administrative. I've fixed (and still do on the side) radios
professionally and designed six fire/ EMS communications centers
including microwave multiple DS1 networks and trunked and conventional
equipment (that worked, lasted years and, proudly, had less complaints
than other places)- and compared to my peers in the business, I am
"typical," just like them.

Doing your homework means getting EVERYONE's input, good or bad and
taking it at face value. Technicians know how well the system
operates. If it never Don't fool yourself.

>Get the opinions of the users - The fire grunts in the
>field! If it is good they will tell you so, if it is bad they will tell
>you (and exaggerate). If its a new system take any negative comments
>with a grain of salt - sometimes you have to get used to change (it
>appears to me that most firemen would be happier using the old fashioned
>cardboard megaphone than a radio - they just hate change).

Yes and no. A lot of things are traditionbound in the fire service.
Seems that most systems were not designed for the amount of portable

use that firefighting demands. Instead of blaming the system design, many fire departments condemn the "trunking" concept. You could trunk low band repeaters. It's just signalling. Make sure the fixed-end network is adequate- enough sites in good locations, no cut corners. An inadequate conventional (non-trunked) system won't work in the fire service, either. The worst incident I know of resulting in firefighter deaths where communications failure partially contributed to the loss (Hackensack, NJ 10 yrs ago- I was there) was on a VHF conventional repeater system, not 800 MHz trunked. But a bad 800 system could have done the same.

When in doubt remember: what'll work for a plumber is not necessarilly what works for the FD whether it's trunked or not!

>Unless you have some super knowledgeable engineer type on staff - hire a
>consultant. A good consultant already knows what you need and won't
>take any smoke from a salesman.

A good consultant will ANALYZE what you need from all of the variables. Anybody who saunters in and says they KNOW what you need without looking at your operation and providing substance is full of sh*t. Boot 'em in the ass on the way out!

Otherwise I think your comment about hiring a consultant is on the money.

From: tswisher@freenet.columbus.oh.us
Message-ID: <71e86v$7jb@login.freenet.columbus.oh.us>
Source record: 139851

All;

I've got for sale an AOR AR-900 that I just don't use much.

Freq coverage as follows:
27-54 MHz
108-174 MHz
406-512 MHz
830-950 MHz (unblocked)

Good condition, comes with wall wart-type charger, 2 antennas, box, etc.
100 channels, works great, quite sensitive, but I just don't use it much.
I bought it for railroad scanning, at which it is really excellent. It
does a good job on UHF also, as well as conventional 800. It was unblocked
when I got it, but since I have always felt that listening to that "certain"
service was about as exciting as watching paint dry, I've never used it there.
There's lots of legal stuff out there that's a heck of a lot more
interesting.

$125 or best offer over $75 takes it, reply via e-mail.

You need to drop the price. A cell restorable pro-43 goes for $200.00.
A non-restorable should go for about $160 - $170.

You don't have to have a calender in a scaner as such.

A scaner must have a timer and sensors, a comon sensing

function is t=min*hour/year . So even if you don't have a

a calender on your front panel of your scaner, you might find it

hidden in the electronics.

So think about it. ADI DORON 4Z4VG

From:
Dennis Cain <wedge@gate.net>

Di 04:35

Subject:
Alternate ICOM PCR-1000 Software

Here are websites with the best software that I have been able to find
for the ICOM Pcr-1000.

(Sorry ICOM, your software sucks)

This is Patrick Masotta's home page (This guy is my hero...)
http://members.tripod.com/~pcr1000/index.html

This is a cool site that has a program called "Pcrscope" Very nice
proggie!
http://208.133.53.38/pcr1000.html

This is another great site, for a great proggie. The program is called
"Talkpcr".
http://www.mahy.demon.co.uk/

Of course the list would'nt be complete without mentioning:
http://www.scancat.com
as soon as this guy gets online ordering, im gonna give him some buckies

for his great software.

A great DOS based PCR control program here:
http://www.bigbear.net/users/rransom/pcr.htm

These proggies I tried, and did'nt like (Or I could'nt get to work)
)-:
Visual Radio
SHOC radio

Come on guys! Get writing some more software!!! I need a free frequency
conversion program!
ICOM and these godd**n .MCH mother***kers!!!

Know of any good software for this neat little black box???

mailto:wedge@gate.net

Maybe the WR1500e (external) is a good choice. But I have not seen one personally. It costs much more than the WR1000 but maybe it has more possibilities for upgrading with better IF-filters and other components.

In addition a sample of some postings I did before. Some of them are in german (excuse me) but there are lots of germans reading this NG too (as

I do).

Wenn Du mit dem Gedanken spielen solltest mal an der Hardware was ï¿½ndern

zu wollen (bessere Filter fï¿½r SSB-Empfang auf Kurzwelle z.B.) vergiss es.
Aber fï¿½r "normalen" Rundfunkempfang und SSB-Empfang des Amateurfunks auf

Kurzwelle reichts - in etwa vergleichbar mit dem Sony 2001D. Im VHF/UHF-

Bereich ist das Teil spitze. Inzwischen gibt es auch zusï¿½tzliche Software fï¿½r den PCR.Fï¿½r weitere Info mail an mich und schau in das PCR1000-Archiv bei http://www.qth.net
und abonnier es.

Was die Empfangssituation angeht bin ich hier mitten in Berlin sehr abwechslungsreichen Bedingungen ausgesetzt. Au der einen Seite ist auf allen Frequenzen ne Menge los, andererseits gibts aber auch ne Menge QRN. Bis jetzt habe ich auch nur eine Behelfslï¿½sung "ï¿½bergangsdauerlï¿½sung_> :-)))" die aber recht vernï¿½nftig arbeitet. Ich benutze z.Zt. eine DV-lang CB-Funk-Antenne ca 2,7 mtr lang und habe die Alukaschierung der Dachbodenisolierung mit dem Maseanschluï¿½ des Antennenfuï¿½es verbunden- ist im 6. Obergeschoï¿½ ungeheuer wirksam! Damit ist passabler Kurzwellenempfang genauso mï¿½glich wie Amateurfunk auf 70 cm. Die Zuleitung zu meinem Shack im EG ist 25 mtr RG213-Kabel. Selbst bei dieser kurzen Antenne empfiehlt sich fï¿½r KW unbedingt ein Antennentuner/Preselector fï¿½r eine Vorselektion!

Der TNC-Anschluï¿½ ist ein FM-Diskriminatorausgang. D.h. daï¿½ Du hier das unbegrenzte FM-Signal zur Verfï¿½gung hast um digitale Signale abzunehmen und zu dekodieren, die den Frequenzlimiter der NF-Verstï¿½rkerstufe nicht "vertragen". Dazu gehï¿½ren z.B. Packetradio-Signale ab 9600 Bd und hï¿½her.

Um solche Signale zu verarbeiten braucht man entweder einen TNC (das ist

sozusagen ein kleiner Spezialcomputer der zwischen Empfï¿½nger und PC zwischengeschaltet wird um Packetradiosignale gezielt zu verarbeiten und

bei ausgeschaltetem PC zwischenzuspeichern), oder einen Analog/Digitalwandler (gibts in verschiedenen Ausfï¿½hrungen um digitale Signale u.a. auch CW, Fax, RTTY, POCSAG usw.in COM-Port-verstï¿½ndliche Signale zu wandeln).Diese haben aber keinen eigenen Speicher und sind auf "mitlaufen" des Computers angewiesen) oder sogar die Soundkarte (die

ist ja im Prinzip auch nichts anderes als ein duplexfï¿½higer Analog/Digitalwandler) angeschlosen. Welche Hard- und Software man zur decodierung einsetzt entscheidet im wesentlichen der Geldbeutel. In der neuesten Ausgabe von *Radiohï¿½ren und Scannen (9/98)* wird eine

hochinterressante Hard-und Software-Kombination vorgestellt:
Radio-Com_3.0 die fï¿½r den Preis von DM 358.00 wirklich sensationelles
leistet.

have a look at www://qth.net and have a look at the PCR1000 archieve
there and subscribe.

In my opinion it`s one of the best price-worth receiver. You will NOT
call it a specialist for scanning although it has some
scanning-functions. By ICOM its called a communications-receiver.
Performance on HF is a little bit better as the unmodified Sony ICF2001D

/2010. A modified 2001D with better IF-filters maybe better in some
cases. For receiving (mainly) on shortwave (so do I) the UT106 DSP-unit
is highly recommended. A big fault by ICOM are the 450khz IF-filters.
There are NONE better available around the whole world. I am now trying

to get a pair of new 450 khz-filters with 2.8khz bandwidth from my
ICOM-dealer as repair-parts. I want to switch them behind the other with

an amplifier-circuit to get a better shapefactor. On VHF/UHF it has an
exellent erformance. The Packet-Radio-connector is the
DISCRIMINATOR-output and very usefull for some digital decodings. But-
forget the antenne that comes with the PCR1000. A discone OUTSIDE the
house with UHF-whip is for shure the best you can do to this receiver.
With longer antennas on UHF it will overload. Even with that short
antenna an preselector like the YAESU FRT 7700 is very usefull.

At first: give your PCR1000 a good outdoor/rooftop (discone-)antenna
with a HF-whip. Use double-shielded low-loss cable. For use on HF a
preselektor is recommended because of overloading the frontend. Do a
research on the PCR-1000 archieve of the last few month and you will
find a lot of stuff and adresses for download. But BEFORE playing around

with ex-2099 do a EEPROM-backup with backPCR or PCRbur.

When anybody KNOWS (securely) an Manufacturer who builds 450khz
IF-filters with bandwidth less than 2,8khz and an acceptable shapefaktor

of 2.5 or better please post it or send me email. With two additional
filters of 300/500 and 1800/2200 Hertz it would be the very best
receiver for shortwave you could get for this low price. BUT WHERE TO
GET ??

Iï¿½ve changed some IF-filters in the ICOM PCR1000. I changed the
6khz-type to a 4khz (MURATA CFWS450IT) and put the 6khz to the holes of
the 15khz. In near future I will change it to a 9khz-type. For 15khz I
do not see real need. But this changes seem to give better receiving on
shortwave.

Is there anybody able to give a patch-program to me AND the group where
I can can give my own filter-specifications to for upgrading the
original ICOM-soft?(Ver 1.31)

Yes I have some experiences and I will tell you.
Until now I work a 1/4 wavelength CB-Antenna for all frequencys on the 6th floor under the roof of the house. Cable is 25 meters of RG213 to my

shack on ground-floor. I mainly receive on shortwave and sometimes on 4meter-band and to the HAMs on 2meter and 70 centimeter. There this antenna works very fine. It has a good "grounding" of appr.10x8 meters of metal-foil from the isolation. On shortwave I use a YAESU FRT 7700 preselector and it is VERY useful because of overloading the frontend with the "big guns" when receiving on HAM-bands or utility-stations. You

can still get the FRT7700 for new about her in Germany for less than DM 200,--
and sometimes used ones for half the price. In near future I will connect a discone and a FD4 longwire to my cable, switchable with an remote-controlled relay. All under the rooftop because I will not be allowed to go outside with my antennas. Go at least 10 meters away from your computer with a good shielded cable to connect an antenna!
My computer is a bigtower under my desk and the PCR1000 is in a rack over the monitor. I have ALL cables (low-voltage to the PCR, monitor-signal-cable and serial-cables also) exept the HF-wires :-)) fitted with toroids.
But I have still some marks every 75khz on HF but very low. Maybe it comes from the computer or from inside the PCR itself. The DSP works very fine on voice (do not use it with music!!) and in the HAM-bands. But I miss some functions for the digital modes like adjustable upper and lower frequency (bandpass) and peak/doublepeak-filters for CW, RTTY,

FAX and so. But its worth the price, some SSB-transmissions are only readable with DSP active.
An external DSP with all the functions I want costs the same as the whole PCR1000. :-((

I sent an email to ICOM some months ago and got a reply (automatically??)
that they received my comments but never get an answer if they would change something with the DSP-soft or with the IF-filters nor what they want to do with the 2nd additional port inside.

Ich habe eine Kopie des (grossen englischen) Manuals (als scan auf Datentrï¿½ger 25! MB)und die Kalibriersoft(2,6 MB). Bei Bedarf eine direkte mail an mich.

I have a scanned copy of the manual (25Megs) and the calibration-soft(2.6Megs)
When there is a need, please email me directly.

best regards

odo -from germany

Most likely this is not the cause. Electrostatic discharge most likely
started a "time bomb" ticking that wiped out part of the chip. Got
to be careful when soldering on the board, use a good iron like
Weller with a grounded tip, and about 25 Watts for most ICs.
Stay away from those cheap one sold by Rat Shack et al.
>
>Would damaging this chip also affect the gain? Does it also have an
>amp in it?
>

YUP, there is usually a Buffer Amp (i.e. Gain = 1) built into the
chip to alivate the loading effect from the next stage.

>Can I get a replacement chip from Radio shack? I think that I have
>the soldering skill to replace it but would I be better off letting
>Radio Shack repair it?

Someone well versed at using Solder Wick (tm) can get it out
with minimal damage but, it takes skill to do this. A Pace or Weller
desoldering station is the best bet.

As for Rat Shack, my experience from working in their stores is,
at best a "Pot Luck" experience some techs are good some were
not. Been some time since I work for them though. My opinion is
seek out a good repair shop to do the job.

>
>Is it even worth trying to repair or is it likely that much more has
>been damaged?

Cost of repair versus cost of Item. Last I heard labor rates ran
from
Flat Rate of $45 to $40 an hour depending who one was doing business
with.

They don't!
NYC uses 2,4,5,7,9,11,13(and some UHF ones too)

There are no TV channels using those allocations in the NYC area . CH#3
is a Philidelphia station , and CH #8 is out of Connecticut somewhere .

3003. pro-51 repair help

My sentiments exactly!

I've never owned a scanner with so much technology shoehorned into it.

Although my Pro-26/64/2045 were a breeze to learn, for me, the AR8200B
learning curve is a "little" steeper. :-) YMMV.

In article <71di4g$301$1@nova.thezone.net>, Orv <soultrain@thezone.net>
writes

Hi,

>Can anyone out there help me program frequencies into this scanner.

From memory the SR-900 was the same as the Bearcat 175XLT with 16
channels in total.

As with most Uniden sets quite easy to drive - just select a channel
with the MANUAL key and to store a specific frequency just key in that
frequency followed by enter - this would be then stored in the channel
displayed.

To Scan the memory channels just press the SCAN key.

I seem to recall it did have a search facility and to search between two
frequencies first key in a lower frequency followed by LIMIT then an
upper frequency followed by LIMIT. The SEARCH key would start a search
between these two frequencies.

Hope I'm not too far of the mark !

All the best
Cheers,

But - if followed leterally, these laws do not exempt scanners - they exempt amateur radio transceivers which happen to receive public service. Some cops may let it slide but some won't. If he get's his license and then listens on a transceiver then he would be safe, but a scanner is iffy...

In article <#AvchfKA#GA.126@nih2naac.prod2.compuserve.com>, 70035.140@CompuServe.COM says...

Common where? Internal (not meant for human reading) timers are
usually 'number of ticks since start-up' without regard to such
human-accommodating conventions as hours, days, years.

To give greatest accuracy about his FIDONET issue, Bill was
requested to leave fidonet.

> You are also lying when you state that Bill has gotten kicked off of
> the internet, although your lying have had him removed from one
> ISP.

Bill lost his internet access when his ISP revoked his access due
to abuses he committed.

So you made a statement that I lied to have him removed from his ISP.
What, exactly, were the lies I committed?

Your issues in this area are
meaningless, sorta like when I was in grade school some
kids either "flunked" or were "not allowed to pass into the next
grade". Regardless, the result is the same just like with Bill.

Sugarbabe... I'd not only *tell* 'em... I'd BRAG about it! :)

Anyone wanna compare rubber ducky lengths? Frequency?

Actually, I rather relish the questions about freqs... I have the Freq guide here, but I'm visually impaired (Bat CITY, Fringies!) and finding freqs in the columns of teeeeensy print is a real headache causer. So I pick stuph up off the ng. I wonder how many blind scannists are out there. The digital displays are a trip!

I know the newbie questions bug the regulars on *any* ng, but they are VERY useful to we who are still fresh and uncreased, the papercuts from the scanner wrappings on our fingers! We Who Are About To Learn Salute You!! :)

It is done to test spam filters for the betterment of e-mail users
on the internet everywhere. I am working as part of a team to design
a superior e-mail filter system. Most junk or spam e-mail is generated
by computers that scan newsgroups or mail lists for e-mail addresses .
Then those collected
e-mail addresses are sold to the people who send junk e-mail on the
internet.
By using different ID's it helps to test specific methods of filtering.

-Bill Cheek-

There is a growing interest in tapping the baseband audio out of
various scanners for decoding of a variety of esoteric signals,
including CTCSS, SCA, FSK, RTTY, FAX, etc. By and large, such
signals cannot be take from TAPE REC jacks, headphone jacks, and
EXT SPEAKER jacks because of the voice-band filtering that is done
between the signal source and these output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. The
below Table shows a list of scanners, the discriminator chip(s)
used in the scanner, circuit symbols of those chips, and three
pins of general interest on the chips: RF-Input, Scan Control,
and, of course, the baseband audio pin.

Even though your scanner may not be listed, if you can find its
discriminator chip, it will be listed with one or more scanners
below, the pins of which will be the same for your unlisted scanner!
Corrections and additions to this list are requested. See my email
and other addresses at the end of this file.

3024. Frequency counter help?

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: Jeff Freeman <red_nek@rocketmail.com>
Message-ID: <363CD4F7.AC079E30@rocketmail.com>
Source record: 139642

I recently pulled my old PRO-34 out of the drawer and started playing with it again. I wanted to dive a little deeper into the hobby, so I went to RS and picked up their frequency counter. It seemed like a good deal for $99. Anyway, I wanted to get some freq's, so I went to Taco Bell and hit the drive through. The problem is that I was only about 4 feet from the guy with the headset and the counter picked up nothing. I tried it again at a burger king. Still nothing. I know the settings were all right. I looked up the sensitivity and it varries between 10 to 18mV across the spectrum. Is this ok? I noticed that the optoelectronics techtoyz counter has a sensitivity of <5mV. My question is: Is the Radio Shack scanner a piece of junk, or am I doing something wrong? Would I be better off taking it back and getting the optoelectronics unit. Is there something I can do to improve the reception on the RS unit?

Also it seems that no matter where I am, inside, outside, wherever, the counter is always reading something at around 3 to 5MHz. Well anyway, if anyone can offer their 2 cents worth I would be greatful.

Thanks in advance.

Body handling: Binary attachment payload not displayed: sherwood.vcf

John,
I recently bought a Pro-90 and am quite satisfied with the unit. I live in an area of rural towns located 4-7 miles from each other, and receive all of them with good results. The scanner speaker leaves much to be desired. It's sad that they sell a $300 scanner with a 29 cent speaker. I'll probably spring for an external speaker for use at home.

Regards,

Bill...

From: tglunz@cnnw.net
Message-ID: <363ee512.3247429@betanews.supernews.com>
Source record: 139647

A Pro 2005 base set, 400 channels, good shape, full capabilities, only problem is the back light is very dim. I don't use it any more, I've got enough radios already so $250 or best offer takes it. low ball offers will be ignored, if you know what this is you know what it's worth. I also have a friends pro 60 now, he'd like $150 obo and its in good shape.
I would prefer a local sale to avoid all the hassles of shipping and so you'll actually see before you buy.
By the way I have the radio shack service manual
I'll throw in with the deal, and I have the original box and packing too if that excites any one. I had the owners manual but it's been swallowed in the house some where.(I found it)

I have a BC 855XLT manual. I will send for $5.00. E-mail if interested.

3034. BC895XLT Computer control port?

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: Theodore Bittner <tb4jesus@earthlink.net>
Message-ID: <363CF244.8FC23B2B@earthlink.net>
Source record: 139652

I just purchased a Uniden BC895XLT from Grove and was under the
impression that this unit could be controlled by my computer via a
rs-232 port on the scanner. My scanner has "remote" stamped on the back
of the chassis but is covered up by a piece of black plastic. At first I
thought this was just a cover plate for the computer port, but I can't
seem to pry the plastic off. Before i bugger up the scanner, I was
curious if anyone knows if some these scanners were built without the
control port to be sold at a cheaper price. No mention was made that
this radio would be any different than has been advertised by Uniden or
in Groves catalog. Just curious as I will ask for a replacement if it
should in fact have the control port as that was one of the factors that
influenced my decision to by this particular model.
Any help in this matter would be most appreciated. Thanks.

3038. Re: Pro-90 good choice for hand held?

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: Robert <rc123@globe-net.net>
Message-ID: <363D0035.259D@globe-net.net>
Source record: 139656

If you do buy a PRO-90, make sure you wait until it is on
sale. I bought mine for $199.99 at my local Radio Shack.
At the time, the Uniden BC235XLT (same guts as a PRO-90),
was more expensive. Now they are about the same price.
The BC235XLT is a little better deal. It includes an extra
battery and a slip in charger. At first, this sounds like a
MUCH better deal. However, the standard battery lasts for
more than 8 hours and though the PRO-90 doesn't have a slip
in charger, the charging jack on the side of the radio will
run the radio and charge the battery at the same time.
To me, it all breaks down to the following:

1. Do you prefer to do business locally or mail order?
2. Would having the capability of running your scanner
for more than 8hrs while away from a charger be a
benefit to you?

Though the PRO-91 does have the trunking feature, it is limited
to only 150 channels. This is NOT enough for most areas.
With the cost of memory chips so cheap today, it is nuts for the
manufacturer not to add more.

To read an unbiased review of radios, including the ones mentioned
above, visit Rich's website at
http://www.strongsignals.net/htm/radios.htm

Source record: 139658

I don't know of a "true" computer interface available
for your scanner. However, the PROgramit interface by
John Montalbano will work. It will not control your scanner
BUT it will allow you to program in the frequencies you have
loaded into a computer database. Once that is completed, remove
the interface and use the scanner as usual. When ready to change
to a new set of frequencies, connect the interface and reprogram
your scanner again. Sure beats having to manually enter each
frequency.

Details for the circuit can be found at my website:
http://dune.globe-net.net/~rc123/Robert/

John Montalbano's website:
http://www.qsl.net/ka2pyj/index.html

and Michael Jones' website:
http://www.spaceports.com/~mjones/

Was just having a vision a little while back about hooking up my
scanner to the cable lines in my house with a length of coax...
I have cable tv piped in and i was wondering if this would be an
inherantly BAD idea...
i mean to say, if i were to go out and get the coax and the right
connectors and hook the thing up, am i gonna fry something the second i
turn it on...or maybe long term damage?
by the way...i was envisioning attempting this with a Pro-90...

Thanks to all who respond...
if this IS indeed a BAD idea...send me some good ones will ya!

Thanks

The new version IC-Q7 1.00 Final beta is on

http://home.t-online.de/home/Ingra-Beton

Following changes/add/mods are made

- added Super-RX mode for Frequencies below 30MHz
- method described how to upload memories below 30MHz
- added copy/paste in the scan edges grid
- added pointer to remember Com Port
- The Software will not crash if the Q7 is not connected
or powered off, it will recognize now "IC-Q7 is off"
and "IC-Q7 not connected"
- added a "Del" button for erasing Frequencies
- extension for the data files changed to .Q7

Greetings, ...

"Not meant to elude?!?!?" What are you talking about Mackey? You're eluding filters. People figure out that you're a dirtball with nothing useful to post so they stick your handle in a filter file to keep your crap off their screen. But that doesn't work since you change your ID more than your underwear. You change ID's to worm around filters, don't you?

What other purpose would there be for all your different ID's if not to "elude" filters?

Can anyone believe this dirtball!?!?!? Testing E-mail filters my ass!

Looky here loony boy: you've been running that lie for the better part of a couple of years. You might as well give up on that one. You can't constantly lie about developing some filtering software and never produce it.

Hell, you can't even construct a decent paragraph; I wouldn't trust you to wire a friggin' flashlight!!!

E-mail filtering software my ass!

You friggin' loon.

wrong!

Case open (squeek)

Your own posting here on usenet from both present & past only serve to
demonstrate your intent to cause trouble. You seem to thrive on
& are very perverted. (remember the "Looking for young......" post!!)

case closed (SLAM and SLIDE goes the lock)

Correct, and this thread also was about scanning. So then WHY
did YOU chose to change the direction of discussion to focus on
ME?

So to use your own words:
here you are stirring up trouble again and again.

Why's that? It's because you have no other agenda but to to make a
spectacle of
yourself!

'nuff said!

Whoa-whoa-whoa! Are you sure about that John?

I mean, wasn't he a moderator of a Fidonet forum on scanners?

Maybe it slipped your mind. You know, ...think hard!.......wasn't it when he pulled your posting privilleges for carrying on pretty much like you do here?

Didn't he kick you off a Fidonet forum? (conference, echo,...whatever). Didn't he remove you from a conference that he had been appointed to moderate?

Ya know,.....that's what moderators do: Carry out the trash....Boot the useless & annoying.

Isn't that what *you* are John? Useless & annoying?

Don't ya hate this stuff thrown up in your face time and time again?

You friggin' loon.

3061. Arizona Frequency list

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: JA Moran <jamoran@analon.com>
Message-ID: <363D22E3.51E652BE@analon.com>
Source record: 139679
Cross-posted to: rec.radio.scanner,alt.radio.scanner

here is a listing of some Arizona frequencies from my database.

I frequently travel between Arizona and Southern California to visit my
girlfriend who is a professional wrestler and a web page designer. I usually
take 2 scanners and a CB with me. One scanner usually searches while the other
scans carious channels. Frequencies that are used in the Phoenix area are also
used in southern California. The maricopa County Sheriff's frequencies are used
by police agencies in Orange county, and also by some palm Springs area cities.
The Tempe Frequencies are used by Orange County Transit. Sometimes, cities that
aareon the same frequency use differnt Pl codes, while in other cases, they are
seperated by enough distance or by a mountain or hill..

It's a challange learning which agencies use what codes. In Arizona an accident
is a 961, in California, I think it's an 1185. Certain codes, like 10-28 nd
10-29, though seem to be universal.
The violation codes also differ. 692 is drunk driving in Arizona, not sure what
it is in Ca,

JOHN

>From: williarsch@nandomail.com

> Isn't there a name for selling something you don't have? There was a guy named Tucker who tried to sell cars that way.

I don't know. There is a name for someone who stirs up trouble without provocation, however.
"Williarsch." You need to get a life.So far all you been able to manage is being a Mackey sycophant.

3064. Pro-2036 Scanner with Marantz professional recorder

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: macoletta@aol.com
Message-ID: <19981101080405.00969.00002227@ng122.aol.com>
Source record: 139684

I have a Radio Shack Pro-2036 200 channel base scanner with CTCSS board installed, auto tape switch function, full AM Military air band, virtual downconverter modification and much more. Also included in the sale is a Marantz Professional Cassette Recorder t be used in conjunction with the scanner. All cables included to control and record your designated channels/frequencies.
This item is listed on Ebay until 5 Nov.
Enter the below web address to go directly to the item. A picture is included in the listing.

>From: willi_arsch@my-dejanews.com

>A bit naive of you, or perhaps you are letting on less than you know.

So, the great Williarse is going to shed light on another subject that he knows nothing about.

> The kits are being offered, not the assembled interface. I wonder what the >markup is on those bags of parts (plus assembly instructions and manual, of >course?)
>

Why is that any of your business? If you had a scanner, then you might consider buying this particular product or some other. That's what free trade is all about.

>Unfortunately, he seems to stay at the >level where he is only cheered on by a few pinheads in the newsgroups who >think they're his friends. Those folks don't make him a dime.

What is also unfortunate is that he is not here to defend himself from people like you who have nothing better to do. You don't make him a dime either. In fact, your sole purpose of your posting is to cast aspersions on his product and inhibit his business, just to satisfy some irrational jealousy and obsession. You are indeed an extraordinary hypocrite. Now run along Willie Boy. Your betters are sick of you. Come back when you get some cojones.

3066. Re: Need info on Regency MX7000

There is a fuse inside the MX7000. You may want to check that. It is in a black fuse holder that is mounted into a holder on the frame of the unit toward the back.

You probably aren't going to find a power adapter for that scanner anymore. Due to its odd shaped plug, it is not your common-variety barrel plug adapter unit. If you need to replace the AC adapter, get yourself a new jack (round type) and rewire the plug. The adapter itself was still a 12V, low milAmp supply which you can easily find at a local Radio Shack. Just watch your+ & - wiring connections!

As for being unblocked, that radio was manufactured before all the bureaucratic bs. You have un-interrupted scanning capability from 25Mhz to 1300Mhz, with great gain sensitivity, yet lots of intermod rejection selectivity.

Randy1038@aol.com

I have the following items for sale. Prices are negotiable. Shipping to be paid by buyer, US Money orders anly please.

Uniden Bearcat BCT-7 800MHz mobile scanner with wall charger/adapter, antenna. Unit 10/10 condition, has roadway Highway Partol Alert. New item cost $199, sell for $125.00 obo

Uniden Bearcat 350A, mobile with antenna, 12V car adapter, sell $50 obo

MAXON sl500 UHF 99 channel transceiver with battery/charger, works fine $100 obo

4" Sharp BW LCD NTSC input display with power supply, input 75ohm composite video, great for monitor $100.00 obo

APPLE Macintosh LCIII with 14" color monitor, keyboard/mouse, HP Deskwriter 680C color inkjet printer(mac), Zoom 33.6K modem(external), SyQuest Ez-Flyer 230MB tape backup (with 2 cartridges) and some software, unit works fine. Asking $250 for setup, will sell units separately.

CASIO RM-7400G Scientific Calculator with IR remote Over Head Projector screen unit. Calc does graphs, sketches and all scientific functions. Great shape, perfect for teaching with power supply for OHP(also uses batteries) Sell setup for $100.00

Panasonic SL-S162 Portable CD player, works great, no headphones to sell. Asking $35.00 obo

E-mail with questions..Thanks

For only $10 plus postage I can modify your scanner so that it will not be influenced by the Y2K bug. If you prefer to do it yourself I can send you the instructions for $20.

There sure is! Those names include...

Retailer!

Sales outlet!

Wholesaler!

MAIL ORDER HOUSE!

And others!

How about, that dasterdly old CAR DEALER!

All of these places will routinely sell you an item, and ship it to
you, or have it available for delivery, as soon as they recieve
it from the manufacturer. I usually order my cars that way, and
when I am out of stock on a certain radio, (Or a customer
wants a radio that we do not normally stock) I sell it, and
order it from Motorola.

Some customers of course are on 30 day net billing, but many
are not, and they pay on order.

Hmm. About the same markup as any of the upper end kit manufacturers?

Look at the real markup on the kits that are offered by other
manufacturers, the upper end of the technology, not the
AM transmitter kit, and I think you will find it is comparable
to what Bill charges.

> In any case, what COMMTRONICS might consider is to contract out the assembly

But, then the individual that purchased the KIT, would not
get to build a KIT, and learn about how the KIT operates,
or get the knowledge that one gets from building a KIT.

Two different products, a KIT, and an assembled product.

Do you remember Heathkit? Their color TV, which I built, was
more expensive than going down to the TV store, and buying
a KIT. I bought the KIT however, to learn with.

> But you can't raise capital by fighting with people in and out of the

OK, I understand now. Your comments above are not based on
the reality of business, but rather your personal feelings toward
Bill. That makes much more sense, but I might suggest that you
consider a better arguement when you wish to give the guy
grief.

Have a nice day.

3079. Re: PRO 2026 - Did I fry my Discriminator chip ? Help!

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: VE7SEZ <tkpoustie@nospamsprint.ca>
Message-ID: <ZD%_1.2326$qi1.1937349@HME2.newscontent-01.sprint.ca>
Source record: 139699

Did you try removing the discriminator tap to see if the effect goes away? I had a similar effect when trying to install a tap in my pro 25 handheld, which corrected when I got the right value of linking cap and resistor. If your series capacitance is too low a value it can cause this. Maybe yours was borderline and now something has gone a bit flakey. Remove it and see what happens.

On the other hand, it's probably a cheap part and fairly easy to replace as that is not a SMT radio. If you don't have one already, buy a solder sucker iron from Radio Shack to aid in removal of the old chip; I find they work better for me than solder wicks. Installation is the reverse of removal.(HEHE) Good luck.

3080. Newbie/ Help with PC interface.

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: Brian Trotter <btrotter@REMOVE.earthlink.net>
Message-ID: <363C837E.97578D3@REMOVE.earthlink.net>
Source record: 139700

I am new to the scanner scene, and am enjoying learning about my scanner, and the technology involved with it. I bought a used RS Pro-62 from an online auction, and have been having fun with it for a few weeks now. However, I keep reading a lot about people connecting their scanners to their PC's and using software to control the freqs and channels. How do you do this, and is it possible with my Pro-62? The Pro-62 is a handheld scanner, with no types of input ports except for a headphone port. I dont see how it could be done by using the headphone port.
I am a computer network technician, and understand the PC side of things very well, so if I could have someone explain the scanner side of it, I would be set.

If this can not be done, would anyone have any recommendations for anything that can be done with this scanner and a PC together?

Thanks for your help. If you reply to me via email, make sure you remove the word REMOVE out of my email address.

Is the Pro-90 a good choice for a hand held scanner? What other models would be comparable and perhaps a better value?

Doing a web search, I have had little luck locating a good site that evaluates and rates the various scanner units. Any help regarding this would be appreciated.

Regards, John H.

>A typical example of your senseless gibberish.

typical smacksey...the idoit behind
the slippery zipper

let me explain to you what is meant here.

Several educated people have e-mailed me
thanking me for my "surreal" post....it
was very vwell thought out....unlike

1. Will you

Ok...this means that only you are in
subject here. YOu are the full emphasis
of this schtick. Get it. Just you. NO
one else has thought of you. Just you. No
one else cares for you. Just you.

OK...you know, how you face each day
as you come out from underneath your
mana's underwear....

2. ...give a celebration of you...

What this means you menial midget is
that in order for you to get off on things
you have to set up a place to celebrate and
seeing as how there is only you, you are in
for a big disappointment. But you are very
stupid and don't read the messages on your
pubic sores and just don't learn..

3. ...and then no one came.

well, it don't take a rocket scientist to predict
this outcome. No one came to your funderal. YOU
see and yet you cannot perceive. No one came to
your funeral. YOu considered it a celebration and
others just did not think your funeral was the place

to be.

YOu see...people see you as a "messenger of the
"stuporific quadrant about life"....you are
the stupid link. The missing humungous. The
rotten core. The abysmal pecker. The forgotten
echo. What is that should never have been.

Now...have someone wave at you.

I just picked up a Uniden BearTracker BCT-7 scanner. I live in northeastern Pennsylvania.

* Are there any modifications that I could do to this unit? - Info please...

* I take it that the preprogramed frequencies for Pennsylvania are not complete. Where could I get a listing of other police freqencies to program into this?

* What do you think of this model? I got it primarily to help avoid speeding tickets, but I do enjoy tinkering around with it.

Thanks for any info....

Pope

Hi,

I am in search of specific information on how to tap the pro51 scanner for a discriminator tap. I have found info on the chips and pin information, however I need the specifics on how to perform this proceedure. I am assuming that I need to do a bit of soldering, do I need to tap the pin or disconnect it? Any help will be very welcomed.

Nope, Toilet Boy, he didn't say anything of the kind. The plain fact is that we all know that you are obssessed with Cheek to the point that he has been living rent free in your little pea brain for several years now. After Bill gave you the boot for your loudmouth antics on the Fideo radio forum, you haven't had a good night sleep. Why else would you still be haunting this newsgroup when you have nothing to contribute about scanning (in fact you have nothing worthwhile to say other than to play the fool).

3113. FreeTracker 2.4 was released (Computer program for BC895)

Newsgroup: rec.radio.scanner
Date: 1998-11-01 00:00:00 UTC
From: see.the@reply.to
Message-ID: <E714F55C22DDC65A.10FC8AE4B22F2D5E.3D63632FDA51D94F@library-proxy.airnews.net>
Source record: 139763
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Version 2.4 of FreeTracker was released with lots of new features.
Homepage: http://www.AutoWinNet.com/freetrack.html

FreeTracker is a Windows95/NT program for interfacing with your Uniden
BC895 TrunkTracking scanner.

Description:

- Supports up to 25,000 "Virtual Channels" which are like the radio's
normal channels, but add Callsign, Description, Color (for activity
log), Alarm, location, hit count, and more. VChannels can be scanned
for activity, or stored into your BC895

- Descriptions - You can store Descriptions, Callsigns, and Locations
for frequencies and Trunk Talkgroups/ID's. When that freq/talkgroup
appears, a description is shown, along with Callsign, City/State, etc.

- Alarms - You can assign a Wav file, graphic, .RTF file, speaker
beep, or run a script while that freq/group is active. For example,
have all local police codes shown during police calls. I just added
some Cool bitmaps that appear with local police and fire stations

- Colorful charts and graphs show you what frequencies/talkgroups are
most active

- Powerful script language lets you create your own custom scripts,
and run when a certain event happens on your scanner.

- PerCon database lookups from their web page (stored as html) can be
imported. Also imports from Grove, Probe, and PerCon Dbf files!

- Drag and Drop channel editing - throw any database entry to a
channel, or vice versa. If that frequency is already assigned, it
zooms to the channel # to avoid a duplication

- Activity Report is color coded - you can assign any color to any
specific freq/talkgroup

- Search Ranges - you can store up to 2,000 search ranges, then
double-click them to activate an immediate search of that frequency
range

- Lookup ham radio callsigns on QRZ cdrom

- Run custom queries against any FreeTracker database

- All BC895 keys are supported, allowing a virtual radio on your
desktop

- FreeTracker can be minimized as a TrayIcon

- Database-editing in a simple grid. Click the record you want, and change any value

- Communicate with your radio interactively - type any command in, and see the response.

- Power users can utilize the quick-command box. Simply key in a command word to change frequencies, channels, scan, hold, search, manual, etc.

- Export all scanner channels/freqs to a text file or Dbase, then import back into the scanner at a later date.

- Complete logging to a file, or printing just about anything.

- Export your VChannel/talkgroup database to a HTML file for posting on your favorite web page.

- Multiple copies can be run for multiple BC895 scanners

I don't understand the meaning of this message? The poster of the original message is letting people know about a special Bill is having on the CE-232 interfaces. The poster of course does not have the interfaces to sell because he does not sell them Bill does and the poster tells you that Bill has them.

Source record: 139774

anyone have a manual, or info on contacting Regency for an original??
did this unit come unblocked from the factory?? i might need a new AC
transformer, are these available from Regency (they use a three pront
jack at the scanner end)?? and are these units related to the AOR'S??
any info greatly appreciated.
right now, when plugged in, only the clock is working - i have to check
out the AC transformer first for power, than the unit itself. nay
hints??
tnx,
barry

The FCC's preemption of local laws (FCC ruling 93-410) was restricted
to ham transceivers, but the state laws themselves specifically exempt hams.
The states (FL, IN, KY, MI, Minn & NY) banned mobile scanners but then
exempted licensed amateurs, without regard to the type of equipment.

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

They actually DO have a transmit frequency. However, you will need a
shortwave receiver with Longwave capability to receive them. Their
frequency is somewhere around 200 kHz

Using what software? I have tried Radio Manager for Win 3.1-
supposedly everyone that I have talked to raves about it- but it has
caused me no end of trouble. On my 486 laptop anytime I try to close
the program it completly locks my PC up...
Oh yes, and writing Ben Saladino hasn't done much good...

That's the funkiest IP I've ever seen.

John, I have to apologize. I had assumed that given the information at hand, you would have been able to figure out my E-Mail address. I gave you the benefit of the doubt, and I did not realized that Dwenger was right; that you are incapable of deductive reasoning. I has assumed that since you knew my login name (SkizzikS) and my domain (ASU.EDU) you would have been able to determine my E-Mail address.

Again, I apologize. I'm sorry I had any faith in your intelligence. I'm sorry I didn't realize that you were unable to figure out such a simple combination as LoginName@Domain.Name = Valid E-Mail Address.

Please accept my humble apology. I won't bother you again.

-Skeeziks

As far as I know, while it is perfectly legal for you to *buy* a
cellular capable scanner in Canada or elsewhere outside the US, it is
against US law to import it into the US.

Just my $0.02

I had similar problem with my PRO 2022. I think it was poor soldering that did it. In any case, I sent it to G&G Communications for repair and for $45, it was fixed and a proper discriminator output installed. You can email Gerry at G&G at ggcomm@iinc.com or take a look at their web page. Gerry is very honest and does great work. It may take a while for him to get your unit back to you (mine took about six weeks) but I trust him a lot more than RS.

3164. FS-AOR 1000 channel handheld scanner w/SSB

Newsgroup: rec.radio.scanner
Date: 1998-11-02 00:00:00 UTC
From: ka4993gg@aol.com
Message-ID: <19981102101246.12012.00002504@ng144.aol.com>
Source record: 139540

I have an AR-1500 scanner which is virtually new in the box. This scanner is similar to the older AOR-1000, but a lot smaller and hasnumerous upgraded features. The radio has been seldom used and has been sitting in the closet in the box. I have the original manual, box, leather carrying case, ac charger, antenna, 4-"AAA" battery holder and the optional rechargeable battery pack.

The scanner works great and needs nothing. It covers 500 KHZ - 1300 MHZ without any gaps in am/fm/SSB modes. I'm asking $300 shipped/insured to the lower 48 States for this entire package.

For specs and reference information, someone is selling the same package at Ebay. Go to "ebay.com" go to search and type in "AR1500" under title search for the info. That scanner auction has several more days to go, and is currently bidding at $255.

Depends on whether you call 20 dB loss a large or a small problem.
Most folks would get very upset over a difference like that.

You may not see this kind of performance difference using a TV antenna
close to a flat metal roof, but even if you only see 10 dB difference,
that's an awful lot.

I'd turn the thing on its side, if I were doing this.

That is true and when a Canadian retailer knowingly sells illegal material to an U.S. customer and ships to the U.S., they would be at great risk. I have heard stories where the dealer is no longer allowed to enter the U.S. and all of his shipments to the U.S. are refused at the border. Not a good thing..... And this would be to "help" the U.S. customer, since it would not help the dealer. Rene VE6WCA (dutch)

> Boycott them, too!!!!
>

Sears, Wal-Mart and All-American truck stops ever sold Mil scanners, so therefore they never pulled them off the shelves. All I have to go on is what a RatShack salesperson told me, nothing more, nothing less.

If it is true that these scanners were "discontinued" due to cell phone images and we do not support eachother for what frequencies we enjoy listening too, what next, the police band??? Just think, what if images (or heavenforbid InterMod) of cell frequencies start showing up in the Police band???? Then your police band scanners will be temp-discontinued.... Come on people show a bit of support for your fellow hobbiest, stop the bickering with each other and help one another.....I"m doing my part, check out http://www.flash.net/~av8tor/radios to see my support of the Radio Shack boycott.....

There really is a 20dB loss buy having the antenna polarized in the wrong
direction???? I've played with this on a TV antenna a few years ago and
couldn't "hear" any difference so I left it horizonal. But that's the real
worked and not the "text-book" world....

Hello

Just to inform that AirNav - The Aircraft Tracking Software - has
a new homepage.
The new URL is:

http://www.airnavsystems.com

It is full of program Information, Screen Shots, downloadable
files including a 30 minute limited Demo.
I'm continuing to review the HF Information section and soonly it
will be one of the best www resources for the airband listener.

There is also an AirNav Screen Shot of North Atlantic Airspace
last nigth.
It is available at:

http://www.airnavsystems.com/shotex15.gif

Really hope this info is of your interest.
Let me know if you have any possible question or suggestion.

Best regards, Andre Brandao

Of course a lot of people don't really *know* about scanners and the
ability to tap into phone transmissions.

> Use a landline, a digital cellular or a digital
> cordless. If you choose not to, dont complain.

Here at Swanage Livermore Research (and Correctional) Facility and
Abbatoir, we believe in double security. Land-lines indoors, land-Mines
outdoors. Works quite well except that prowlers exploding on the front
lawn at three AM does tend to set the dog to barking. Problem, that...
Hasn't been a complaint, though since Kowalsky blew up. I think he was
the ringleader.

> If it's in the air, it's up for grabs.

that's what Mrs Kowalski said... She's in Reno now with a young Italian.
Her frequency's been increasong ever since...

> "Feel free to disagree"

I would, but I have to go reload the roof system and feed the pets. Do
take care! :)

I agree. I have done this with a female F to male BNC coupler that I bought at Radio Shack. It was my intention to find some FM radio on the cable lines - a service they once charged for - and was surprised to find that most of the pay per view channels were cablecast in the 88-108mhz area. No problem with signal strength either, I used my trusty AR1000XLT.

The writer asserts that it is easier to buy an automatic weapon than an unblocked scanner in the US. There's a lot of truth to that.

Dave,

Just a quick mention, the 4000 channel card cannot be searched or scanned.
It is only for backup and retrieval.

www.lentinicomm.com has the AR8200/B for $550 (including shipping) if that
helps.

For computer control get the CC8200 cable. It's pricey ($100?) but a must.
The windows software is free and the author is doing a great job of
improving it. You can download the software for free at
http://www.demon.co.uk/aor/software.htm. Even though you can't actually
use it at least you can see if it suits your needs.

Also, buy some high capacity rechargeable batteries. It sure sucks up the
juice! Panasonic makes 1100mA NiCads which is very good since alkaline
batteries cannot be in the unit when connected to the ac/dc or cigarette
lighter adapter!!!

Take it easy,

Andy

http://www.bearcat1.com/fleet.htm is one source for finding trunked radio system info. About the computer control part, I use PC895 and made my own cable. All this can be found by searching the Internet. I don't recall where exactly I found PC895 but I know the person that wrote it posts to this newsgroup. He can probably tell you where to get his program and the program includes info on how to create your own cable.

I have tried several brands now and find the "ULTRA" Duracell's to be the best. I have been using my 8200 now for 4 days a couple of hours a day and so far it is running strong without needing to change batteries. I am convinced that it is more efficient than the 8000, but then comparing the two is like comparing a Camry with a Mercedes "S" Class.

It was "a fidonet forum". Not "the fidonet forum" . Get your quotes right numbnuts. An echo is a forum. A newsgroup is a forum. And any other medium for the open exchange of opinions and ideas is a forum.

But you really didn't have to "leave" that echo (which is a forum, you moron). In fact, you lost your posting privilleges to that echo (which is a forum, in case you forgot loony boy).

That bugs you doesn't it? I don't see why it would. 'allsafe' is a perfectly serviceable handle for this NG. It's *always* allsafe. It keeps the filter users happy.

But would *you* like to eject me from this NG? (which is a forum, you moron).

You can do it.

Would you like to make it happen?

Interested?

You friggin' loon.

Source record: 139582

In article <363C12FC.4D25@worldnet.att.net>, barry
<btuttleman@worldnet.att.net> writes

Hi Barry,

>anyone have a manual, or info on contacting Regency for an original??
>did this unit come unblocked from the factory?? i might need a new AC

MX-5000 = AOR AR2001
25-550MHz, 20 channels.

MX-8000 = AOR AR2002
25-550MHz, 800-1300MHz, 20 channels.

The MX-7000 was a little "cross bred" as it had the 800-1300Mhz coverage
found on the MX-8000/AR2002 but was in the MX-5000/AR2001 case and has
the same pressure keypad as the MX5000 rather than the buttons found on
the MX-8000/AR2002.

>transformer, are these available from Regency (they use a three pront
>jack at the scanner end)?? and are these units related to the AOR'S??
>any info greatly appreciated.

The DC lead is standard for the AOR AR2001/AR2002/AR3000 and AR5000 so
you should be able to get the lead from AOR (USA) - if you have problems
we have them but if you do need a new AC adapter then you can probably
rescue the lead form the one you have anyway. The actual AC adapter
needs to be 12v DC, 500mA+ and if you don't have something suitable then
a replacement AC Adapter for the AR3000 or AR5000 will be OK.

Hope that helps a little.
Cheers,

I've always heard that the RS frequency counter is meant to be used for
bench work, not a "scanner counter." I think you'd be better off getting
a counter designed for use with scanners. Some of the Opto counters like
the Scout and the Cub are good for this.

But that's my opinion.

How about the scanradio echo on Fidonet? Are you going to say you
weren't booted off of it? How about all the echos where you are not
allowed to post? If you want to be persnickety and insist on
exactness, I'm sure someone would be glad to provide all the details.

I would say that it's not unreasonable. The PRO-60 isn't available
from RS anymore and it *does* have the Military Air bands.

Pawn shops aren't the best places to get good deals on anything but
having more knowledge than the pawnbroker can *sometimes* work
to your advantage.

James--
It's unlikely to provide you with any usable 'scannable' channels, unless you really want to listen to audio-only television. You would be better off (free advice) to use your coax to hook-up to an outdoor antenna. But, I doubt that you'll damage anything trying it, your basically doing the same thing that the cable company does when they hook-up your FM receiver, for instance. But the cable company doesn't (usually) carry fire, emt, or police channels. They don't have to, and it would interfere with other, more profitable, content.

I used FidoNet about 6 yrs ago - very handy with an OLR (OffLine
[news]Reader). BlueWave was my choice. You need to find a BBS that
carries a Fido feed - even if they are long distance. From there you
can get more info and find a local BBS - hopefully.

Not every BBS subscribes to a topic, but you can request a topic and
the sysop will turn it on if they choose to do so.

It's much like the Usenet NG's though.

Try this: http://www.fidonet.org/
It popped up a text page of HTML. Was able to manually change the URL
for each link.

Gawd, I bet you see those Black Helicopters, too.

Learn the REAL story. None were "pulled from the shelves"
as you so state becuz of Mil reception. The big stink was over
the Pro-26 which was recalled due to the fact you could V.D.-Mod
it into getting cell RX in the 300-400mHz range. This is a triple
conversion unit which produced virtually no cell images un-modded.
Of course, if u live next to a cell site, then you get them EVERYWHERE.
The units were eventually RE-INTRODUCED back to the stores
with epoxy covering the chip you needed to get at for the mod.

And yes, no current models have the Mil band included, but
most Rat-Shak customers dont give a rat's ass about Mil stuff.
Why dont you buy a REAL scanner like an AOR, YUPI, etc...
if you want the mil coverage and quit your bitching.
I'll sell you my Icom R-9000 for 10-grand if you want.
BTW, Lets see how many Mil band scanners you can buy
at Sears, Wal-Mart or All-American truck stops!
Boycott them, too!!!!

There is a pawn shop that I regularly go to, and pick up great deals on scanners such as $40.00 for a 2050 Trunk tracker, in addition to many others. There was one owner that thought a Pro-2006 was a CB :)

I have one of those things I got when they first came out, I haven't
used it much but it does it's job! I have snagged many many freqs with
it from near by radios! It helps if the are semi powerful- it gets my
cordless from about 4 feet and the sewer guys radio from 100.
Different antennas help also, there are better ones out there, but it
does serve its purpose!

Of course when I ask you a specific question forcing your to
provide honest responses you back off & try to change the
discussion. With this you get very hippocritical
by said I avoid the issue & ask redundant questions.

If you would answer the question, there would be not need
for redundancy.

So once again I ask:
Who are all these "several educated people"??

> "elude" filters?

It is done to test spam filters for the betterment of e-mail users
on the internet everywhere. I am working as part of a team to design
a superior e-mail filter system. Most junk or spam e-mail is generated
by computers that scan newsgroups or mail lists for e-mail addresses .
Then those collected e-mail addresses are sold to the people who send
junk e-mail on the internet. By using different ID's it helps to test
specific methods of filtering.

Actually, your company is interested in trying new ways to spam the
newsgroup, having consistantly flooded the scanner groups with your
crapola for months, and even attepting to post favourable comments
about your company with fabricated email addresses.

3247. Mechanical improvements AR-8200

Newsgroup: rec.radio.scanner
Date: 1998-11-02 00:00:00 UTC
From: "Aad@his.best" <AvStrien@usa.net>
Message-ID: <71k4a7kai1@newnews.nl.uu.net>
Source record: 139623
Cross-posted to: alt.radio.scanner,nl.radio.scanners,rec.radio.scanner

Hi folks,

You know I mentioned (among other points) the badly balanced rocker key, as well as the battery compartment requiring batteries to be hammered in place?

Both of them have been solved now (see below).

I also listed that my 8200 freezes for several minutes or even longer, but this symptom appears to have gone since I have programmed multiple frequencies in each and every bank (including J), as well as multiple search banks.

What remains are an intermittent PLL error while pressing MONI during power save cycle, slow response to the keyboard (documented but irritating) during power save, slow scrolling through sparsely filled memory (again, documented but frustrating) etc.

Kind regards, Aad van Strien

Solutions come here:

==========

For the rocker key I had to press very firmly to activate the left and down arrows, whereas up and righ went (even too) smoothly.

Solution:

1) Press the rocker in the hard direction (in my case, left arrow), and carefully note the places where the rocker hits the green scanner case. This place causes the rocker to scratch the case and thus go hard.
2) Next, with the use of two small screw drivers under opposite sides of the rocker key, gently lift off the rocker key from the scanner.
3) Remove slices off the grey rocker key at the place where it touched the green case.
4) Re-insert the rocker in place (press firmly in the middle until it clicks into position).
5) Try the key in each direction, eventually repeat until it runs smoothly in each of the 4 directions.
6) If the rocker key runs too smoothly, insert a piece of rubber, gum, ot whatever.

BTW you might, instead of reshaping your rocker key, also remodel your scanner case, but it seems to me less dangerous to put your knife in an isolated rocker key than in a case stewed with electronics ...

==========

For the batteries I needed a hammer to get them in proper position, and a screwdriver to get them out again.

Solution:

1) Inside the battery compartment you will find 4 springs that take the negative side of a penlite, and 4 flat spirals for the plus-side. Locate these flat spirals.
2) These flat spirals are contained in 2 crescent-shaped rims, with an opening inbetween facing you. These passes are too narrow to let the plus-side of a battery go through (unless you have batteries with very narrow plus-sides).
3) Using a sharp knife or razor blade carefully remove tiny parts (1/32" or less, 1 mm or less) from these rims to widen each of the 4 passes.
4) Check by inserting your penlites. What a world of difference ...

==========

These physical upgrades surely don't yield you a mint 8200, but surely one which is better than the original one.

This must be top secret government research, since no one I can find has ever heard of it. (Don't worry, John, I won't tell "them" that you spilled the beans.) You and your "team" may be interested to know that most of the recognized providers of e-mail service already provide spam filtering in their software. You apparently are also unaware that for a few dollars you can buy software that will harvest e-mail addresses, so who would be stupid enough to pay for such a list? Does your software automatically generate the bogus ID's you use, or do you have to do it manually? (I call them bogus because you said you only had three valid ID's "assigned" to you, so the half dozen or so others that Kay Patterson turned up must be "assigned" to someone else). By the way, who else is on the research "team"? Can you tell us, or did you all perform the secret handshake and swear not to reveal the names of the secret cabal? Except yours, of course. One of yours, anyway.

Most of the threads here have to do with scanning, and those have nothing to do with you clown boy, but yet, here you are stirring up trouble again and again. Why's that? It's because you have no other agenda but to to make a spectacle of yourself and continually obsess about Cheek planting a size 13 on your backside and kicking your butt out of a scanning group.

The problem I see with the term "equip a vehicle with" is I don't
belive that a person in a vehicle holding a handheld scanner can legally
be considered as "equiping a vehicle"!
And lucky for me I'll be able to find out first hand as I am moving to
the Detroit area the end of the month. :)

I get pull over / stop by cop as i was speeding in the school zone, watching pretty girls playing and he noticed a frequency counter on the front seat. I say i never saw it before and he asked me what is it for and then he kept it. I got no police ticket , I don't think it is against laws of any human country to have Frequency counter in front of toyota. Don't we each have rights? I called my lawyer who is also my blind uncle, and he let go his functions in the chair. We went to police and one of them said, "Can't you keep track of your own items?" I got mad. I don't know where else to run from. I been in this country since almost seven months and I get no ridicule from police, just friends. Now they each harass me.
I believe america was country of dreams, and cornfields with no harassment from police, however i am rethinking.. My children don't like this place, and they are mad and the want they to go home to their mother. I tell them I one undercover officer, and am dismantleing the government and they feel better, though I want to kill my self because I am lying. Police should not help them selves to stuff , even if it is not theirs from another country. They should help me to my stuff.
Can i partake of law banning them to do this? Do you know of Federal witness immigrant crime program that to help me. I make little money, but I raise 100 different animals (released from zoo) that i want to sell. Yes Emilio Come back again.

Our local emergency management was using cell phones during Hurricane
Bertha (97). Cell phone service was the first to go(NO SERVICE lights
on). Land line service was available only in certain areas of the
county. The back-up power for the EMS repeater went out too. The only
things left working at the EMS headquaters were ham radios on 12v car
batteries.
I never did find out exactly why the cell phones went out.

MOTOROLA TALKABOUT DISTANCE DPS FEATURES

10 Channels
2 Watts of Power
38 CTCSS Codes
Removable Belt Clip
Removable antenna
Talk Range Up to 5 Miles
Nicad Battery and Charger
Built in VOX (Voice Activated Transmission)
Available in 3 Colors (Grey, Yellow and Camo)

http://www.swscommunications.com/dps.htm

What is the General Mobile Radio Service?

The General Mobile Radio Service ("GMRS") is a personal radio service
available to an individual (one man or one woman). It is a two-way voice
communication service to facilitate the activities of the individual's
immediate family members. Expect a communications range of five to
twenty-five miles. You cannot make a telephone call with a GMRS unit.

Do I need a license?

Yes. Before any station transmits on any channel authorized in the GMRS
from any point within or over the territorial limits of any area where
radio services are regulated by the FCC, the responsible party must
obtain a license for a GMRS system.

An individual 18 years of age or older, who is not a representative
of a foreign government, is eligible to apply for a GMRS system license.
Application for a GMRS system license is made on FCC Form 574.

A booklet entitled Instructions for Completion of FCC Form 574 is helpful
in preparing the application. There is a filing fee. For information on
fees see our Fee Information page.

http://www.fcc.gov/wtb/csinfo/feeinfo.html

Which GMRS channels may I use?

There are twenty-three GMRS channels. None of the GMRS channels are
assigned for the exclusive use of any system. License applicants and

licensees must cooperate in the selection and use of the channels in order to make the most effective use of them and to reduce the possibility of interference.

Any mobile station or small base station in a GMRS system operating in the simplex mode may transmit voice type emissions with no more than 5 watts ERP on the following 462 MHz channels:

462.5625,
462.5875,
462.6125,
462.6375,
462.6625,
462.6875 and
462.7125 MHz. These channels are shared with the Family Radio Service.

Any mobile station in a GMRS system may transmit on the 467.675 MHz channel to communicate through a mobile relay station transmitting on the 462.675 MHz channel.

The communications must be for the purpose of soliciting or rendering assistance to a traveler, or for communicating in an emergency pertaining to the immediate safety of life or the immediate protection of property.

Each GMRS system license assigns one or two of eight possible channels or channel pairs (one 462 MHz channel and one 467 MHz channel spaced 5 MHz apart), as requested by the applicant.

Applicants for GMRS system licenses are advised to investigate or monitor in order to determine the best available channel(s) before making their selection. Each applicant must select the channel(s) or channel pair(s)for the stations in the proposed system from the following list:

For a base station, mobile relay station, fixed station or mobile station:
462.550,
462.575,
462.600,
462.625,
462.650,
462.675,
462.700 and
462.725 MHz.

For a mobile station, control station or fixed station in a duplex system:
467.550,
467.575,
467.600,
467.625,
467.650,
467.675,
467.700 and
467.725 MHz.

Every GMRS system station operator must cooperate in sharing the assigned channel with station operators in other GMRS systems by monitoring the channel before initiating transmissions, waiting until communications in progress are completed before initiating transmissions, engaging in only permissible communications and limiting transmissions to the minimum practical transmission time.

http://www.fcc.gov/wtb/prs/genmbl.html

FRS is an unlicensed service, and there are almost no restrictions on the content of FRS communications. The FRS channel frequencies are:

From the _Michigan Compiled Laws_:

Michigan Penal Code Section 750.508

750.508. Vehicles equipped with short wave length radio receiving sets

(1) Any person who shall equip a vehicle with a radio receiving set that will receive signals sent on frequencies assigned by the Federal Communications Commission of the United States of America for police purposes, or use the same in this state unless such vehicle is used or owned by a peace officer, or a bona fide amateur radio operator holding a technician class, general, advanced, or extra class amateur license issued by the Federal Communications Commission, without first securing a permit to do so from the Director of the Department of State Police upon application as he or she may prescribe, shall be guilty of a misdemeanor, punishable by imprisionment in the county jail for not more than 1 year, or by a fine of not more than $500,00, or by both fine and imprisionment in the discretion of the court.

(2) This section shall not be construed as restricting the use of radar detectors.

Amended by P.A.1990, No. 77, Section 1, Imd. Eff. May 24.

Historical and Statutory Notes

Source:

P.A.1931, No. 328, Section 508, Eff. Sept. 18
P.A.1939, No. 295, Eff. Sept. 29
C.L.1948, Section 750.508
P.A.1957, No. 242, Section 1, Eff. Sept. 27
C.L.1970, Section 750.508
The 1990 amendment inserted the subsection numbering; in subsec.(1), substituited "technician class" for "conditional" and "director of the department of" for "commissioner of the Michigan", inserted "or she" and "for" following "county jail", and deleted "such" preceding "application" and "fine and imprisionment"; and added subsec. (2).

Prior Laws:

P.A.1929, No. 152, Section 5.
C.L.1929, Section 578.

AOR has their CC8200 ($110).
Javiation has the JAV-232 ($100 + $15? for the OS-8200) and
RS-8200 ($60).

While the JAV-232 costs about the same as the CC8200, it
offers more functionality than the CC8200. If you can do
without the tape recorder control, the RS-8200 will
probably be the best value.

Talk to Jonathan at Javiation for full details.

Cross-posted to: rec.radio.scanner,rec.radio.amateur.equipment

Hello all!

I have a couple of Relm RH256 16-channel VHF radios that I'd like
to program. I already have most of the information on how to set
the internal jumper and program it via the keypad. The keypad
programming seems to work fine on both radios. But I've seen
a couple of these and other Relm radios with a print-out of the
frequencies and options installed, and the print-outs are identical
in form (not content, obviously). This leads me to think that
there is some way to program these radios with a PC and some software.
I already opened up the radios and looked for a handy silk-screen
saying "Connect RS232 here and set for 1200 8N1". No such luck. :)

Does anyone know if programming these radios with a computer is
possible? If so, how do I hook it up? Can I use a serial port,
a terminal emulator and ASCII or do I need special hardware or
software? Any information or tips would be appreciated. Thanks!

Matt Roberds

3282. WordLine Pager; Changing duplicate message?

Newsgroup: rec.radio.scanner
Date: 1998-11-03 00:00:00 UTC
From: ellisd@my-dejanews.com
Message-ID: <71n60n$8tb$1@nnrp1.dejanews.com>
Source record: 139445

Can anyone tell me how I can change the word "duplicate" on my WordLine pager to say anything else but duplicate? I know that if I disable the duplicate mode I would receive the same message no matter how many times it is transmitted to my pager. What I am trying to do is keep the duplicate mode, but change the word "Duplicate" to say something else. Is this possible with WordLine? I know that you can do it with the Advisor pro pager.

Thanks for any help you may offer.
Dave

With all due respect sir (MAlexder) I have owned or extensively played with the following. Radio Shack 2006, Pro43, Yupiteru MVT7100, 9000, Relm HS200, Uniden 8500, 9000xlt, AOR8000 and probably several others that don't come to mind. After having been a serious Shortwave and Scanner enthusiast for over the last 35 years, I can without hesitation say that the AOR8200 has raised the watermark for scanners a couple of notches in both features and performance. While I can't say as to whether there may be some folks out there with some early production pieces with problems, mine is nothing short of amazing. Definitely and I say definitely way beyond anything currently available out there. Believe me, that if I hadn't found this out to be a "FACT" for myself, I darn sure wouldn't say it here as I have absolutely nothing to gain from it, only enjoyment. I also own a PCR1000 with the DSP module. It also does a remarkable job but not even close to the 8200. The software for the 8200 took a little massaging to get up and running, but now is a real asset. Good Luck

You bought the scanner, so it's good that you are so satisfied, although you seem awfully defensive about it. I personally wouldn't buy an 8200 at this particular time.

I guess the first piece of news for you is that monitoring any telephone conversation is illegal under federal
law. That being said, you should definitely avoid scanning from 43.72 to 46.97 MHz as some cordless phones use
this band. Be absolutely sure to avoid 49.83, 49.845, 49.86, 49.875, and 49.89 as baby monitors are found
on these 5 frequencies. Sometimes Mom and Dad forget to turn off this little gem when they turn out the
lights and then unknowingly give the whole block a program more graphic than Springer. Since you cannot
directly access cellular telephone frequencies, you should avoid any frequency in which your scanner might be
picking up image frequencies of cell phones. Frequencies in the 900-915 MHz range or maybe the 330-380 MHz
range (not sure if the PRO 2040 is dual or triple conversion) sometimes produce "interfering" image reception
of cell tower transmissions blocking out the more exciting 902 MHz amateur radio band or the
edge-of-your-seat military aviation band.

Caveat Receptor,
Steve

Hi Bob.

This is called Cellular Digital Packet Data. Basically, it is a
digital cellular telephone network. Most cellphone companies that offer
digital cellular are going to public safety agencies and offering this
service beacuse in most cases it is more cost efficient than putting up
a private mobile data terminal system.
There is another public safety service in Colorado that I know of that
does the same thing. CDPD is not available, however, in the entire
country. It's not here in Vermont yet.
Hope this helped you out.

Which AOR 8200 computer link should I buy? I need db-9, and
understand that AOR will be coming out with their own and also that
Javiation sells one as well. Thanks for any tips, suggestions.

I personally like and use the 1000i card. It would have to be the best value for money scanner available, particularly when you take into account all the things that it can do.

I'd say go for it. But thats my opinion!

Cheers
Wayne

James Pryor <pryors@erols.com>
from thoughtfully posted:

> Was just having a vision a little while back about hooking up my
> scanner to the cable lines in my house with a length of coax...
> I have cable tv piped in and i was wondering if this would be an
> inherantly BAD idea...
> i mean to say, if i were to go out and get the coax and the right
> connectors and hook the thing up, am i gonna fry something the second i
> turn it on...or maybe long term damage?
> by the way...i was envisioning attempting this with a Pro-90...

Ferget it. Won't work. You won't "fry" anything - but there will
be little to listen to (except maybe the audio of the TV
channels).

First - we are assuming a "Cable Company" (CATV), and not a
shared "Master Antenna" system (as you would find in an apartment
complex).

1. The cable company uses the bands that you normally associate
with mobile radio to carry more TV channels. Remember - it is
(supposed) to be a closed system (signals stay inside the cable)
- so those "cable" TV channels won't interfere with any radios.

2. To prevent "ghosts" and image distortion - no signal is placed
on the cable system from an antenna without first going through
heavy filtering and/or being "re-generated" (received then
re-transmitted).

Since the Cable trunks are well shielded, and the cables in your
house are *supposed* to be well shielded - there will be very
little signals from the outside getting in.

You literally would get better reception with the proverbial "wet
noodle".

Cheers,
Paul Grohe

It has not been easy to buy an automatic weapon in the U.S. since the
National Firearms Act of 1934 was passed. I think you are confusing
"automatic" with "semi-automatic".

I have an AR1000XLT scanner for sale. It is in pretty good condition and has many features, such as:
500khz-1300mhz (absolutely no gaps, so yes that means cellular)
1000 channels
Selectable AM/FM/WFM Modes
10 Programmable Search Limits
Triple Conversion
VFO
Antennuator

and there are others. Along with the scanner comes the antenna, belt clip, and a manual, but no ac adaptor. I used my Uniden 235xlt adaptor and it charged it fine. I've seen average prices between $229-$259, but I will sell the scanner for $175, which includes shipping and I don't mind what kind of payment. E-mail me if you are interested. Thank you. Jerry

I loaded the software last week and began trying it out. It took a bit to get it up and running with my port, but once I figured it out, it was a "no brainer". Obviously the software is free but the cable is a hundred bucks (well worth it). I bought mine from a trusted person that I have been doing all of my radio purchases through since 1984. Scanners Unlimited in San Carlos, California. Ask for Glen (the owner) (650)573-1624..... Also the 8200 is a MAJOR improvement over the 8000, as well as scanning faster, the features will blow you away. Glen will tell you I am a radio addict and have owned probably more models than just about anybody out there. I change often (as my wife says it is a good thing it is only radios I get tired of). I think I will be satisfied for quite a while with the 8200's capabilities. Good Luck

So far so good with the Sony, I love the fact that its computer controlled (as well as manual) but its a little hard to get used to. I like the fact that you can pick up TV, Radio, CB and all. The sound is good and the radio with stock Ant. is very sensitive. Strongsignals has a good review

I ran across this same link a while back while trying
to find out information regarding Bill's interface.
I can understand how Bill came up with the name
COMMtronics Engineering + RS-232 interface
= CE-232.

But East Coast Datacom + RS-232 doesn't equal
CE-232. ;-)

I also thought the R10 would make the greatest rcvr.
But in reality the HF coverage is only a frill. Tuning with
a little detented knob is a pain. The narrowest filter is
15KHz wide, so SWL is hopeless. Battery life stinks.
It was designed to a scanner.

Sorry to burst your bubble, but the dream wideband portable
is yet to come.

Charlie, how can you be so MEAN? After all, you are the one who pointed me in the right direction with regard to Mackey.

All this time, I though this was simply another trademark usenet flame war. I had no idea that poor John Mackey was actually, in the clinincal sense, a complete and total moron. Now I feel so bad that I tried to force logical thought upon him. Can you imagine the strain it must have had on his poor thought processes, trying to figure out that LoginName@Domain.Name = a valid e-mail address? Again, I have to offer my profuse apologies to the poor soul <please forgive me, Mr. Mackey> for not realizing that he is a truly intellectually challenged individual, and not just another usenet trouble maker. I now understand the "circular logic" that others here have accused him of trying to use. It is simply the poor guy's whole outlook on life. Man, I feel so guilty about the way he's been treated here. We should all beg forgiveness from the Patron Saint of Idiots (which ever Saint that may be - anyone know?) What say we call this be kind to Poor John Mackey week?

Thanks for listening.

The data that you are hearing is called Weather Fax. It is composed of sattelite pictures and such. Some of the Ham Radio Packet mode TNC`s had the capability to decode it. It is in another format from regular fax.

>worked and not the "text-book" world....

In the real world with hand-held radios and aircraft radios, both
polarizations are often present. However, the real world also has a
great deal of vertically polarized activity, such as paging
transmitters, or mobile radio transmitters.

I've used real antennas in the real world and measured real
differences in signal strength in excess of 20 dB.

In a typical joe six pack installation, with antennas close to roof
lines, patterns get skewed and polarizations get messed up due to
coupling with other nearby metal objects.

However, those effects are things most people will want to minimize.
And as soon as you do that, the polarization issue will rear it's ugly
head at you.

Been there, done that.

Hello,

I am trying to decode some digital data that is broadcast over our local continuous weather station on 162.475 MHz. I am unable to find out the kind of data that is being sent.

Would anyone in this newsgroup be able to determine what type of data is being heard if I e-mailed them a .wav file of the sound? I feel that if I know what type of data it is, I could find some software that could decode it and put in in text form.

I thank you in advance for all your time.

James

>conversation is illegal under federal
>law.

You'll have to show me this law. The Privacy Act says that if you use a wireless device you must be aware that you have given up your right to reasonable privacy. A quick check with our in-house lawyer confirms this.

Plus I have personal experience. While listening to a neighbor buying drugs over the phone I telephoned the police who listened to the deal by me holding my scanner to the phone. My neighbor is now in jail and the police will only say they acted on an annonymous tip. I asked the cop if what I was doing was illegal and they told me no, not in any way. The way they described it was that if my neighbor puts a radio wave in my house, why can't I listen?

Mine only does that when I am in an area that isn't receiving the signal good and it looses the lock on the data channel. As soon as it picks it back up, it starts trunking again. That hasn't happened often. Only when I go out from town.

Dave

Wanted to buy: An Optoelectronics R11 test receiver (or similar unit) and any useful antennas or filters.

I'm looking to get into scanning and this seems like a east way...

Please email jcomand@mit.edu.

Thanks,
Jason

Oh, please. You've been posting garbage like this for at least
a year, and probably longer, Emilio. None of it ever bears up to
scrutiny. The 'net doesn't forget.

> Yes Emilio Come back again.

No, Emilio, go away and leave us alone.

Pete.

3390. DX390 Shortwave/Clearance at Radio Shack $69.95 (orig$219.95)

Newsgroup: rec.radio.scanner
Date: 1998-11-04 00:00:00 UTC
From: Eric Meyers <hcs77@gs.verio.net>
Message-ID: <01be0826$e8e5b420$4a5270ce@default>
Source record: 139351

"radioactive" in the (rec.radio.shortwave) reported
that RS has put the LARGE DX390 shortwave radio
on clearance as of 10/29/98 nationwide. I checked it
out and sure enough they are. Now locating these
remaining is the chore. My local RS store didn't have
any left. They looked on the "district locator" for a DX390,
(cat# 20-214) and located one in a nearby city but
it was broken. They told me they would check the district
manager about locating one. Not wanting to wait, I went
home and pulled up RS website store locator at:
http://www.radioshack.com/locator/
and found a RS store over the state line. They looked
on their "district locator" and pulled up several radios at
stores back towards MY direction. A quick long distance
call is all it took. This morning I drove 45 miles and saved
$150 on each radio of the orig. '97 catalog price!!!!
Now keep in mind that some of these remaining radios
might be store "displays". I bought two (for my brother and I).
One was a display and one was NIB. A few smudges and
fingerprints cleaned up easily. Good Luck All......

This DX390 is Great. Same as DX392 but without
the cassette. I must say that I have always missed
out on the "GREAT" clearances. Not this time!

P.S.
RS stores can have items transferred between
stores, even out of their district.

If I were a cop in my town, and you were speeding in a school zone, and was distracted by watching minor girls playing, I would castrate you on the spot, then book you for everything under the sun...

You got off lucky.

do you think that when the cops know something "big" is about to happen they turn off the ctcss codes that prevent the scanner from picking up any id numbers? the cops are trying to stop us from listening, after all!

900 MHZ BAND FREQUENCIES

Many of today's 900 MHz cordless telephones offer digital encryption
or spread spectrum technology. Either of these systems will render
the reception of the conversation by an ordinary scanner impossible.

Taken From Panasonic KX-T9000 60 Channel Model

Base: 902.100 - 903.870 Base frequencies
Handset: 926.100 - 927.870 Handset frequencies

(30 kHz Spacing)

CH	BASE TX	HAND TX	CH	BASE TX	HAND TX	CH	BASE TX	HAND TX
01	902.100	926.100	21	902.700	926.700	41	903.300	927.300

Which one should I buy?

I just saw RS had the Pro 91 on sale for $169, but then I looked
at the 235XLT and it has 300 channels for $188 on National Electronics
homepage! What other models in this 300 channel $200 dollar range
are there? Thanks for the information!

Source record: 139364

Would like to hear a few opinions from anyone who has the new AR-8200 and is using it w/8200 computer interface and/or accessory cards. Looks like a very nice scanner and I am seriously considering the purchase. Is it a fact that if you buy direct from Javiation that the scanner comes unblocked? That's not important to me for cell phone monitoring, but sometimes public safety in my area uses a portion of the 870Mhz range and it would be nice to hear that. I had the AR-8000 and was impressed with everything but the SPEED of the scanner - is there an improvement with the 8200? - and the sporadic shortwave reception. Thanks in advance, guys!

If you don't like it in the USA leave! BTW we don't want you in Canada
either...

3407. May sell my 2010... thinking of an IC-R10. Good move?

Newsgroup: rec.radio.scanner
Date: 1998-11-04 00:00:00 UTC
From: "E.A.R.S." <swl@monitorusa.net>
Message-ID: <3640D3D2.C8D79648@monitorusaandsillycompanies.net>
Source record: 139368
Cross-posted to: rec.radio.scanner,rec.radio.shortwave

The reason for the cross post is because the radio in question is both a scanner AND a shortwave receiver. That radio being the Icom IC-R10 handheld which covers darn near DC to light.

Here's my thoughts: Since buying a Drake R8B receiver recently, I've found that I no longer use the Sony 2010 in the shack anymore. (Incidentally, I absolutely LOVE the Drake! Still miss my C-Line, but that's another story.) Yet, I did like the Sony for taking camping with me and using its battery power to listen to my favorite SW stuff. That, in addition to my FT-50R handheld, gave me some pretty good spectrum to listen to while deep in the woods. I have found that I pretty much leave the FM handheld on my crossband repeater though, so scanning isn't done as much as it could be.

Ever since I saw the Icom IC-R10 handheld in QST magazine, I can't seem to stop thinking about getting one. I just couldn't really justify it, though, since I already have the Sony. So, my questions are these: How good is the Icom rig? How much can it REALLY hear on HF with the duckie antenna? Does it scan fast enough for serious V/UHF work? Is the SSB any good? What about batteries... do they last more than a couple of hours? Is the audio OK for such a small unit? These and other questions plague my addled brain whilst mesits and listens to Pink Floyd -- Dark Side of the Moon. wOoOoOoOoOoOOoOoOOooo

In other words, if anyone has one of these neat looking units, please let everyone in the ng know how you like it. I really don't recall seeing anything here about the rig in the past few months.

Thanks! 73,

de swl

From: anime@crosslink.net
Message-ID: <71qn0u$6u6$1@nnrp1.dejanews.com>
Source record: 139370

I'm looking at buying a cordless phone soon and was hoping I could get some recommendations on which are the best. Basically I'm mainly looking for clear reception even over range (I'm only really going to use it around the house). It must have these features:

900 mhz digital spread spectrum
Digital answering machine
Hold on handset
Caller ID on handset

With recommendations please give model numbers in addition to brand name. I've been specifically looking at the Sony SPP-A967 phone. Any opinions on it?

Don't have time for involved discussion, but don't think the R-10 will solve all your problems. It Can't hear squat on HF with the rubber duck. The RS Extendable Ant is pretty good. UHF and VHF great on duckie.SSB Good Battery life fair to poor, I use Metal Hydrides which helps a lot. Use the FT-50 and go buy a Sony 100 for everything else!

There are a number of satellite frequencies in this area. Some of the big
Geostationary satellites like GOES 9 transmit WX info, etc. around 401 MHZ.

Don't worry about it, it's a pretty crappy doctored photo of a
darkened 235xlt. The designer modified a couple button labels and the
actual radio name also. The key here to note is that this is a HOAX.

Hello

Here is the log for today's night.
Strong signals and easy to understand communications as usual for
this area of the world.
New aircrafts for me including a LTU A330.

The radar view of the airspace as it was when doing the log is at:

http://www.geocities.com/SiliconValley/Lakes/9420/shotex16.gif

Hope you enjoy the post.

Best regards, Andre Brandao

I found some info saying it could be done, but after disassembling
mine, I noticed the transistors were not the same as the
schematic. Also the ones that were there were covered with a
sealer and doesn't look like you could get to them if they
were the ones. Transistors q205,206,207,208 etc were not there.
If you have an older one it is possible. I don't have the date codes
for this. Email me if you need more info.

different from the old ones. No q206-208 transistors(etc).
Also some transistors are covered with serious black glue.(to prevent
tampering I would assume). So, for now, I believe the answer is no.
Thats all for now,

G'day David,

Take a look at the source for your web page, see the
reference to the background image in the line of HTML
below.

The 'file:///C|/WEBPAGE/emergbg1.jpg' shuff should probably
just be 'emergbg1.jpg'. As it stands, the web browser would look
on the local C: drive for the image rather that on your web site.

Hope this helps,

Regards,
Steve

I'm looking for info on what is transmitting CW/NBFM carriers
on and about 400.1 Mhz. The signal constantly changes frequency
about a 5 Mhz range with a period between 1 to 2 hours. It's
hard to tell since there seems to be several sources. I think
I'm dealing with multiple satellites of some sort. The
frequency is registered to Orbital Sciences Corp and to the
NIST according to my PerCon database. To tune it I'm using
a PCR1000, CW, BW=3Khz, CF=400.1 Mhz, and a 4 foot outdoor
whip antenna. Then it's a matter of
waiting until hearing a changing CW tone - no more than 20
minutes. So can anyone give some more insight into what
this is? TNX

BTW I'm also interested if anyone outside the Dallas
area can receive this.

3438. List of the rec.radio newsgroups

Newsgroup: rec.radio.scanner
Date: 1998-11-04 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <71oren$lmn@news.Hawaii.Edu>
Source record: 139410
Cross-posted to: rec.radio.info,rec.radio.swap,rec.radio.scanner

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)
(rec.radio.amateur working-group)

I do hear it in the Netherlands as well (on an ICOM R7100) and I recall
having heard about this and listened to it before.
It clearly is a LEO satellite (system). The sat that I am hearing right
now has the same familiar doppler rate as I know of the 435 MHz pacsats.
I think you mean a 5 KHz instead of a 5 MHz range, and actually it is
about 7 KHz up and down from the center.

Again, you are caught in a lie John. You have been kicked off
of SEVERAL Fido echos. You may not be using FIDO now, but
you are still not allowed on several echos. If you post on
Amateur radio, HAM-SALE, SCANRADIO, and others, you will
be asked immediatly to leave, and the SysOp of the board you
are calling from will be asked to deny you access.

What part of that do you have a problem understanding?

>Another example is your denial of harassment you gave & your
>attempted interference of an election on the CB_Radio echo of
>fidonet.
Another lie. You keep bringing this up, stating that Marge had to
take action against me, and neither Marge, or anyone else,
remembers anything like that.

So, the two points you brought up are nothing but YOUR lies, as
I have proven that what I posted is correct. Shame on you John.

This usually means it has lost the data channel and is trying to search
for it again.
Make sure your antenna/reception is good first. If the problem
persists, it's probably a dud scanner. Go swap it out (if you can)

Chi,

You only get the manual. The ac adapter is extra(273-1663a)
for $20. Make sure the polarity tip is (-) on the ac adapter.

Snap!

Emilio, Emilio, I hear that you're not real-io
And that we shouldn't feel-io, sorrow for your plight.
But time all wounds, shall heal-io, I tell you, dear Emilio
And maybe if you squeal-io, the cops will fear your bite.

In commision of things shady-o, they up and took your radio!
All for gazing at a lady-o, Emilio, you cad!
So from the scene, you'll fad-io, The cops they aren't afraid o' yo.
And that, I think, put's paid-io, because you've been so bad!

Swan

Sounds like its Dead On Arrival. "PLL ERROR" indicates that the Phase Locked Loop, essential for the thing to receive anything is out of alignment, this may be for any number of reasons.

As the device is new contact your supplier and ask for a replacment or refund.

Yes, I own 8 of the Radio Shack Nickel Metal Hydride rechargeable, and I was also disappointed with using them. They just don't possess the staying power of the ULTRA Duracell's. I don't usually have the time to mess with the lengthy charge times necessary to properly top them up. Also they will still possess the limitations of occasionally requiring complete discharge before recharging, unlike Lithium Ion batteries, which unfortunately are not available in AA rechargeable sizes yet.

Sounds to me like MAlexder is a Bearcat or Radio Schlock scanner owner and is either jealous or just has a bad attitude. The 8200 rules and if you don't know it, you obviously haven't had the opportunity to use one.

Believe me, digital cameras have a legendary battery drain. I would just guess at least 3 times the drain of the 8200. Due almost entirely to the LCD screens in them. Always try to disable it where possible, or choose a model that allows you a "through the lens" type of shooting, like the Nikon CoolPix 900 or Olympus 600.

Point well taken. John was so "Special" that he even got to ride on the "Special Short Buss" to a "Special" school. He has proven that he can turn on a computer, but I don`t think he`s mastered turning on a scanner yet. At least he ain`t written anything `bout them that implies that he even knows what one is.

Hang in there John !!! Maybe one day you`ll get the "Scanner thing" going.
